I do the same thing. I repair radios quite regularly for the "theory challenged" extra class and other hams. I find it shocking that these guys have such little grasp of RF theory, yet have the cajones to put down otherwise technically capable people simply because they haven't mastered an obsolete skill.

The restructuring will be a boon to amateur radio. All of the arguments will
soon be forgotten.

I have talked to a ham who taught code in the army during WWII (that's
somewhere). He had more than a 50% washout rate in his classes. So I
simply do not believe your statement to be true.

Just look around at the next Hamfest. If that's a cross section of the US
male population I'll eat all my Collins gear. Not to mention a near total
lack of female participants. Ham radio is so near the toilet you can smell
it over the radio.

This is probably true, but coupled with all of the public service we are not doing and all of the help to the neighbor communication we shun because we piss them off with our TVI, we should be able to impress someone that a trained? bunch of nerds are necessary for the public survival. Go any better survival plan?

To All:
I am a former owner of a Hallicrafters SX-88 general coverage
reciever, (and boy was that a damn good radio). I was wondering if
anyone in this NG could tell me what happened to Hallicrafters, I mean
how did they go out of business?
Any thoughts?

This FCC action on restructuring kinda proves my point. ANYONE can petition for the FCC to change the rules. Quite a few people have been wanting the code removed and have submitted their wants and desires to the FCC. When the FCC issued the NPRM (Notice of Proposed Rule Making) a couple of years ago, the ARRL was caught in their own egotistical concept of what the hams wanted for rules and tried to stop the no-code tide with lots of counter proposals that required higher speeds of code for the upper classes. Thereby using the code as a discriminator. They did not justify using such a discriminator that offered no real advantage for the upper classes or for the service, so naturally the FCC rejected any such discriminator. Because of the international stuff, they had to have some code, so the opted for the 5 WPM, and the discriminator could be worked out with some technical test questions. I think the ARRL just screwed up in not cooking up some reason why code was a good thing for the service and more code separated the men from the boys.

I replied! And sent approx 5 pages worth explaining why we needed to maintain 13wpm and 20wpm code speeds. I sent a notice for proposed rulemaking about two years ago, calling for an expansion of the 80m extra sub-band down 25khz. When the FCC turned me down, they sent a notice about the licence restructering. I felt I had to make a comment about it. But they didn't listen anyway. CW IS still used for weak signal work Especially for EME, 160, 80, 6m 2m and so on. Also probagation beacons are used extensively on 10m and 6m. I'm pretty active in these modes. And found cw superior to most modes when conducting weak signal work.

Why would amateur radio die off now? It is just that someone finally
realized that a higher CW speed meant nothing. If you wish to use it
you still can...

No, but I would suggest that he know and be able to do mathematics
without thought (or calculator) to make him a 'real' engineer. Math
is the fundamental "mode" of all the sciences; it transcends language
barriers -- any two engineers any where in the world can communicate
their engineering ideas via math.

Do you see an analogy?

There are no instructions. Plug it in per the owners manual
for the radio. The OM also tells how to use it.

What is the point of having Amateur Radio if the entrance hurdle keeps
getting reduced further and further.

At this rate, it could become like FRS. Just buy the radio. How does that
jibe with the long and illustrious history that hams have had?

Hi,

I have the following radio for sale:

KE7NR's FT726R

This radio has the following items:

1. Owners Manual
2. Service Manual
3. 2m and 70cm Modules
4. Satellite Unit installed
5. Hand Mic with Dial Tone buttons
6. Built in switchable 2m and 430 preamps (ready for field day)
7. 1200 baud and 9600 baud satellite ready via din plugs
8. Split PTT line for 2m sequencer ready. (Has jumper for non sequencer operation)
9. 2m RX module has extra IF stage added for beter S/N ratio
10. Mods are documented and straight forward.

$500 plus shipping

Please post the EXACT AD that enticed you to purchase these items.

Did this ad state, "New Condition?"

Did the ad state that these cells came with a manual? (Personally, I
have purchased several similar cells, and NEVER expected not received a
"manual" for them).

Did the ad state, "As-is?"

> So, this means that with 22 hrs to Y2K, I have no battery power....

No - it means that you did not adequately prepare yourself. Waiting
until the last moment is not too terribly intelligent.

When you contacted HRO to advise them that the cells would not hold a
charge, what was their reply?

26. SWR problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-01 00:00:00 UTC
From: Rafffy Shammay <shammay@bigpond.net.au>
Message-ID: <386E71C5.1CD88FB6@bigpond.net.au>
Source record: 90250
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I had one of those antennae.

I found that the gap between the first and second sections (the one that has a solid tube plastic-like insulator) seemed to get black with dust etc. Cleaning it brought the SWR back.

Also, when I had first assembled it, the factory drilled holes were *NOT* in the right position. Measure everything again, step by step.
It's a very good antenna so it's worth persisting.
I left mine down when, after a storm, the mounting brackets had worked their way loose and allowed the antenna to fall, thankfully not on the neighbours kids!

The antenna is designed to sway through about 60 degrees in high wind, and it puts a lot of stress on the mounting system

Best of luck

If not knowing Morse code can dumb a person down, it must affect either
his IQ or knowledge. Just think how brilliant Einstein would have been
if only he had known Morse code.

OTOH, it seems logical to me that dropping the Morse code requirement
to 5wpm will have absolutely no effect on anybody's IQ or knowledge,
i.e. no dumbing down is possible because of it.

What illustrious history? A bunch of old farts talking mumbo jumbo about
their ailments and 5X9 and Q something something etc., etc.
Hardly qualfies as illustrious. When was the last time an amateur advanced
the electronic state of the art through amateur radio? I do believe it was
Art Collins back in the 50s perfecting SSB. For the most part from what I
can tell all the exaulted old timers do is open the Kenwood, Icom or Yeasu
box and start talking. Illustrious history my foot.

Brian says...
> I personally have no problem with the restructuring and welcome any new hams
> to the hobby. All that I ask is that we all obey the rules and, if that
> isn't the case, that rules enforcement become more stringent.

Well put. I believe that Emerson once said that, "the fault-finder will find fault even in paradise." Rules are rules. Those who have passed a 13-wpm and a 20-wpm test have two choices the way I see it: gripe about rules that they cannot change, or get on the air and try to remember that this hobby is about making contacts with new friends.

It is this business of "real" hams versus (presumably) "fake" hams that will be the end of amateur radio, not some code requirement (or lack of)!

Lastly, it is unfortunate that some "real" hams suggest that a 5-wpm requirement is no better than no code requirement at all. I speak for myself when I say this, but learning 5-wpm required more study time than increasing speed from 5 to 13!

Happy Y2K to all - I look forward to working ANY hams (real or artificial) in the future! See you on the air!

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $350.00 includes extra charger & shipping Unit Retails for $379.99

>1) Who said "broadcasts" of the type W1AW is doing are not legal? Not
>the FCC regs.

According to 46CFR97.3:
"(10) Broadcasting. Transmissions intended for reception by the general public, either direct or relayed."

Where this gets interesting is in determining "who" is "general public". I contend that simply calling "QST de ..." does not get you off the hook - that "all hams" is a pretty weak distinction from "general public".

As for the 5wpm practice, this surely is aimed at non-hams (except for the no-code techs, all hams have 5wpm under their belt already).

Not that I care either way, and I actually find the practice very helpful. I just think its a case of bending the rules to suit one's own agenda.

I agree with Jack - the restructure best thing to happen in some time.

Jack can contribute a lot - more so than the overly abundant "appliance operators" that we all share the bands (fill in whatever your preferred band is) with.

Let's face it - if we don't do something to make ham radio more attractive, in 20 years, the amateur radio service will vanish. Why? Look at the median age of hams today - 53 yrs I read someplace. What's amazing is how many are crying in their coffee bemoaning how they were somehow cheated...

Let's take the responsibility we all have (read the first section of Part 97) to nurture and educate the newly minted hams that will come along - and keep them from becoming appliance operator lids. New hams are like your kids - if you aren't involved, don't bother to teach them right from wrong, and let them go their own way, they'll get in to trouble, all by themselves.

Something I haven't heard in the pro/con is where was ham radio going before the restructuring? In the toilet, that's where. The number of new hams is running 10% of the dying ones and the wireless community is demanding a lot more bandwidth and of course, are looking at the ham bands for their finacial survival. There are 100 million potential wireless users and diminishing hams at about 400,000 now and potential or 100,000 by 2005. There will be no ham radio in 2006 unless this gets turned around. Face it people need internet on their wrist far more than they need to pass signal reports with Tibet.

Ah, but W1AW's transmissions are not intended for reception by the general public. Their transmissions are intended for those with interests in ham radio and Morse code and that is permitted by FCC regs. If you're contending that the general public is interested in learning Morse code then perhaps we should contact NBC and see if we can get 20 wpm code practice on prime time.

Most hams are so disagreeable that young people don't
want to be bothered. I got my first ticket about 12 years
ago, went to the local club, found mostly retired people who
did not not even want to talk to anyone under 65. So I keep
my ticket and don't use it.

I will admit that the FCC had an agenda of maintaining or better yet,
reducing its involvement in amateur radio, but that was it's only
"internal" input to the restructuring. The ARRL wasn't the only input
they considered and it was (so they claim) only considered as one of
some 2200 comments received on the NPRM. (Someone ought to use FOIA to
get them and publish them, before the FCC destroys the comments) The
arrogant ARRL is always "surprised" when someone doesn't follow their
suggestions.

A great singer once wrote 'these times are a changin'.
I think it is wonderful !!! Something needed to happen to keep the average age of the ham operator under 65. Any change is better than no change. 'No change' just gets old and goes away.
People's lives are faster, busier, more complicated than ever. People's attention span is about a day on any hobby. A hobby where it takes months of studying to achieve something is not going to last anywhere in this world today....

I'm not saying I agree with all this but let's face it, it is the way it is. Just think how much time you spend on the internet now that used to be on the airwaves. Everyone is guilty. We just need to deal with it and be happy.

Forget the call sign worries. Be glad to be a ham.

Subpart A-General Provisions
ï¿½ 97.1 Basis and purpose.
The rules and regulations in this part are designed to provide an
amateur
radio service having a fundamental purpose as expressed in the following
principles:

(a) Recognition and enhancement of the value of the amateur service to
the
public as a voluntary noncommercial communication service, particularly
with respect to providing emergency communications.

(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communication and
technical
phases of the art.

(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.

As you can see from item (a) the phrase "particularly with respect to
providing emergency communications." indicates it is an essential part
of our charter to have capabilities to enhance _emergency
communications_. Item (c) indicates we are to study both communication
and technical aspects. Item (d) is self-explanatory.

1. Some of us have or had privileges outside the band, and could use it
in an EMERGENCY. Don't expect me to believe you wouldn't want us to
report a felony in progress or potential disaster which might result in
the deaths of innocent people.

I don't support oob for regular use (users SHOULD buy proper radios if
they use them regularly), but I have more than once had an autopatch
fail or no one was on the frequency when there was a real time-critical
emergency. I would NEVER use oob without knowing proper procedure to
communicate with the agency involved, or having a member of said agency
present, or allow a member of said service to use the radio. Many areas
have "mutual aid" channels dedicated to such use, allowing users to
contact them off their regular working channels. (I am a former police
dispatcher, but still work in the public-safety business)

2. We ARE supposed to be an EMERGENCY BACKUP to the regular services when things go very wrong. One of the things that makes us valuable to the community is our having frequency-agile radios. If nothing else, I would think being able to HEAR on other bands is vital to our effectiveness:

a) I was recently at a site when a bomb threat occurred on federal property. I was able to punch in all the frequencies to scan them quicker than the agencies' personnel could figure out how to talk to each other. (they didn't know the national law-enforcement frequency set aside about 15 years ago!) Two cops who were hams were discussing the situation on the ham repeater because they couldn't on the public safety channels! This was out west, where ANY radio might be your ONLY HOPE. There are still huge areas of this country where you can't rely on one service (that includes cell phones!) being your only connection to timely help.

b) I helped EMA one night when a tornado took out the local PD base in another town. I had radios in the center which no one knew how to use because all they knew was ham. I was able to expedite a lot of needs because I could transmit directly to the resources without having to try to get through jammed phone lines or ask someone to relay messages. (I was a PD employee at the time)

3. Many agencies have wised up and realized they can't rely on their "private, no one else allowed on our channels" mentality when the sh*t hits the fan. Big disasters may require hundreds of resources to be coordinated, and the LAST thing the dispatchers need is to have to constantly relay messages between people who COULD be talking to each other DIRECTLY. Our PD finally bought radios with our surrounding agencies in them, and we ALL gained from being able to work together. Don't you think hams should be included in some way? Remember how using morse code saved the world in "Independence Day"? ;-)

4. If we insist on artificially isolating ourselves to being "hobby only" and not be there when disaster strikes, guess how long we'll be around when more pressing concerns need our bands? Don't forget, this has already happened.

5. Discipline and training are the main things needed here. I don't think anyone should use oob unless it's for the right reason, but not allowing amateurs to be capable of it is foolish thinking. Like anything useful, transmitters can be misused. The bad guys can always modify something or steal equipment to interfere. This is why newer technology like trunking, spread-spectrum, and digital encrypting are now considered when planning new public safety systems, because they are more resistant to jammers. Don't forget, there are enemies to communications that are both domestic AND foreign.

6. Bands have changed over the years. (2 meters used to be just 146-148!) We need to be able to re-program equipment when that happens, whether to expand or reduce our coverage. Don't forget some of us travel or even move to other countries where the bands are different. Should we

have to buy all new equipment for this?

You can bet there is usually gratitude when we save lives because of our talents with radios. But, if we have no idea what to do or how to do it, they'll find other resources to use. What would be the justification of us having BILLIONS of DOLLARS worth of spectrum if we are just "a bunch of freeloading hobbyists"?

Bottom line: nobody is going to make you reprogram your radio, but don't stop those of us who want to be ready "just in case" from being an asset some day. I don't have my radios programmed for oob TX because I don't want to inadvertently interfere, but I know HOW and can be ready IF NEEDED!

YMMV :-)

It sounds like many old Hams would prefer the Amateur band getting devoured
by commercial wireless so their "good name" will be preseved forever. To
heck to those who would like to enjoy it in a different way.

Source record: 90283

Hello,

I just purchased an HTX-10 10-meter rig from Radio Shack, and have made several nice contacts on it in the last couple of days. The output seems to be as advertised, at around 25 watts. My signal reports have been excellent, and the receiver seems to be quite sensitive. One comment I received from one contact was that the audio seemed a little too hot, so I turned down the microphone gain to about 50%, and he said that it sounded clearer. The output power did not appear to decrease according to my power meter in my trans-match, and he said that my signal level did not appear to drop.

Overall, this seems to be a good transceiver, and I am already happy with it.

Does anyone know of a web site or FAQ dedicated to this rig (other than the Radio Shack site)? I have searched the web, but found none. The manual is short on detail!

73, and happy new year!
-Joe-

No, but you don't have the right to put someone down because they don't
share your viewpoint of how things should be.

There's a difference between "liking" someone, and tolerating someone.
No one is suggesting that you give new a 5 WPM extra a big Barney hug,
but he is entitled to be respected as a person in spit of the fact that
he didn't have to endure the 20 WPM hazing ritual.

Anyone who is not willing to accept that things change, and be able to
move on, without sour grapes, and a refusal to show "good will" to
newcomers, IS a stuffed shirt. Again, you have NO right to prejudge
anyone, based simply on their perceived "worthiness" (in your opinion).
If they pass the required FCC tests, they are entitled to the privileges

as hams, as set forth by the FCC.

Bottom line: your opinion is irrelevant. The law is the law.

>
> Neither a license class nor a callsign will make you other than you are.

An open minded individual who is not afraid of change, and who welcomes
the modernization of the ham radio service, and who has little sympathy
for those who refuse to accept it.

>
> Strive to be mediocre!

Seems to have worked well for you.

Come back later when you can get past your opinions and look at the
issues objectively.

Dave

I picked up a pair of Midland 2M HT's, model 73-030. One works fine, the other is stuck working 144-146Mhz. The owners manual says to press the 2 Mhz keys (up/down arrows) to open the extended receive range to 136-173Mhz but nothing happens. The manual states this feature is used to enable the full receive and US Tx range from 144-148. Nothing happens.

Has anyone had this problem and know what the workaround is? Thanks.

Andy N3LCW

Realize YOU can change the rules...anytime...all you have to do is
submit your request to the FCC in the proper format and if it makes
sense, they will consider it and issue a public request for comments.
The FCC seldom initiates any changes to the rules, they are all
triggered by requests. There is also the path of appeal. I don't know
the procedure, but I will wager that an appeal will be made on this
restructuring order. I don't think it will go anywhere since there was
plenty of time to comment on the NPRM..but you will have an oportunity
to bitch to them (in a constructive manner)

The NCT was the result of "whining magpies". Guys like you didn't like
the idea then, so i find it rather curious that you are willing to
accept it now.

I guess it was easy to give someone a NCT knowing full well that you
could hide away on your HF CW segments, and not have to deal with those
"lower class hams". Now it's a little different. There just might be a
bunch of guys running 5 WPM on the extra portion now, and that would
really bore you "elitists". What are you going to do then? Will you
welcome them and try to help them build speed? Or will you shun them,
since they didn't pass the 20 WPM test? If they manage to work their way
up to 20 WPM, will you still think that they are not "real" hams?

Dave

True. But the DEALERS do !!!!!

Description

RELISYS DC3500 Color Digital Camera with 2MB, Flash, Memory and Self Timer.

This camera is an easy-to-use digital camera that enables you to easily capture images and immediately transfer them to your computer. This package
has everything you need, including software that lets you transfer your pictures to your computer and then edit, enhance and organize your pictures to
create personalized images to share with family and friends.

PACKAGE CONTAINS
Camera with 2MB card
Wrist strap
Soft case
Serial cable
Battery
Software on CD
Manual

FEATURES
True VGA Resolution
Refresh and Expandable Memory
Auto Dual Iris Control
Auto Flash Light
Auto Power Saving
Focus Free
Self-Timer
TWAIN Compatible

SPECIFICATIONS
Image Sensor - 350K pixels
Viewfinder - Optical
Resolution - 640x480, 320x240 pixels
Color Depth - 24 bits
Removable Memory - 2MB
Storage Capacity - 8 to 26 images (approx.)
Aperture - Auto Dual Iris f/4 - f/11
Focal Length - 6.3 mm.
Shutter - CCD electronic shutter
Shutter Speed - 1/30 Sec. - 1/10,000 Sec.

Focus Distance - 14 in. to infinity
Power - 3V Lithium CR123A Battery
PC Interface - RS-232C
Dimensions - 4.9 in. x 2.3 in. x 1.3 in.
Weight - 5.6 oz.

SYSTEM REQUIREMENTS
486 or Pentium processor or equivalent
Windows 95 or later
At least 8 - 12MB RAM
Hard disk with at least 10MB free space
256 color or higher display adapter
CD ROM drive

Should you require service or technical support please contact
1-877-625-2255.

Head in the sand and worrying about call signs when the whole of ham radio
is about to change. You guys just don't get it yet---IT'S TOO LATE TO CHANGE
IT. The FCC has made their collective decision and now we will have to cope
with it..

I'll try and not get emotional here now that I've had a couple days to
calm down.How is CW outdated? I just don't get what you mean by
that,especially when compared to AM,FM,and SSB in that order.
The first on the scene doesn't have to be the first to become
obsolete.
What modes do you think are not outdated?

Nope, not for a moment, Volfy. I've said it before, I have
never believed that it should be any harder than necessary
for anyone who wanted to, to become a ham.

I am officially on record as willing expose a large part of
the amateur spectrum to the forces of nonsense in order to
support that ideal. But not all of the ham radio spectrum,
as has just been done by FCC.
I sure hope your wife doesn't have problems tolerating
trash, since its almost a certainty we'll get a large
increase in that sort of thing within the ARS.

Talk to someone who taught code in the navy or somewhere and they will
tell you that ALL of their students made it to 20 WPM although some had
to take the 2 week course twice.
Many of the study materials are poor,like the ARRLs or W5YI,I used
these and was getting nowhere the got "Jerry Ziliaks high-speed code
course"and went to 23WPM before I knew what happened.
I must admit I sure hated it until I could actually follow a
conversation.
Many people are too lazy,too set in their ways or just don't want HF
PRIVLEGES very much.

There's an international treaty that makes that unfeasible at the moment.. 5 words per minute is the INTERNATIONAL minimum code speed for Amateur Radio below 30 Mhz. There are several nations who are looking to drop the code requirement altogether (the US is NOT one). The treaty is reviewed every few years and you may see the code requirements loosened further (eliminated), if and when the international requirement is dropped (...personally, I'd be suprised to see it dropped real soon... maybe 5-6 years away)

My point is this. Some of the guys out there just did not really want to spend the time or effort to pass the 20 wpm. If you are an extra, then you know that it takes some dedication to the hobby to be able to pass the 20 wpm test. It takes a genuine effort. I know too many techs who just did not want to spend the time to advance in the hobby. Now with the 5 wpm max, they can just about do what they want.

Bullcrap. I still think it takes a lot of effort to get to the
point of extra class. The first 5WPM is probably going to
be the hardest. If you can get over that then you deserve to operate
HF.

We all walk at different speeds; and some can't walk at all, so if one person wants to walk at 20 steps per minute and some only 5.They are both walking; does one add or subtract from the others ability?

The ones who can't walk have a place in the world too. They can do what they CAN do

It is not about technical skills---its not about the Me Mentality (I did it this way so all should do it this way). It is about change! The numbers of new hams have stagnated
to the point where the hobby is in jeopardy of losing band space (use it or lose it)

It is a shame that we can't be big enough to quit quarreling about trivial stuff and do
what's best for the hobby.

The above views are my own. It works for all aspects of life
Do what you can.

What I said was, the affidavit signatory was required to
state that he administered the code test. You said that he
instead called the other ham who "knew" that you could copy
the code, and clearly he would have signed the affidavit on
that basis, under your story (I know, you're sticking to
it). A violation that would have been acted upon by the FCC
at that time had it come to their attention. I'm sure they'd
have preferred not to know.
Counteraccusations do not produce accuracy, just more
attempts at muddy water.

> from Icom. That's about $4,000 Kenwood won't be getting.
> 73's
> Ken Bjorklund
> KK4BH

A great flaw in your logic - and one that is common to MANY similar items ("My damn Ford dealer screwed me over - so I fixed HIM, I bought a Chevy..."), is that the rig(s) you NEXT buy from a competing company will be better and more failure free than the maker you just fled from - not usually true!

Virtually ALL of today's manufacturers have a certain percentage of design flaws and failures - as well as service departments that ocassionally deliver less satisfaction than a customer is willing to accept. You stand JUST as good a chance of being pleased with your next Kenwood as you do with either Yaesu or Icom - it's FAR wiser to select a radio based on the *features* that best fit you, that by the nameplate - they will ALL fail at some point in their lives!

I, a LONG time satisfied Kenwood buyer, recently bought a new IC-746 because it included HF-VHV coverage unmatched by Kenwood... I'm on my *third* one - the first displayed problems out of the box, and was returned within a week - two others followed, and I have kept the third. So far I am quite happy with it - and my choice, even though Icom offered to refund my purchase price if I wanted. In MY case, at least the service department made up for an apparent design/production flaw...

BUT, my "equipment problem" didn't disappear just because I bought from a different maker!

Nor should a prospective buyer *assume* he will receive the same treatment from Icom service just because *I* did.

SO... tell me... where was the ARRL? Too busy running a publishing
house?

I'm sorry, I have not heard this issue discussed. You are somewhat
correct, I wasn't aware of what was happening though I was not 'holed
up' in the shack as you suggest but working in a 'holed up' shack
overseas.
Really now, how difficult is it to use the any of the blocks of the
three letter call prefixes available for the US instead of two (AAA-ALZ,
KAA-KZZ, NAA-NZZ or WAA-WZZ)---that's a simply administrative duty for
the FCC to implement---what, their computers can't handle it? No rule
changes required.

What an idiot. The first ham called the second ham to get him to sign off on the Morse code portion of the exam since he didn't have any way of sending 13wpm for an exam. The second ham had given me the Morse code exam six weeks before using a 78rpm record. Do you really think I had forgotten Morse code in six weeks? Presentday certificates are good for a year.

Dick:

International call sign allocations for the US consists of the following
blocks: AAA-ALZ, KAA-KZZ, NAA-NZZ and WAA-WZZ with the addition of
```

number and letter suffixes as required. Like I wrote in my post, for those in the majority who may wish for it the new call sign blocks can consist of a three letter prefix with the conventional call sign for example; AAA2AD or ABD3FYT. This capability has been in the system for decades---almost one hundered years. I'm surprised that as a ham for the duration you stated you didn't know this basic fact. BTW, your 'N' call is not old---it is new! My 'WB' call predates that by a goodly margin---similarly, an orginal holder of a 'K' call predates mine. Unfortunately, that was in the good old days before the FCC in their wisdom destroyed yet another important facet in amateur radio---sense in call sign allocations. I thought then as I do now that there is a bit of comfort in knowing the relative age and experience of the operator at the other end of the communications circuit besides providing a sense of continuity between the past and present.

I think the idea of a three letter prefix quite applicable. The FCC recognized the holders of the First Class Radiotelephone by issuing a special certificate to them when the deleted that license class in favor of the General Radiotelephone Operators Certificate. I think a similar situation is warranted for hams; as a generalization, elder and more experienced hams can help the newer and a special call sign to help distinguish the two groups/generations is indeed a useful tool.

That fact that achievement is institutionalized is an important and useful fact of life; for you to destroy this fact speaks interestingly of your attitude---quite possibly of your behaviour as well. If anything, less structuring will just increase the likelyhood of ghettoizing the ham experience---YEA... HOW BOUT IT BREAKER BREAK 19 C'MON DUDY DANDY!

You are entitled to your choice... maybe you can get the first 0 call in the new block; NNN0BK for instance or maybe AAA0BK strikes your fancy.

Sincerely,

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the ham radio QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $13
12 volt 7AH --- $14

I have only a few 4's but loads of the 6's and 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

I am considering buying a boom mike for my HF mobile station, rather
than using a hand mike with my IC706 (original version). My hand mike
up-down buttons are getting flaky anyway. I would probably put the PTT
& up-down buttons on the shift lever.

Does anyone have any experience with the Adonis USA - RF Limited
equipment? I could not find a website for them, despite searching on
several search engines. I discovered Adonis in the HRO paper catalog.

Any other brands that are worth considering? Should I try a throat mike?

I should note that I have been operating HF mobile for many years, and
prefer a speaker to an earphone. A speaker is probably better from a
legal standpoint as well, as Colorado Law prohibits driving with headphones.

>The should have completely done away with CW and eliminated any requirement.
>It is an outdated mode of communication that is one step above smoke
>signals!!!

Smoke, like VHF+, is just good for local comms. Perfect for the Tech
licensee. OTOH, CW on HF will enable you to participate in world-wide
comms. And as far as being outdated, the CW portions of the HF bands
yesterday and last night were jammed. SKN, you know. (But then again,
40m CW is like that every night.)

Jeff KH6O/6

104. FAQ: Plectron and Motorola Alert Monitor Receivers

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

----
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Jim et al ...

It is pretty clear from a careful reading of the R&O that the ONE AND
ONLY reason given by the FCC for keeping ANY code test at all is
that we have a non-waiverable obligation under the ITU Radio Regulations
to have SOME code test for access to bands below 30 MHz.

Absent that, I don't think we'd have ANY code test in the R&O since
none is necessary except to satisfy an outdated treaty obligation which
will most likely be removed in a couple of years at the next WRC after
the upcoming one (it's on the agenda for that WRC).

THEN the FCC will be able to say, "Look, we've had a NCT for nearly
15 years and 5 wpm for full access to HF for a couple of years now and
the world hasn't fallen apart. There is no longer a treaty obligation,
which
was the ONLY reason for keeping even a 5 wpm code test these last
couple of years, so we hereby eliminate Element 1 (the code test) and all
references thereto in our Rules."

Until then, we've made tremendous progress.

73,

On the other hand...I have been an amateur advanced class op for about 15 years now...and I can for one say that this should give some of the young blood some incinitive to really get their licences and get on the air. I haven't really worked cw for years now, but I can forsee an upsurge in interest in the mode, since it will become somewhat an interest in those that no longer view upgrading to higher cw speeds to get on hf. As for me...I am going to get some study literature and try for my extra licence even though it won't have the prestige (anyone for an friendly argument here?) it once did.
The times they are a changin'.....

Er, pardon me ... I think you meant the "non-SSB/SSTV digital bands." I
am not interested in the code, but I expect to soon be doing some
interesting
digital stuff in what your erroneously refer to as "the code sub-bands."

It's called progress ... live with it.

Actually, the last part of that is untrue. The ITU Treaty/Radio Regulations
are
completely silent on any speed requirement. The FCC *could* have set a
1 word per fortnight code speed requirement and been perfectly within the
Radio Regulations/Treaty Requirement. But since 5 wpm was the lowest
existing code test speed and has already been accepted by CEPT for granting
US ops full HF privs in CEPT countries, they went with 5 wpm for now.

If you read the R&O carefully, the ITU Treaty/Radio Regulations are the
ONLY reason cited by the FCC for keeping ANY code test.

>There are several nations who are looking to drop the code
> requirement altogether (the US is NOT one). The treaty is reviewed every

Consideration of S25.5 ... the section of the ITU Treaty/Radio Regulations
which required Morse tests (at no specified speed) for licenses granting
access to the bands below 30 MHz is on the agenda for the next after the
upcoming WRC. There is a great deal of international support for
eliminating
the Morse requirement from the treaty entirely and it is expected that it
will
be eliminated upon consideration at the WRC

114. Re: Amateur Restructuring Announcement - FCC screws Ham Radio!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-01 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <386E5AB4.B4C11DFC@dimensional.com>
Source record: 90338
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Hey guys,

This rather worthless and futile thread is being cross-posted to the
following groups:

rec.radio.amateur.antenna, rec.radio.amateur.equipment,
rec.radio.amateur.misc,
rec.radio.amateur.policy, rec.radio.cb, rec.radio.scanner,
rec.radio.shortwave

Could we possibly confine it to the policy and misc groups? All you
have to do is edit the address list when you reply and delete the
inappropriate groups. After awhile this crap should then disappear from
antennas, equipment, etc.

Thanks and 73,

Marv
AB0IO

"We" are, huh? And everyone who holds a differing opinion is an "old
fart". You are just as I supposed you to be.

> As far as I'm concerned, ham radio is much better off without guys that
> cannot accept people for who they are and not what class of license > that they hold.

Dave, there is no moral nor any legal requirement for me to accept
anyone for who they are or what they are. I never had any problem
accepting anyone because of amateur radio license class. I'm not, on
the other hand, obligated to like someone.

I sincerely hope that this FCC action causes a lot of old
> stuffed shirts to sell all their equipment and throw in the towel. More
> room for the rest of us, that truly want to see ham radio progress, and
> who don't have a close minded, bigoted, and predjudicial attitude.

Again, anyone who holds a differing opinion from yours is a stuffed
shirt who should leave amateur radio and leave room for "us"--those who
"don't have a close minded, bigoted and predjudicial (sic) attitude".
You are just as I supposed you to be.

Neither a license class nor a callsign will make you other than you are.

Strive to be mediocre!

Well that is a tough question to answer. I have been collecting tubes =
for well over 30 years. My first one was a WE 215A that came out of a =
surplus store on Cortland ST., NYC. I Just thought is was neat and it =
appealed to me. I did not get it to start a tube collection. My second =
tube was a brass based and tipped WD-11, new in box, given to me by an =
old time ham when I was in Indiana for College, who is since an SK, but =
at the time was probably younger than I am now. Well, I had another =
friend who was a tube collector and he really wanted that WD-11. So, he =
traded me 2 pretty scarce tubes for it. That was it, I was hooked, from =
then on at every hamfest I looked for tubes. They were an ideal =
collectible as they were affordable and did not take up much space. =
Well, now, over 30 years later and with about 200,000 tubes in the =
basement with all the other junk what can I say. I started collecting =
due to the appeal of the technology. How can you beat a device where =
all the active elements are shown and can be explained. There are still =
a few tubes I would love to add to my collection, but not many. deForest =
audions, Fleming, White, Weagant and Round valves are pretty common. But =
I sure would like to have an LRS relay, or the Russian tube shown on the =
cover page of the OTB several years ago. I think, to start with the best =
tubes to collect are the ones where you can actually see the =
filament/cathode, grid, and the plate. Then go from there. Good luck =

Dick Carroll >
> Does this mean that in all your education, you learned
> nothing of importance outside your chosen field of
> employment?

No, it means I pick and choose on what I spend my precious free time. I personally would not spend 100hrs handbuilding ham gear which does 1/1,000th the capability of a store-bought $700 radio is a big waste of time in this day and age. Yet I respect those who find such endeavor rewarding. To make tinkering a prime directive of HRS, however, is turning a blind eye to reality.

> Actually, it looks like the price of good used ham gear
> just took a steep upswing.

And the price of new ham gear just took a steep down swing.

Ahh, there you go with the "holier than thou" attitude again. Spare me the sarcasm. If you really want to compare, let's compare our achievements (work&play) up till my age and see if you can really hold a candle.

No, you seem to be really fond of saying that, though.

I said what I said, and it's right. Now most of them will probably find ambition enough to learn 5wpm, since the 'return' is the whole farm.

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the ham radio QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $13
12 volt 7AH --- $14

I have only a few 4's but loads of the 6's and 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

I have seen "real hams" that don't know anything about radios and how they work. We a "real ham" that give signal reports on a 2M repeater. This same "real ham" can't understand why people can't hear him off the side of his beams. CW was originally meant as a means for communication between machines. They should have left it that way.

"Advance amateur radio's state of the art" - of all the laughably outdated directives I was forced to memorize, this one takes the cake.

This may be true in the old, old days when the typical ham build his/her own rig out of cereral boxes and coat hangers. I hold a BS in Mechanical Engineering and a MS in Computer Science, and I just got my first ham ticket. My plan for advancing the state of the art involves stopping by Texas Towers and picking up a brand new Yaesu FT-847.

Wake up and smell the surface mount device, old timer.

I am a Extra and glad to see the code go to 5 WPM . Code has nothing
to do with making one a better Ham. All the code did was make some
think they were better than the rest because they had the ability to
pass a 20 wpm code test.

Since you brought the wife into this:
It took a lot of persuasion on my part to convince my wife to learn 5wpm with me and try for her Novice ticket. She is studying diligently for the written exam with zero technical background. She barely passed her college graduation math requirement a couple of yrs ago. Her engineer husband helps out as much as possible, but she admits some sections are just way too difficult for her so she may have to memorize those questions.

We both welcome the FCC announcement with excitement, as it may potentially help ease her uphill battle.

Some of you might commend me for introducing another person into the Ham world. Others, as plainly evident in these discussion, will be openly scornful of my attempt to dillute your supposed exclusive elite ranks with a techno-idiot. Ask yourself, which side are you on?

I have a TH-G71 too and I have never had a problem with it. What I would do is check to be sure the battery pack is really charged. If it is then there may be a problem with a cracked solder connection inside where the battery connections to the main circuit board are located.

The should have completely done away with CW and eliminated any requirement.
It is an outdated mode of communication that is one step above smoke
signals!!!

And you believe the small booklet study guides prepares the potential driver better than the test method used by the FCC - that it covers all the information that the driver needs to operate a vehicle? Those people are driving a vehicle that has the potential to kill people.

However, my main point, Dick, is that the ham license test is not a final exam that proves your knowledge, it is an entrance exam into the world of hobby radio. You not supposed to know everything when you complete those tests - your supposed to learn about this hobby radio after you take the test.

That was the intent of the FCC when designing those tests, and those tests serve that purpose well.

Yet another fine example of the hams waiting for someone else to do their dirty work. This item isn't new and if 500,000 hams had written (if that many can write in complete sentences) the FCC, this would have been put to bed long ago. All of this bickering is the exact reason I no longer participate in amateur communications. 30 years of enjoyment, but no more. I said it before and I'll say it again, the hams are their own worst enemy.

Misinformed as usual, Dick. The code exam could be administered
by a general or higher and the written exam could be administered
by anyone who was at least 21 years old. The written exam could be
administered on a different date at a different location by a
different person. Please get your facts straight before accusing
someone of illegal actions.

The FCC wisely did not do away with CW. It still can be used on any
HF ham frequency. It is still a useful mode for a lot of hams. Why
do you want to take that away? Doesn't that make you just as bad
as someone who wants to force you to learn Morse code? What
is wrong with live and let live?

Recently, several hams in the Yaesu MP reflector have reported problems with the display on their MPs saying it takes from several seconds to several minutes before the display will brightens enough for them to use the radio. Evidently, the problem radios range from early production models (a few years old) to recent production units, manufactured just a few months ago.

More than one of the MP owners have called Yaesu to discuss the problem, only to run into a solid wall of denial on Yaesu's part. They've been informed by Yaesu techs that "no such problems exists" - "no one else has reported any similar problems" and "theirs must be an "isolated instance"". EACH has gotten the same story.

Yaesu, Kenwood, Icom and the rest of the ham equipment manufactures are aware of these news groups, and know that hams (more than any other group) LOVE to discuss their radios and equipment. If there's a problem with a rig, it won't be a secret for long.

So, what's up Yaesu? Are you going to own up to your responsibilities, or stiff your customers on repair costs for something that is obviously a manufactures defect?

John

The FCC should have eliminated code entirely and made it an elective mode.
Code is as outdated as smoke signals!! They just don't get it!!

After reading the multitude of post regarding this issue, this is my opinion of the whole affair.

There will be a top heavy number of Extra Class Operators. (Just took the test after a weeks worth of intermentant study and passed with an 80 %).

There will be a fight for 1x2, 2x4, 4x6 or what ever the "designer" call sign pattern is in vogue at the moment. Why you might ask? Because this is America and being one means you must possess the "look and feel" of having made it in life. If this was not the case then vehicle leasing programs so the average Joe or Jill could buy an overpriced SUV or luxary car would unnnecessary.

There will be eventually restructuring of band assignments, and CW, Digital and other forms of non-voice communications will be squeezed into very small bandwidth. Maybe CW will die off, which will make the dye-in-the-wool anti-CW supports very happy.

One CB-derived person commented on other Hams picked on him and his kind for being bad operators therefore not welcomed into Ham Radio ranks. All I know is 2 meters and 7.258 MHz which in the 1970s sounded ham oriented now sound similar to the "trucker only" outband channels on CB. Especially 7.258 MHz during the day, I tried using MIDCARS this summer for the first time on a mobile. I was not welcomed during the afternoon because of not driving an 18 wheeler, sure they are a few old timers on MIDCARS from my youthful days in the 70's but these guys are a minority now.

The bottom line is this Ham radio will grow but, the technical experts are not going to come in droves. Computers not Radio are what the technical experts crave these days and you take no tests (other than for you BSxxin college). Remember money talks and BS walks axiom. The logic behind this statement, as supported by both the FCC and ARRL, is flawed. Ham Radio is a consumer oriented hobby bottom line, just visit your neighborhood Ham store. There is very little "home brew" rigs for sale, and I do not mean kit built homebrew either.

Lets face it everyone involved in this decision has a hidden agenda or financially motivated goal. The facts to support the changes were created to meet the situation at hand. The die is cast and we are about to go into production, so hop on the bus and go for the ride. What is certain is things (or is it thangs) are are going to change.

Howdy:

I am very concerned that I haven't heard or read of any discussion regarding call sign formats for amateurs licensed after RESTRUCTURING.

I propose something like a three letter prefix followed by a number group----for instance, KOP followed by the last four digits of their social security number or zip code perhaps.

Seriously, this historic change to amateur licensing should not ignore a subsequent change to appear in manner of call sign issuance. I sincerely feel that those amateurs who made it the hard/old/traditional... way should enjoy that fact---at least for the duration of their amateur career, by having their call sign identifier separate from those of future amateurs for the sake of tradition. Honestly, I think a conventional call sign with a three letter prefix would serve this function nicely.

Sincerely,

Jack I feel your pain!!!
I learned and passed the 13 wpm code requirement only because I had to so I could upgrade to use SSB/Voice. Go figure why I had to prove I could copy code since all I wanted to do was use voice modes???? Makes a lot of sense to me......not!!!
Here's hoping you're able to get back on the air soon.

Well I don't consider myself a kid and this is the best thing to come down the pike. Probably a lot more HF, VHF, UHF and Microwave experience that you will ever have as a ham.
I guess I'm lucky, I've had a TECH ticket since 1951, took the code, took the General Class written, held a Radiotelephone 2nd Class with Ship Radar Endorsement. Then in the '60s I was transferred out of electronics to sales and PR. My licenses expired. Never worked CW in my whole life. Tried to pass the 5 WPM in the late '70s but couldn't pass it, never could get it back. Now at 69 years old maybe I can get my license back again. Oh yes after I got my Tech lic. I tried to go to 13 WPM never could get that either. Worked for AT&T and Public Safety for many years as a Microwave Engineer and Communications Officer. I think I'm qualified to have a General Class. Like to hear some comments. By the way I still have copies of all my expired licenses.

John,
I can relate to your posting quite well. It didn't have to do with Yaesu, but with Kenwood. It is my belief the best way to handle this type of problem with a manufacturer who doesn't take care of his customers is to hit him in the pocket-book.

About 12 years ago I purchased a new TS-440SAT only to have it die after 3 or 4 years. After describing the symptoms to Kenwood they told me it was caused by a design defect in the use of a adhesive on the PLL Circuit Board. This adhesive attacked the solder connections making them intermittant. In other words, they were shipping "time bombs." Kenwood hid behind their 1 year warranty, making me pay for shipping and repairs, only to have to repeat these repairs several years later because the first repair wasn't properly done, and pay for it too.

I was a loyal Kenwood customer, having previously purchased several of their radios, but not anymore. In the last 2 years I have purchased a IC-706MKII, IC-2100H and a IC-T7H. Within the next year I plan to buy a higher-end HF rig from Icom. That's about $4,000 Kenwood won't be getting.

I'll add my 2 cents on this. I know a technician who took 2 weeks to get
13
WPM and got his general. I also know a technician who has been trying
to get 13 WPM for a year and could run circles around the general when
it comes to understanding the technical aspects of radio. My point is that
some people have no problems learning code while for others it may be a
difficult or almost impossible task.

It's like learning to play a musical instrument. Some people have the gift,
some do not. Code in no way determines who will or will not be a good
amateur operator. Code probably prevents people who would otherwise make
an excellent operator from getting into the hobby or upgrading.

Most of the people who are coming of age for HAM radio were not born in the 50's
and 60's.

I am 52 years old and until an accident laid me up for almost a year I had no interest
in ham radio or even CB. I chose ham radio because we all know the mess on CB. No
one who professes to like Ham radio wants to see it go the way of the CB. I am currently
a no code tech, but I will be taking my test for General before the 04-15-00 deadline. I
have had a hard time with the Morse code because of a hearing problem, but I will still try.

Change can be the most painful of experiences or it can a pleasant surprise. If Ham is
to survive then we all must be open to change. Those who are at the top of the Ham hierarchy who will soon be reduced to general are going to hate it.

I wonder if we will ever stop P+Moaning about what was and do what is needed to make sure our hobby flourishes. The choice is up to all of us

So this 40 year old information has what to do with anything? This attitude is the problem. "Things were fine 40 years ago when I started so why change anything." The last time I joined a club a couple of years ago (are you listening McHenry County Wireless Association in Illinois) they took my money but never added me to the membership roles. I wasn't quite 50 at the time so I guess I didn't quite meet the minimum age which probably averaged 65.

Look long and hard at the display. Its the most frustrating part of operating the rig to me. The unilluminated segments are WAY to visible, distracting from long periods of use.

QSK cw is excellent, as is the dual in-band rx.

Dual antenna outputs are very useful.

Dynamic audio available thru DSP.

Extra filters make the fully equiped rig almost another kilo-buck.

Noise blankers ineffective(both of them)

Fan runs alot.

Hetrodyne notch very effective, even on multiple tones.

DSP noise reduction mostly wishful thinking.

Poor record for reliability.

Should be more, but that's it off the top of my head. Mine went back under warranty for power supply failure.

And if we are lucky we will out number the fogies and have a lot more of us to talk to. Trouble is I don't have any ailments to talk about. Guess we will have to break HAM tradition and talk about something real like curent technology or something.

It works this way: VE's must hold an Extra to test others for Extra. If we can start a movement in which current Extras refuse to participate in the dumbing down of the "service," there will be no certified VE's available to test prospective new "no-code Extras."

Get it now?

184. Opinions about Yaesu FT-847 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-02 00:00:00 UTC
From: Pedro Pedroso <l38217@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.1000102225437.6039A-100000@alfa.ist.utl.pt>
Source record: 90052

Hello !
Im thinking about getting a transceiver for satellite and
V/UHF DX operation. Looking at the options on the market the
Yaesu FT-847 seems to "apparently" fulfill the needs plus
offering HF bands too.
I wonder if anyone who has already had quite few hours of
operation with this equipment can give me an opinion about
it. I'm particulary interested in using it on CW/SSB DX
operation on 50MHz and 144MHz. Is it a good receiver ?
Comparing with the IC-706 MKII , how is it ? anyone has
any problems (malfuncions) ?
All comments will be wellcome !

185. IC-756 Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-02 00:00:00 UTC
From: wr2m@aol.com
Message-ID: <20000102180834.03980.00001809@ng-cg1.aol.com>
Source record: 90053

I was wondering if it is now possible to memorize FM Repeater splits and pl encode tones to memory on the Icom 756.I owned one of the original 756's and at that time it was not possible to store six meter repeaters with different offsets and different pl tones to memory (Icom admitted to me this was an oversight). My old IC-736 did have 10 channels(90 to 99) reserved for this type of operation. This was a step backwards.

I operate Six meter repeaters that use a .500 offset, and others that use a 1 meg split. I remember the split offset was configured in the main menu setup, along with the pl encode parameters. But once you changed these parameters it affected what was stored in memory.

FYI ; A friend of mine has an IC-746 and it does not suffer from this bug.

I wonder if the New IC-756 pro will have this bug also ?

Thanks
Bill,WR2M

Source record: 90054

So, quite simply, the FCC will either test themselves, allow any amateur to test, or just eliminate Part 97 as worthless. You guys need to get a grip on reality. "dumbing down" has been going on for decades. There are some of you who wouldn't know a transistor from a digital coded squelch. The fact that you learned X amount of code does absolutely nothing for the hobby of today. It doesn't promote it, and anyone who listens for just one night in the HF bands knows that it is full of just as much idiotic behavior and morons as has two meters.

I would propose that instead of the current change, which is fine and at least is an action for change, that we make the writtens much more technical in nature, requiring full understanding of, oh, at least the last two decades of technology, and require anyone who wants, or WHO WANTS TO KEEP, their specific class to be retested by the end of 2000. I suspect we would have a lot more inteligent life on the bands and lose a bunch of the 35 year "extras/experts" who know so much more becuase one time, maybe 25 years ago, they learned some code. Time to learn Computer Code, data streams, and all the other stuff that will be the only chance of maintaing any amount of spectrum. Problem is, nobody really wants the HF brass pounder spectrum, just the spectrum above 50Mhz, so eventually all that will be left is Grandpa on 80 talking about social security, over, and over, and over.

The reason 220 was lost is that nobody was using it. Doesn't matter how many letters were sent or what they said it didn't change the fact 220 was not being used. Now you need to wake up and realize if more new HAMS are not coined the rest of the bands will go the same as 220. The future can go one of two ways. Your attitude will guarantee the loss of all bands.

Shoot you aren't a real HAM. You never ran a spark gap station. That's my criteria for a real HAM. Burn your license. Your not worthy of working the 10 meter novice segment.

Exactly right. They responded exactly, or at least a whole lot closer to the MAJORITY of the REASONABLE responses. Those who simply wrote in against the proposal because "I had to learn the code so they have to also" wasted a stamp. In an NPRM comments must be based on actual facts and possibilities, not emotional noise. I think from reading the r and o, they responded very well to the well thought out comments and matched my suggestions almost down to the date of implementation. My only complaint was why not issue new upgrades to those who have already completed the requirements, but, hey, a small problem, the important part was dealt with just fine.

The reason for the April 15, 2000 effective date is that all new
Rules must be published in the Federal Register and go through
some other bureaucratic mumbo-jumbo before they can take
effect.

The FCC could not have made the new Rules effective
immediately, so they cannot allow upgrades under the
new Rules because they aren't yet "the Rules."

Frustrating, agreed, but simple facts of life.

OK so we are all pissed off or overjoyed or whatever. Now what the heck does this have to do with antennas or equipment (besides all the good equipment that will hit the street when all the pissed off folks go somewhere else)

Quit spamming the groups that want to discuss real issues like making our stations better and our communications better.

It's a plan that will work only if *all* Extras are as vindictive,
selfish, and stupid as the person who proposed this.

Fortunately, they aren't. Many of the people who have been calling for
the elimination of Morse Code testing from amateur exams are Extras.

Besides, even if all Extras *were* like that, you don't think the FCC
would let them get away with it, do you? Any VEC who refused to test
applicants for Extra using the current Extra standards would likely
get stripped of their VEC status in short order. If this went on for
a while and there were no VECs left, the FCC could do the testing
themselves - but it would never come to that.

>>Perhaps they have a MARS or CAP license too?

>Have you ever seen anyone requesting out-of-band transmit info post
>their "callsign"?

I have seen someone asking for out-of-band info say that they had
MARS or CAP permits, and were prepared to send copies to anyone who
questioned that. Is that not sufficient for you?

For that matter, I have a radio that I have modified to transmit out
of band. I have used it as a signal generator, with the power going
into dummy loads. You will agree, I hope, that a signal generator is
useful for testing equipment intended for receiving only?

I have not *transmitted* outside the ham bands with this radio.

As for posting callsigns, this is Usenet - no callsigns are needed
here. If you're really interested, mine is VE7YDM.

Carl, Following your logic below, I contend that you are 50 years old and too
lazy to learn code beyond 5 wpm. Or, you are not intelligent enough to "copy
the code" in your head. Is this true?
I suppose I would give more credibility to a director of
"no code" international if he or she were a true, no doctor note,
extra class operator like me.

I contend that the CW element has kept many (not all) of the
low brain cell types off of the HF bands and hence keeps their
puke-brained jibberish off of the HF spectrum, where those
outside the USA might be subjected to it.

Just look at 2 meters -- most on there today dont know code,
and, are a laughing stock. They can't even speak properly
over a microphone. They basically sound like goof balls.

200. Ham Radio a Joke Now? ---no, be a tutor to a new ham.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-02 00:00:00 UTC
From: Joe <K7JOE@yahoo.com>
Message-ID: <386FF3B8.E405C8F4@yahoo.com>
Source record: 90068

More than anything, the experienced amateurs must mentor, coach,
tutor, and teach the newcomers....whether or not they know code.
There are plenty of lids that are on the local 2M repeaters, as
there are on 75 meters...why
are they lids? Because, about the time they were newcomers,
most seasoned hams got tired of the cb-type lingo, the Q-signals
on FM, and the bad operating. Instead of instructing, we turned
our rigs OFF. Or, when we did instruct, the new ham took it as a
personal attack against his "right" to use ham radio gear.

So what happened? The problem was never fixed to begin with, it spread like
cancer, and now has ruined the 2M band in most urban area.

As an amateur extra, wo can have a conversation in morse at
40+ word per minute, I think it makes me no better than the new
comer. The value of my license is based on what I personally get
out of the hobby, and what I personally put into the hobby. If
someone is using my repeater incorrectly, using Q-signals on FM,
refering to "first personals" instead of first name, I am quick
to correct the operating practice. Why? Because it cheapens ham radio, that's
all. If we wanted to be like CB we would simply be CB....

I would urge all who think their licenses have been "devalued" by the FCC to
take the stance of tutor. Dont let the newcomer with
improper operating practice "get by". Explain that amateur radio
is not a "right" it is a privelege. And, if we all dont operate
appropriately, that privelege can be removed for ALL of us.

Joe K7JOE (Amateur extra class, licensed since 1986)

> and too lazy to learn code beyond 5 wpm.

Not lazy, just not interested in jumping through irrelevant
hoops just for the pleasure of folks like you :-)

> Or, you are not intelligent enough to "copy
> the code" in your head. Is this true?

Back in my Novice and early Tech days (75/76),
there was a point where I operated quite a bit of
CW, working JAs, Johnston Island, and quite a
few countries ... I was probably about 4 states
short of QRP WAS on 40 CW if my memory
serves me correctly (I have the old log book buried
somewhere around here, but I'd have to look for it
to give and exact count.)

I found it tedious and boring and when I got involved
in VHF/UHF (repeaters, packet, satellite, DFing, etc.)
I rapidly lost interest in Morse code and stopped using
it. So what?

> I suppose I would give more credibility to a director of
> "no code" international if he or she were a true, no doctor note,
> extra class operator like me.

Ah ... so that's it ... "only 'REAL HAMS' (those who can beep
real fast) have intelligence, valid viewpoints, credibility, etc." huh???

Check my sig file for a smattering of credentials ... I've
been an RF engineer for over 28 years and have filed
about 20 good patent applications this past year, FWIW,
but enough of that ... I really don't have to impress you
and don't care if I do or not.

My sense of self-worth is not tied up in whether I can
beep fast or not and it's certainly not dependent on YOUR
opinion of me or my views.

> I contend that the CW element has kept many (not all) of the
> low brain cell types off of the HF bands and hence keeps their
> puke-brained jibberish off of the HF spectrum, where those
> outside the USA might be subjected to it.

The FCC disagrees ... they did in 1990 and they do now. Read
the Report and Order

(at http://www.nocode.org/articles)

... they even quote from the 1990 R&O to emphasize that Morse
proficiency has NOTHING to do with either technical proficiency
or behavior.

> Just look at 2 meters -- most on there today dont know code,
> and, are a laughing stock. They can't even speak properly
> over a microphone. They basically sound like goof balls.

With all due respect (which at this juncture doesn't amount to
much) ... sounds like the pot calling the kettle black to me.

Grow up and live with the changes. Try to do something
CONSTRUCTIVE to make ham radio better, instead
of carping about "Morse Myths" and other trash from
the past and trying to demean others who don't share your
interest in Morse code.

Might as well give up on your belief that Morse code skill is
worth something besides a tool for having fun. The FCC, the final
authority on such things, says it isn't. Sorry, you are going to
have to find another way to recruit worshipers. Carl will have
the same license as you before long, if he chooses to.

ALL? I heard a conversation about vertical monipoles for 160m
on 75 last night. I listened to a number of people talking about
various technical issues. I heard not one mention of SS. Not one.
I heard a 75 year old guy who sounded 30. Was one of the hams
talking about technical issues. I was shocked when he mentioned
his age. He didn't complain about any aches or pains and sounded
pretty sharp mentally to me. Said he looked forward to all the
new hams that would be comming on board in the next few years.
Apparently he didn't feel this would make his extra license any less
of an accomplishment.

So when I hear someone say ALL you hear is SS on
80 or 75M, my response is BULLSH*T. I believe what we really
need is licensing for UseNet access.

Hello, I'm looking for an HF radio.... Something like a TS570DG, FT900CAT, IC736/746, etc. Can't afford the $1200 versions, but could pay a fair price, if you have anything in excellent non-mobile used condition, please email direct and I'll consider!
thanks,
Randy

I guess I just don't grasp it. With today's technology, I just don't get the use for learning the code at such speeds. It seems to me that maybe some folks just may like the fact that it might have been a barrier towards inclusion on the other bands, because technically, it's not much of a "code" anymore anyway, when anybody can by a decoder. As an international language it holds its value, but the need to transmit it manually at warp speeds is beyond me.

I heard you on 10m ssb, and your raspy, over-driven
1500 watts on a band where 100 watts is plenty,
sounded pretty funny too. The part I really liked is
your "No kids, no lids, class A operators only......"
CQ. What an ass. Yeah, I really fell for the
"I gotta cold" excuse when the guy who responded
to your CQ mentioned your audio problem.

Think hard now Joe. You've never once used the Q-signal "QRM"
on a voice frequency? Remember Q-signals are for morse comms
not voice. Note even once? What did you use? I suppose
you said: "I'm getting a lot of man-made interference." Yeah, right!

Careful Dick, someone may notice how delusionary you are
and put you in a "rest home". If Carl so chooses, his
license will say "Amateur Extra" just like yours with
exactly the same privileges as you have. I can imagine
how that chaps your behind but might as well get used
to it. Time to bend your nose back into shape, do something
about your heartburn, and start having some fun with our
great hobby.

>So how do I know exactly what frequency the other ham is transmitting
>on? I know it has something to do with this zero beat thing, but what?

If you just want to know the frequency it depends on the transceiver. Many will factor in the offset, so if your at 800 Hz offset the rig will calculate and read the exact frequency of the CW signal. But not all do, so read the manual.

If you want to zero beat a station to work him on CW then the following may help.

In many modern transceivers the CW sidetone matches the CW transmit offset. Read your manual and see if this is so with your transceiver. If it is, then when the CW tone you're receiving matches the sidetone tone, you will be on his frequency when you transmit. (Zero-beat with him.)

If your transceiver has the CW-reverse function, where it can listen either high or low, if you switch from high to low while listening to the CW note, and the tone is the same, you will be on his frequency when you transmit.

Also some modern rigs have a spotting switch that takes all the tone guessing out of it, and simplifies things.

I'm guessing you have a modern rig. The procedure is quite different with older rigs, where the term zero-beat really does what it says...

I use one of these with my original 706. Very easy to build and worked right out of the box (after assembly, of course). It fits inside of the 706 but can be mounted externally. Good unit.

I think this guy is saying that the point of ham radio ISN'T the hurdles per se, but what they are supposed to represent -- knowledge about RF, communications protocols, band plans, and such. It is NOT supposed to be an exclusive club with long rituals requiring lots of effort but unfortunately that is what it has become (well, the club part anyway - and the previous hurdle of higher and higher code speeds for more voice privileges was just gratuitous, but served the desires of people trying to build an exclusive fraternal organization on a hobby whose reason for existance is based upon INCLUSION!).

And that is why it is under attack. And that is why the FCC revamped the licensing scheme to the minimalist one it is set up for: 5wpm test to satisfy the international treaties, and a bunch of multiple choice questions to do the rest. I would figure that it would have been better to have one pool of questions required to get the 50MHz+ certification, and another to get HF + the treaty junk (5wpm code). We went with 3 tiers, which is still a bit elitist, but hey, it is a move in the right direction.

Now, if there aren't increased numbers of hams, I would expect that more ham radio frequencies to be lost to commercial services - so people who are not welcoming of new hams, and try to be elitist about it and ignore, newbies are only hurting the hobby by this irrational behavior and indeed

threatening its existance!! If you want to have a club of old timers, elitist, requiring new members to do lots of rituals to become one of the gang, there are a lot of clubs and fraternal organizations out there whose very purpose is what you crave! I suggest you join them to get that aspect satisfied and then concentrate on making ham radio even more egalitarian and open than it is becoming! I'd love for ham radio to be in the position in 20 years of having the bands way overcrowded due to increased use (not loss of bands!) so we start experimenting with ultra-narrow band technologies to allow everyone to use the stuff!!

Yes, that is just what I was thinking. By having lots and lots of young Hams, losing lots of spectrum would be played as "the US destroying our technological wireless future" but with a small number of older hams and relatively few newbies, it gets played as a bunch of old folks complaining about losing an ill gotten benefit.

Right now, a lot of the interest is in the microwave bands - so I expect to lose most of that in the next 10-20 years unless we start using it, but with the damage we have done to the hobby by being so HF focussed (even to the point of requiring morse code at any level to get non-morse access for so long), even now, there is virtually no experimentation being done by average hams so no public benefit - and depopulated microwave spectrum - so that is gonna go pretty soon.

I have 2 G71's nice radio. The second G71 had a very strange problem, the transmit audio would take 5 seconds to come to full output on both bands. Sent it back to Kenwood and they sent me a new G71. That one worked great. Tech said it was a major problem, that is why they sent me a new G71.

So, send your G71 to Kenwood for warrantee repair.

Sean - K3XT

When you were a teenager and your friends did cw etc, they didnt have beepers and cellphones like the kids do today.
That is the difference, there are better ways to communicate now than amateur radio. Most young people just want to comunicate, the most efficient way possible, and ham radio isnt it. Ham radio will only attract those that want something different, something they did themselves, and have more control over. Times have changed.

Bought both types of adapters from Universal. Seem to be OK quality for about $5 each. Nothing wrong with SMA, it's just that they're 'new' and you'll get used to them - give a solid connection, very suitable for higher frequencies.

> Another unpleasant surprise was to find that I couldn't receive the WX

> about any other unfavorable features.

The factory can fax you the mod if you want, or somebody can just tell you. Takes about 5 minutes including dis/re-assembly. Pretty idiot-proof. That WX channel is one I have programmed in too. If you didn't get the 'H' version (same price), you may want to exchange before doing mod. You'll be glad you did.

> Then manual, like some others I've gotten, are not very

> of the learning curve, hi.

Yes, the manual makes anything but the most trivial of ops seem complicated. Actually much easier to do than the instructions make it sound, like lots of things are 'easier to do than explain'. Play with it for a few hours, then you won't need the manual. If you want, I have the manual on a single double-sided page in Word '97 that I could email you (for pocket ref).

And let's all see if we can continue to get rid of more people who would otherwise like to get into amateur radio. This way in about five years when all of the old-timer CW "you must do it this way because that is how it has always been done and I had to do it so you should too" amateurs die off (mostly from heart disease from over-eating, smoking and no exercise) we can lose all of the ham bands and be left with useless radios.

Yeah, good idea bud.

The VEC still has the option of making the test a little more realistic - get rid of the "multiple guess" tests! Fill in the blank, misspellings and all... that's the way to go. As a VE, I don't give the multiple guess CW tests...

Nonetheless, the restructure will keep ham radio alive by bringing in folks who have a lot to offer... perhaps these will just not have an affinity for code. More power to them.

I like CW - but not packet. So does that make me a packet hater? No.
Let's get ready to nurture the new hams and make sure they get the training needed to be GOOD radio amateurs, and not lids.

73,
Mike N5MJ

I'm retired, no longer commute and don't use this any more. The power
and the audio make it an exceptional unit for mobile use. A perfect
unit for Packet Radio enthusiasts.

This is a 45 watt high, 5 watt low, easy to program, 2 mtr transceiver.
It does not have optional TU-79 tone unit installed. It is in good
operating condition but has scratches on case. Includes manual, power
cord and channel up/down microphone.
Dimensions: 6 7/8" wide, 2 1/2" high, 8 11/36" deep Weight: 4.18 lb..
Original cost $379.00.
Asking $135.00 and I'll pack with lots of bubble cloth and pay to ship
in continental US. Please, money order or cashier's check only.
Unit may be seen operational, before buying, if you live near San Diego.

It is questionable whether the FCC listens to voters since none of the FCC employees are elected. Yes their budget comes from Congress but they are well down in the noise (and money) compared to some of the other players in the Federal budget. Amateur radio matters are even further down in the noise. The FCC's main concern is with commercial interests and major telecom issues.

Spencer: No surprise the FCC didn't respond, or listen to the wisdom of the thousands who filed comments. I have learned over the decades I've dealt with the FCC that when they claim to ask for comments, that whatever the comments are concerning is already a done deal. I doubt that they even bother to read any of them. I clearly remember the 220 MHz "band grab" several years back. 20,000 comments against, 2 comments for and both of them were from the corporations that proposed the grab in the first place. All wasted on the FCC, they took the frequencies anyway.

You've got it OM, let's go back to the good old days of Incentive Licensing which drove the US mfgrs out of business due to the glut of used ham equipment on the market when the old timers thought they were going to have to retest to prove their proficiency.

How many of the old fogeys could even pass the new codeless tests if required to.

Would probably rid the low bands of many of the "lids" ruining it now.

Heck, let's get back to the "Good Old Days" of Incentive Licensing.

Novices will upgrade to any higher class within one year or lose their Novice license and have to start over.

All technician class licensees and above will retest each year before the anniversary of their particular class of license was issued and if the test is not passed, will lose their current privileges and will revert to the Novice level of license with one year to uprade from Novice or lose that class of license and be required start over.

OH YEAH, the good old days which drove the bulk of American manufacturers of ham gear out of business and virtually stopped the growth of amateur radio in its tracks.

> thousands who filed comments.

Actually, as stated by the FCC in the R&O (and supported
by any reasonable analysis of the comments), they DID
"listen to the wisdom of the thousands who filed comments."

That the body of comment did not support your desired outcome
(which was apparently in favor of more stagnation, from your tone)
does not negate the fact that the FCC *did* follow its own Rules
and *did* consider the comments which were filed.

You have to understand that the FCC is not bound to follow
a "popular opinion poll of the incumbents" but rather to act
in the public interest. (Though the body of comment does
support their action.)

> I have learned over the decades I've dealt
> with the FCC that when they claim to ask for comments, that whatever the
> comments are concerning is already a done deal. I doubt that they even
> bother to read any of them.

Baloney ... one of the reasons this Proceeding took so long is that
compared to most Proceedings, this one had an extraordinarily
large number of comments filed. You can tell from the prolific
footnotes in the R&O that they were all reviewed and considered.

> I clearly remember the 220 MHz "band grab"
> several years back. 20,000 comments against, 2 comments for and both of
> them were from the corporations that proposed the grab in the first place.
> All wasted on the FCC, they took the frequencies anyway.

If the amateur community (and the ARRL) had not been so
intransigent WRT a no-code license when the FCC
proposed it (before the loss of 220-222), we might not have
lost it.

As it turned out, UPS, the company which originally requested
the reallocation of 220-222 didn't end up getting it anyway.

> > I replied! And sent approx 5 pages worth explaining why we needed to
> > maintain 13wpm and 20wpm code speeds.

Obviously your arguments didn't make sense to the FCC ...
they didn't buy all of the "Morse Myth" stuff ... in fact, the ONLY
reason cited by the FCC for keeping ANY Morse testing at
this time was the ITU Treaty obligation.

> > CW IS still used for weak signal work Especially for
> > EME, 160, 80, 6m 2m and so on. Also probagation beacons are used
> > extensively on 10m and 6m. I'm pretty active in these modes. And
> > found cw superior to most modes when conducting weak signal work.

NOTHING has changed in the Rules to prevent you from using CW
anywhere you could before ... all that's changed is that those who could
care less about Morse code are no longer going to be forced to pass
a high-speed Morse test to get phone and digital privileges ... something
that has been ridiculous for at least several decades.

The fact that some use CW (purely by personal choice and because
they happen to enjoy it, not from any real necessity) is not sufficient
justification for forcing all to become proficient at arbitrarily high
speeds.

The FCC made decisions which are in the best interest of ham
radio's future, even if you don't agree.

when you read the report and order you will see that the fcc carefully
chose a path through the comments that allowed them to justify what they
wanted. out of the 700 thousand or so hams in the US, there were only
2000 or so comments, about a percent or so, I guess they figured no-one
really cared.

The VX% is a good radio but I did not keep mine very long. I bought it thinking it had continuous coverage up thru 800 mhz. Unfortunately it is unusable from 225-about 320 mhz, which is where I do most of my listening. I had joped the radio could do double duty as a scanner but it can not. So I sold it and bought an Icom Q7A becuse it can.

Gary,
Your point is well taken. However, I find a flaw in your logic. I don't think it is very logical to put yourself into another position to be "screwed" by somebody a second time. Yes, it is possible to have problems with another manufacturers product. How well they handle resolving that problem will determine whether or not you made the right move.

I'd say it's several steps above AM, which occupies twice as much bandwidth as SSB and requires considerably higher power than SSB. About 95% of my HF contacts have been SSB, with maybe 3% CW and 2% RTTY. I've made perhaps half a dozen FM contacts on 10 meters, but wouldn't know whether my rig really transmits AM.

FM and AM are fine where high audio quality is needed, such as for music, but for communicating on the HF bands, I can't see why anyone would use either of them.

Correct. All those 20 WPM extras who were held hostage by an irrational
legal requirement they were forced to meet in order to obtain their
licenses, are now feeling nostalgic for it. :)

Can you think of any OTHER reason why they would have done
so?
Quick, get that super IQ to work and thinkup some catchy
answer.

Meanwhile the rest can read a report from a EA ham:

This is the experience from Spain. Here in EA-land
we had the CW reading tests optional for the HF bands during
the 80's and, as
those of you who were active on the bands by then could
testify, the spanish
phone ops were internationally regarded as "lids". The ranks
were flooded with
CBers looking for more room and their jargon has still firm
influence in the ham
phone language. Most of them bought expensive antennas and
japanese blackboxes
but got bored in a few years and are not active anymore.

Yeah, I know-all politics is local and in ham radio all
"evidence" is anectodal. "Proof" just doesn't exist, does
it? Unless, of course you want to query the Spanish
telecommunications authority to see why they would do such a
Luddite act as reinstituting mandatory Morse code tests for
their ham radio operators....

You are all *assuming* to always receive the SAME treatment and the
same tech team - a rather great leap - and what do you do when you run
out of manufacturers? Check the newsgroups, and you WILL find
virtually the SAME general complaints against EVERY major maker - so
upon WHAT will you base your "educated" choice?

Much in life is a crap shoot... Sometimes we just get crapped ON!

When I was a kid in High School, we had poorer kids driving older well-worn cars they had bought themselves from money earned in fields and orchards - and kids from richer families with new shiney jobs given to them by their parents... Guess WHICH kids appreciated their cars most, as evidenced by the care and treatment each "type" of kid gave his ride?

"A thing EASILY obtained is LIGHTLY regarded" - not a cliche' a FACT of human nature!

It's a percentage game - and when entering into Ham radio becomes little harder than opening a billfold, the percentage improving our pastime WILL see a lowering of quality - just as it did in CB!

After all, what's the real difference between the two under new, relaxed entrance rules?

>

So what makes you think this restructuring saves a single
hz of ham radio spectrum? When the commercial demand rises
to a certain level, any ham radio UHF/VHF/SHF spectrum not
committed to ham radio via international treaty WILL be
withdrawn and refarmed. Bet on it. And even that allotted to
hams under international treaty can be reallocated if need
is such that FCC decided to take an exception to the treaty

So if you believe that this change solves anything, time to
rethink the whole situation. No realistically conceivable
added numbers of new hams will help.

Thanks. I found that the whine was caused by noise from the display dimmer
being picked up by the audio amplifier. It is strongest when the dimmer is
set to the D3 position, and disappears entirely at the D1 (full brightness)
and the "off" positions.

It seems like ham radio operators are getting older in their median age. And rigs are getting more and more expensive. I see in the latest QST that Mil-Spec has a nice, hopped-up transceiver, based on the 781, that sells for a mere $14,000.

I can't imagine how all these septegenerians can afford to stay in the hobby.

If the new rules bring about more, younger people getting into the hobby, that will be good. Maybe by selling more equipment, it could go the same way as the PC industry, with prices falling, rather than always going up.

I look forward to the day when the typical nighttime ragchew on 80 meters is more about what's playing at the movies and which song is hot and what book is interesting, as opposed to the latest developments in social security, medicaid and one's assorted aches and pains.

YUP - complete with a FULL array of audio sound effects and new numerical codes (say good buddy, whats yer 20?) Yeah - *I* would FAR rather hear the latest SS info than the newest fad in sound-effects mics, or hear lower life forms cruising the bands for easy pick-ups as they commonly do on 27 mc - and I don't even have to spend significant time there to be familiar with operating practices displayed there - nor to see the SAME practices ALREADY spilling over into 10 meters!

SUCH is the result of efforts aimed at QUANTITY over quality... And I gotta admit, the CBers DO provide the numbers some of you are so eager to place high priority on...

TOTALLY, deliberately, ignored/missed the point of my post, didn't you!

Alinco DJ-V5, does all that and more for 239.95! You need to do a mod, but it will take you a minute and half for that. Check the Alinco web page.

Jim,

The FCC cannot eliminate the Morse Code requirement below 30 mHz -
this provision is part of international radio law.

Darrell,

Basically a sound idea but it runs counter to a really basic thread
that perminates the entire rulemaking - the FCC wants to make it as
easy as possible for them to administer ham radio. Your proposal runs
counter to that.

Now, I'll add my $0.02 to the whole discussion. I first got
interested in ham radio in 1958 at the age of 9 - got my first license
(Novice) in 1963; became a General in 1965. Built my own first rig
(transmitter was crystal controlled 6J6 oscillator and an 807 final,
receiver was a Knight-Kit regen receiver, later traded in for a
Hallicrafters SX-25, which I sure wish I had of kept). Had some good
times as a ham - even met my second wife via ham radio.

However, I lost interest in ham radio in the early 80s when I got
into computers and let my license lapse in 1983. Sold my last HF rig
(an SB-104A with all the goodies) in 1985 but still have, in the back
closet, my old 2 meter rig (a Motorola Metrum with the PLL exciter
board conversion kit). I've seen a lot of changes in ham radio, and I
think that, all in all, this R&O will be good for the hobby.

Regarding the code test, remember back in the old days when the code
test was one minute error free copying AND you also had to send one
minute error-free (AND you had to use a straight key - no "bugs" or
keyers)? We sure have come a long way to the multiple-guess code test
and no sending requirement! To many people the code requirement is a
real emotional issue - I'll admit it was for me for years. I'll go
along with the reduced speed requirement, though I wish they would
reinstate the direct copy instead of the multiple-guess.

To me, the more important aspect of ham radio is the technical knowlede of communications and how to apply that knowledge. To that end I'd like to see the tests upgraded with a closed question pool. Another poster mentioned that the tests are about a generation behind current thehnology - that should be rectified. The max. grid current on a 6146 was valid in 1970; far less so in 2000. Some basics are timeless, such as basic electron theory and antenna basics, also basic operating procedures. From my listening to the HF bands lately, that last item is in DIRE need of attention!

A friend of mine from Germany has gotten my interest in ham radio restarted, and I was planning to go up for a General sometime in early February - maybe now I'll hold off until April and go for the Extra on the first shot (lordie, in 1963 the Extra was like a shining light on a very far away hill for me).

I never thought I'd hear myself say this, since in the past I've always come down on the side of "quality VS quantity", but the bottom line is that what is going to save ham radio from the "spectrum vultures" like the HF broadcasters and another UPS with a hair-brained scheme is NUMBERS - that is what the politicians at the FCC respond to. The more of us there are, the harder it is for them to screw us (more hams=more hams that VOTE). Thanks goodness we do have a few hams in the FCC that can be a voice, but it still comes down to numbers. Something else that would help is to get more hams elected to office - many of you know what a champion Barry Goldwater (K7UGA) was of ham radio during his years in the Senate. We don't have a ham of his stature in national office presently.

Well, I've consumed more than my fair share of bandwidth, so I'll close with the following thought - - -

Look at this situation keeping in mind how the world IS, not how we'd like it to be. We have to deal in REALITY and in the present, not in the past.

Hello!
I think my point may have been lost in my long original post. Many people replied (and I thank each of you) to let me know what scanner they have/enjoy/reccomend/etc. This is good to see but what I want to know is:

-Are the Pro-92's problems ONLY related to receiving Motorola trunked transmissions? Someone recently told me that my local trunked systems are all edacs so this point has become more important for me.

Essentially- if all I ever listen to are trunked edacs systems, will the pro-92 be as 'good' as a 94 or BC245? What about if I listen to (only) Edacs systems and conventional channels?

-Will the lack of a data skip be a serious concern? There are roving data bursts that I hear on *different* frequencies (when monitoring the trunked frequencies on my conventional scanner). Will the Pro-92 occationally stop and force me to listen to these non-voice bleeps and buzzes (*more than the 92 or 245 would*)? Or will it somehow recognize it as data and skip over it? Conversely, if I get a pro 94 or a BC245, will the data skip be robust enough to skip past these data transmissions? If the 94/245 data skip wont really protect me from these data "intrusions" then there's no reason to deprive myself of the advantages of the '92...

-Has anyone hacked the Pro-92 interface? I give some relevant information below...

-Is there a new updated version of the BC245? I read several posts indicating that there was a rumor about a 'fixed' version with less of a delay (less than the current 5 second delay) and more than 30 channels per system.

-P.S. where's the cheapest place to buy either a 92,94, or BC245 scanner? Everyone seems to have the same price at the same time, I'm wondering if there's a supplier anywhere that can undercut the "Standard Radio Shack, Scanners Unlimited, Scanner World, and Grove Price"

I've left my original post below for reference.
Thank you again to anyone who puts their two cents in.

In rec.radio.amateur.misc Spencer F. Ritchie <sfritchie@worldnet.att.net> wrote:

| I replied! And sent approx 5 pages worth explaining why we needed to
| maintain 13wpm and 20wpm code speeds. I sent a notice for proposed
| rulemaking about two years ago, calling for an expansion of the 80m extra
| sub-band down 25khz. When the FCC turned me down, they sent a notice about
| the licence restructering. I felt I had to make a comment about it. But they
| didn't listen anyway. CW IS still used for weak signal work Especially for
| EME, 160, 80, 6m 2m and so on. Also probagation beacons are used extensively
| on 10m and 6m. I'm pretty active in these modes. And found cw superior to
| most modes when conducting weak signal work.

Were you basing your argument for keeping 13wpm and 20wpm on the fact that CW is used for weak signal work? If so, I can see why they would ignore it. The fact that CW is essential for such work argues AGAINST it being a requirement for any license because the very fact that it is essential for the work means the license requirement simply isn't needed. If you want to do what just out of necessity needs CW, you will learn it (or do it all by computer). Can you say that if CW had not been a requirement to enter ham radio, that you would have never learned it on your own and ended up using some other mode in weak signal work despite the fact that CW is the better mode for it?

The FCC is charged with addressing the national interest. Amateur radio exists not because it's fun, but because there is a benefit to the national interest in having it. The requirements for licenses addresses the national interest as well (or at least they are supposed to). Developing a pool of skilled CW operators has in the past been of national interest. Since the military ceased depending on Morse Code, the nation interest need vanished. And that was many years ago. The FCC is just now getting around to cleaning things up.

I have a FT101ZD that I need to have a general alignment / tuneup done on.
It also only puts out about 60 watts even with a new matched pair of tubes.
I would like to see closer to 100w.
I live between Winston Salem and Charlotte NC. I would prefer to take it to
someone. I would ship it to have it worked on if the place is an expert on
this type of work.
Any thoughts or recommendations?

Thanks,
Mark

The list of all individuals that sent commments to the FCC is listed in
appendix A of the report and order, so NO one can b.s. that they did send
comments to the F.C.C!

Hell, they did that in the 50's when CB was established. We have been using no code below 30MHZ since then.

I still believe that emergency services are what hams
will be able to provide that the commercial world cannot and
will not. The local 911 system is very fragile, and highly
political too. Given any kind of problem, it would be gone
in a flash.

My wife, as a public health nurse, went down to Tarboro,
NC after Princeille flooded out. The state had NO way for
their employees to communicate back home except through

whatever commercial phone service they could get. The
nurses were not told where they were going, where they would
be staying, or even when they would come back. After they
got dropped off it was up to them to try to notify their
family where they were....if they could. As one person told
me, they don't know where they are going and when they get
there there are no communications.
Here is where ham radio could make a big difference, at
least in theory. Volunteers could emerge from their homes
with their transmitters and help out a lot in such
circumstances. Cell phones were useless for 1 week after
the flooding....overloaded and/or shut down. Only about 8
days after the disaster did AT&T bring in a large dish and
establish free phone service for the 2,300 living in a high
school gym with no cash or access to money. Then my wife
could phone home, but only for 3 minutes incidently.
However, locally I guess the hams are under contract to
provide for backup for 911, not to relieve suffering of
people who cannot found their spouses for 8 days after a
disaster, and had to assume they were dead while everyone
told them, "Maybe they are in another shelter."

Source record: 90213

When the audio pitch goes from high to low, then just dissapears , that is the exect frequency he is transmitting on. Not much good to most as you can not copy it. If you have wide filters the pitch will go from high to low to nothing then low to high. The area inbetween where the low pitch is at is the zero beat frequency.

Most transmitters will offset the receiver from the transmitter by about 700 to 1000 hz so that if you are receiving a 700 hz tone you will be transmitting 700 hz away from that so the other station will think you are on the same frequency.

Source record: 90215

Howdy Pete - I'll see if I can clear this up for you. First of all, the condition known as "zero beat" refers to the result you hear (or could observe on a scope) whereby there is no "tone, motorboat sound, or even slow beat" left as your receiver now has been set to beat exactly the same as the received signal. As you've noticed, as you tune up from below the signal you're listening to, the resulting tone gets lower and lower until it becomes a buzz, then individual "thumps" or beats can be heard only, then NOTHING (this point is zero beat), then the opposite is observed as you tune away on the high side.

So what does this all mean and how does it relate to you operating - I'm going to make some assumptions about the type of gear you may be operating so bear with me.

1. No matter what your receiver dial indicates, the point where you've "zero beat" the station you're listening to, will be merely a reference point for you to then either
A - Adjust your BFO to its center frequency and read the received signal from your dial (if you have a bandspread dial, it must be on its calibrate mark).
OR
B - Put your own transmitter on "SPOT" position which causes a very low level signal of your own to be heard in your own receiver for the purpose of "zero beating" ALSO TO THE SAME POINT that you have the received station "zero beat". Having done this, you now OFFSET YOUR BFO so that you can HEAR THE RECEIVED STATION (the whole purpose of communicating eh!). What this little exercise has done is to ensure that both you and the station you're listening to will now transmit on a frequency that each other can hear! If done carefully, you'll both be on the same frequency, if not you'll both be a little off BUT STABLE in each others receiver.

Another, maybe more useful, use of "zero beat" is to calibrate your receiver to some known frequency standard. This might be a generator or other source on your own bench, a crystal calibrator built in or adjacent to the receiver you're using, or an off-the-air received signal of known

accuracy, such as a time signal station or other
commercial station (most likely) transmitting an assigned carrier (CW or AM types of
signals mainly).

A genuine fly-in-the-ointment to using zero beat with many
transceivers, however,
is that, on CW, they are often aligned so that the frequency you hear and the frequency
you transmit on are some audible distance apart....700-1200 Hz with 1000 Hz being somewhat common. Problem here starts with knowing WHICH SIDE of your receive frequency your transceiver is aligned to transmit on! Many are set up to transmit HIGHER than the received frequency. This sorts itself out if using SSB type of filters/mixing schemes but should you be able to hear the received signal ON BOTH SIDES of zero beat, then it becomes a toss up as to whether
A. The other station will attempt to zero beat and
correct to your
transmitted signal
B. The other station is using the same or OTHER
offset to you, in
which case the 2 of you may "dance" up or down
the band as each
other tries to correct during a QSO.

The discussion above mainly centers on CW operation (and the AM folks will be laughing here as they have none of the above problems), but the same problem crops up
when using (mainly) a seperate transmitter and receiver on SSB whereby both tune seperately (not locked together which is less cumbersome). In this case, you have a couple of options. The best one is to receive the desired SSB station so that it sounds most natural to you, then put your transmitter on SPOT in SSB (make sure same sideband!) which will cause a low level of your voice or background to be heard in your own receiver, and adjust so that (think about this) THE AUDIO FEEDBACK FROM YOUR RECEIVER's SPEAKER when RESENT VIA YOUR OWN MIC in SPOT, causes you to hear THE FEEDBACK ZERO BEAT.

Try the above.....with a little practice you'll be closer than 100 Hz and no one
will know that you're using seperate equipment.

To all the above there are a dozen varied uses and techniques, I've described a couple of common ones.

73 - Keep on Tinkering.....THAT.....is REAL HAM RADIO

I think it's great that elderly hams get on 80 every night and talk
about Social Security. What bugs me is that's ALL you hear on 80,
night after night.

Where's the under-50 crowd, the under-40s, the kids that are the
future of the hobby? Without them, this hobby doesn't exist. When I
was first licensed in the late 1950s, I had several teen friends who
were hams -- right there in the neighborhood! How many teens do you
know, today, who are enjoying the hobby?

>than the newest fad in sound-effects
>mics, or hear lower life forms cruising the bands for easy pick-ups as
>they commonly do on 27 mc - and I don't even have to spend significant
>time there to be familiar with operating practices displayed there -
>nor to see the SAME practices ALREADY spilling over into 10 meters!

I agree with you about the CB-like practices, but I think you assume
too much that the CB band, and that culture, is the only place we're
going to get new hams. There's a whole world of nerdy computer geeks
that, I think, would enjoy ham radio if they knew enough about it to
get involved. But they're not going to get involved if you bring them
into the shack and the only thing they hear is elderly hams discussing
the fine effects of Viagra, or whether Bush or Gore will give them the
best Social Security benefits.

I think Kachina and Ten-Tec are both missing out by not advertising
their computer-related boxes in the computer magazines. Running ads in
QST and CQ is just preaching to the choir, and not bringing any new
converts into the hobby. We need to look outward, not inward, to keep
the enterprise going.

Trying to identify. I have 3 of these and the only info on them that appears meaningful is:

Model # FuF1848A
On the rx(?) circuit board 84D80949T01
On the tx(?) circuit board 84D80199M01
On the Eprom FRN4008A, V1.0 Mod B7

The front panel has a 2 digit channel LED
It has indicator lights (Tx/Bsy, Call, Scan)
It has pushbuttons (System, Subfleet, Phone, Scan, Select)

The front panel is labeled: MaxTrac 800

Barcoded on the chassis side is: HUF3037A.

The unit was made in Israel.

Can anyone give me technical info on the unit? It has got to be good for something, right????

Is chopping off fingers related to ham radio? Is it a method of
communication? If so, you'll be doing short transmissions, and not for
very long.

Choping off a pinkey has about as much to do with communications as does CW.

The FCC and Congress care little for Amateurs as numbers or Voters...
Hell...At best, Amateurs represent a couple of hundred thousand voters...
very divided voters at that! ...NOT EVEN A DROP IN THE BUCKET in National
Elections!

Right now the FCC is dealing with years of budget cuts... therefore, right
now the FCC cares mostly about budgeting it's resources... Amateur
licensees contribute NOTHING towards FCC budgets. (for that matter...
neither does CB, but the FCC has no cost involved with CB other than
occasional enforcement as in the ham bands, where fines tend to pay for
costs incurred)

I am in need of the schematic for the Pride 100 linear Power Amplifier.
Please email me at tmize57@juno.com
And of course I will pay any costs involved.
Thanks for your help!
Tim Mize N7XAU
tmize57@juno.com

Now my experience in the Detroit area in the late 50's early 60's was totally different. The local 6 meter club had a number of hams who seemed eager to help someone in their teens get on the air. They gave technical assistance, sold equipment for whatever I could afford to pay, and even loaned stuff when there was no money available. On the air, I felt like I was always treated as an equal even though I was a teen and the rest were older.

I wouldn't put this past the Feds, but I think this one is a crock!

Ramsey electronics apparently "ain't scared." Their website is up to date
and currently active with their full line of products.

If I was raided at gunpoint, I don't believe my website with the products in
question would still be active.

Definitely check out the QST article. If I was starting over, I'd probably consider the Astron SS-30M or the MFJ-4225MV.

I already have a Samlex SEC 1223 and bought it at Radio Shack.com when it was on sale for only $79.99 ... cheap enough. I'm using it to power an ICOM IC-2100H and, at my usual output of 5 Watts, I'm sure it is just strolling along. The cooling fan never even turns on. Since the noise factor is load related, I'm probably not getting much noise out of it. Even at max power (55 Watts) the ICOM only draws 12 Amps, so I'm only at half the capacity of the power supply. I bought a larger Amp rated power supply to minimize the potential noise ... especially since I new I was buying a cheap power supply.

Regardless of what the QST article says, the Samlex SEC 1223 DOES have a chassis grounding lug on the back ... but no screw. And it is a strange screw thread which I could not find locally. Samlex sent me one in the mail for free!

Regards,
Lee

This is an equipment newsgroup and I can usually take a lot of stuff by just deleting it but that is all I am doing anymore. How about everyone just getting on the air tonight at midnight and just shooting out whatever is on your mind and be done with it. It has good points and bad points and there is nothing that is going to make everyone happy. Now back to EQUIPMENT which is what the REAL HAM is all about for without it it won't matter if you at one wpm or 60 wpm. I never did understand why 20 wpm made a better HAM actually all it real did was make a better CW operator. A true VHF/UHF HAM is really more of a really HAM is he is really into making equipment work right at those frequencies. I am only an HF person so that leaves me out of the true HAM catagory.

I can't take it anymore AHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH

The demand may be hot from the old guys, but you don't have a whole lot of new guys wanting to get into that anymore. They all want to get into computer technology and start the next yahoo! or whatever, and get filthy rich. The fact that you can't find technicians kinda bolsters my point I think. It's boring to many of them, and they want to get into something more "glamorous". Also the pay scales for run-o-the-mill techs is not the greatest. At least compared to starting the next Yahoo!/netscape/whatever. I'd probably want to work for myself if I was a tech. Even run-o-the-mill programmers get pretty high scales. I think the average "temp" programmer gets 40-50 $ an hour. Many much more. About the only ones wanting to get into rf these days are the nerdy looking types with coke bottle glasses that have already been a ham since they were 9 years old. G And they would opt for a engineer degree. I think a few will get pushed into rf later, as it merges with computing etc. Maybe sad, but true, I think anyway. MK

I have a Heath HW-101 with a burned out choke in the plate circuit of the final amplifier. The diagram rates it at 425 microhenries.

Does anyone have something that would work in this spot? The old part mounts with #6 threaded holes in the ends of the ceramic form and is about 2.5 inches long and a half inch in diameter. Of course I am willing to try to fit in something else. Wire size has to be enough to handle around a quarter of an Ampere direct current I estimate.

If I can't find this part I may have to rewind the old one.

Yea, but I do the same thing.. But I ask... where is that Commercial
dual bander with HAM on it?

more so... where is that dual bander with this quality even without
ham!?!?!??!

I use the Yaesu FT-50R. Vertex, their commercial counterpart does not
have dual band... unfortunately not all emergenct services are on the
same band. And to get a dual bander, you buy a big ass ugly radio.

If you want to criticize others, you need to be the first to stand up
and be ready to take it like a man, what ever the repercussion may
be. Email addresses and porno groups never hurt anyone -- hell,
half the hams out there might actually learn a thing or two! I
contend you are a sissy too afraid to make public comments from
behind your pc screen or micrphone. If we are so easily able to uncover your
identity, then why do you even bother to pretend to
hide it? Seems pointless to me.

> User

That's fine. I choose to not cheapen ham radio with CB type
lingo, dumbass roger beeps and other annoying toys, etc.

The whole discussion annoys me because you sound so much like
the new comers who have radio "rights" not radio "priveleges"....
It's not about violating rules...at one time, ham radio was a
gentleman's international fraternity, with barriers to entry that required work
and knowledge, that allowed the ham to climb a technical ladder as he enhanced
his communication and electronic skill, that was self policing of illegal
and/or immoral activities, and that was self cleansing ---with those not
willing to move "up" being forced "out". It was also a hobby that rewarded

each technical and communication merit
with expanded operating priveleges (not rights).

I, for one, will continue to tutor the new hams and teach them right
from wrong. It should be no different than how we raise our children.

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $350.00 includes extra charger & shipping Unit Retails for $379.99

The "Tech Test" was actually different before the novice
enhancement. Techs who upgraded by taking the 'General'
test can do the upgrade just by showing proof of having their
ticket, meaning they took the OLD test. Techs that upgraded
after that time took a slightly simpler test than the General test.
While the difference may be hard to spot, the questions were
from different question pools and met different criteria.

And this is a KEY issue against the 'so called' incentive license
scheme. It was hard to justify 'incentive' when the ONLY
difference between the old tech and the general was the
CW test, but by taking the CW test it granted mostly voice
privlidges.

That 'slight' change to the written countered that arguement.

I am very new to Amateur Radio (uhf/vhf). I've been playing with CB's and Tele-Com for years, and am a computer programmer by trade. For 23 years old my life is a very busy one as I work, build up my own business, go to school, try for some kind of social life, self educate (i.e. Amateur Radio, science, physics, err.. life), read the news, yadda-yadda-yadda, each and every day. I rarely get any sleep, and it's been this way for the last 8 years for me. I realized early that what it takes to succeed in the future (todays future) is a whole lot of work, and self sacrafice.

The point.. I will be glad to learn Morse when I get my license (I can't wait!!!) and I will be glad to continue my learning experence, but I must say that I am also glad that the requirements are lessening on that front, for I would like the chance to learn more about Radio than I would be able to having to learn Morse at 13-?? wpm along with my current schedule. Imagine you wanted to get into computers, but you had to learn to type at 80-120wpm (which is the requirement for my job) just to use one. I'm proud of my typing speed (128wpm, w/spelling errors), and I know I'll be proud of my Morse speed, whatever that ends up being.

Hey, you wouldn't beleive how fast I can talk ;P

*Why blame the ARRL? I'm not a member, but it seems to me that the FCC took
*the restructuring one step further than the ARRL wanted.
*Didn't the ARRL want 12WPM for Advanced and Extra and 5WPM for General??
*How about four classes instead of three?
****

That requirement was there to satisfy the board members. The resolution that passed the board was 9 to 6 in favor of the July proposal in 1998. The first attempt failed in January of that year. The proposal sent tothe FCC was a compromise from the ARRL board of directors.

Belive me this has been a hotly contested subject for over 20 years and many are dead set on change. The change from actually sending and receiving CW to that of only receiving was hotly debated. ANd when the CW test became just a multiple guess test that even caused more of a stir.

I have been predicting that this action would take place since 1979. I have had my license since 1976.

****
*A lot of you ol'timers out there think that CW=CB with respect to this new
*license structure. IMHO, you're wrong! HF has a serious learning curve when
*it comes to long wires, tuners, grounding, etc... It's not like you plug in
*the mag mount to the HT and start yacking!
*
*I worked really hard to pass the 5WPM code last month and I have been
*working a little 10M here and there. After stringing the longwire, tuning
*the MFJ941, the DSP-9+ and figuring out the Icom 706, HF is a lot of hard
*work! It's so rewarding to make a distant contact after all that...Don't
*forget the price of HF gear. You can buy several HTs for what a
*run-of-the-mill HF radio costs. You really have to want to get on HF. With
*the learning curve and the cost, I don't think it's going to be as bad as
*some of you think.
*
*Oh well, bring on the Extra!
****

Today the amature radio service has now become more of an appliance operation. One does not need a technical background nor an engineering background to become an amature operator. Some have associated that if one can learn 20 WPM that should make them more responsable operators. I appluad your dedication to learning CW. I met the requirements of 5 WPM 24 years ago and passed element 3

in 1977. I chose not to go further simply because I did not see the need and still don't see the need. I have not used my key since about 1979.

As for the new regulations effective date of 4/15/2000, I plan to have a new HF rig that I am now working on. Completely designed and built by myself. Always wanted to. I have all the equiptment and parts assembled to start building.

regards
james

Can anyone point me toward resellers/manufacturers who sell Mobile Repeaters? Right now I am specificaly interested in 70cm ability, because everyone I know where I live is using it.

I've got a handheld that does 2m and 70cm, and have been looking at some dual/tri/quad band mobile units that look nice. The ultimate would be the ability to use the repeater with 2m and 70cm, or more..

I'm new so slap me around if I'm lost..

Thank you!

Niaht

? thoughtfully remarks...
> k0mb are you a VE? If you are feel free to start the movement.

Reading this thread, I think I am going to have a movement of my own.

Jeez - can't we all just get along? - if I were not a ham, reading the elitist proposals of some of these folks would make me think twice before testing.

Extras refusing to test? Not speaking to anyone licensed after 4/15/2000? Let's step back from this for one second and listen to ourselves for once.

Now, since I am advanced, does that make me MORE of a ham than a general and LESS of a ham than an Extra? And if I upgrade to Extra by taking the 40-question test BEFORE April 15th, will I be more or less of a real ham than if I upgrade by taking the 50-question test AFTER April 15th?

These are the questions of life.

Scott - WA4SE

I have a J-36 semiautomatic key build by the Lionel Corp. during the 40's, in good working condition but missing the switch assembly for tuning the rig. I am not a collector, just a simple user and fan of cw, so somebody could please help me obtaining it?

tnx's

Press Release

LogWindows 3.06.50 released

Program available January 5, 2000

Muscle Shoals, Alabama. January 3, 2000: Creative Services Software announced today that the first update to LogWindows, version 3.06.50 will be released on Wednesday, January 5, 2000.

LogWindows was created in 1994 by Ira Chavis, WA1W and had been distributed in the past by AEA, Timewave and SCO. The program interfaces with all of the CSS TNC host mode programs including PacTerm '98, PKTerm '99 and MultiComm Host.

CSS is selling the program through dealers and direct sales.. The program will retails for $49.95. CSS is offering upgrades to current users of the program for $25.00, as well as a competitive upgrade from other logging programs for $35.00.

"If someone purchases or upgrades to LogWindows 3.06.50 now, they'll not only get all the future 3.x upgrades, but also a FREE upgrade to the 32 bit version of LogWindows when it becomes available", said Rick Ruhl,. President and owner of Creative Service Software.

Creative Services Software is at http://www.cssincorp.com
Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

From: John Watson <jwatson@cde.com>
Message-ID: <387121FF.F3111C7E@cde.com>
Source record: 89909

Hi Jerry;

I received your replies to my questions about your 920, but I
didn't know you were going to "sell" it. Would you be interested in a
trade for a FT-990AT AC model with the 2.4khz filter, and 500hz CW
filter? I have been interested in trading or selling mine for a 920,
maybe we can be of use to each other, let me know.

385. RFI From Home Computer Networks

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-03 00:00:00 UTC
From: Pete Holden <peholden@home.com>
Message-ID: <Np9c4.1486$406.25426@news1.rdc2.tx.home.com>
Source record: 89910

I'm getting an intermittent crackling noise on 20m that sounds like the demo on the site mentioned below. It's not in my house since I've heard it when everything is off. Maybe it's one of these computer networks in some nearby house.

Whatever... That's not really the point of this post.

Background>> Since I only just became an active ham again after many years I didn't know anything about this threat until I read Ed Mitchell's article on http://www.hamradio-online.com/. It would seem that these networks have the potential of knocking out most of the HF spectrum just as we hams will be trashing their signals.

So, hoping that some of you know more about this, I have three questions...

1. Won't these unshielded signals bleed through the power grid (or phone lines) from one house to the next thereby rendering the whole concept useless?

2. Is there any technology on the horizon that will allow us to coexist (some kind of filtering perhaps)? I'm asking this in the hope that some of you out there work in the industry and might know more about this than Ed. He seems to think that there is no way to separate our signals from theirs.

3. Is the FCC really going to turn its back on this looming problem?

Yes there is a battery, its located behind the front sub-panel (The bit where the display plugs into) it a solder type button cell. To get access remove top & bottom covers, There are then 5 screws holding the sub-panel in place, 2 at top, 2 at bottom, and 1 alongside connector for mic plug. As you release the front sub-panel you will have to unplug the connector from the sub panel to the control panel pcb which houses the battery.

The battery part number is Q9000552. There is also an insulated self adhesive cover R8118690 which should be ordered as well.

Hope that helps

Regards
Alan G8XLH

I think you miss the entire point. We all can and should
be the pot calling the kettle black. That's what self policing
is all about. While we occasionally use Q signals and other
prosigns on FM, we should all strive to be the very best operators
that we can. Some of us are just more open to constructive
criticism than others. That is why I sign my name and callsign
and you choose not to.

I am willing to be taught by others, open minded to corrections and
to upgrading my operating precision.

Most hams, as you illustriously point out very well, choose not to
be corrected (and hide behind "user" names instead of real name and
callsign).

Joe K7JOE

Nothing I've seen you publish here looked very constructive.
I hide behind a standard email address because of vindictive assholes
who love to take your address and subscribe you to many different
email reflectors, post it to porno groups, and other such friendly activities.
So sadly in this forum I don't freely give out any identity data. I'm just
as open to *CONSTRUCTIVE* critism as the next person. Not knowing
my identity doesn't change that. In any event an intelligent person like
yourself shouldn't have much problem determining my identity.

>Most hams, as you illustriously point out very well, choose not to
>be corrected

As much as I deplore the use of "personals" it's not my business
to correct such use. Mainly because it violates no rules. Just as
using Q-signals on voice violates no rules. But I do wish you luck
in correcting our new ham friends.

Maybe the reason people need out of band mods, is because we fear people
with handguns, and we need a way to call for help.

Now it's starting to make sense.....hmmmm.....

FWIW, CW at 5 wpm is more work than higher speeds. It is most enjoyable
when the CW is no longer a barrier between the operators in contact.

No system, except for a paddle or key.
>
> What's the fastest known straight-key speed?

Dunno there. I'm guessing in the 30-40 wpm range. But really don't know.
Not many use straight keys at the higher speeds anymore. In the old days
it was quite common if the guy didn't use a bug etc.
> What's the fastest for iambic and keyer?

Who knows. Myself on a bencher paddle, I peaked at about 60 wpm sending.
I couldn't really go any faster than that without getting sloppy. The
real speed demons use keyboards, but I never liked those. I use a
paddle. MK

I bet the wireless you refer to has nothing to do with ham radio.
Probably some method of wireless computing. Which is nothing really that
new. MK

I'm not sure where you purchase your radios, but the HRO near my QTH sells radio modification instructions. And, I've never had anyone ask, when I've purchased a radio, "Are you licensed?", let alone, "What do you plan on doing with this radio?"

What about those ten year vanity license fees of $14.

Sure we can use up our old supply of 1000 QSL cards in six months, that's
one way to get folks back on the bands.

But... Do you propose that the FCC give back the $14 vanity fees?

Sure, a bencher will send 50 wpm just fine. It's over 60 wpm that gave me problems. I tend to get pretty sloppy. Mainly because the dits are so close together that it more like a machine gun. You have to space your dit timing by the sound of the "dit burst" rather than counting dits. So in the end I peaked right about 55-60 wpm. About 10 years ago...I'm starting to slow down now. I don't get on the air near as much anymore. My cw speed is starting to suffer. But I can still clip along pretty good. But now more like 40-50 wpm max these days. And the number of op's that go that speed are dwindling, so that makes for even less practice. One thing, you HAVE to use code at that speed on a fairly regular basis to learn it and keep it up. I work 40 cw quite a bit when I do. Listen around 7.030. Thats where quite a few of the fast coders hang out. Or used to anyway. Like I said. working cw is much the same as learning to type. No magic to it. Just practice. When you hear of a typist doing 120-150 wpm, you don't really wonder, hummmm, how does he do that. You know he probably took a course in school etc. and practiced alot. Code is the same. It's really alot easier than it sounds to the non coder. I claim no special abilites, I just worked cw non stop for over 20 years. My first 7 years as a ham were cw only. Didn't even own a mike. And I didn't quit when I upgraded. By the time I got my general I was doing 20-30 wpm. Most all the hams I knew personally that got their tickets when I did can do the same. I'm talking about all sorts of wireless (radio) communications.
RF Engineers are in MAJOR demand and have been for the
last 5-6 years ... and there is no end in sight.

I wish I could find a good RF technician to hire. If anyone
reading this is competent and lives near Allentown, PA, I'd
like to get a resume from them ASAP. (MS Word via e-mail
is fine.)

>dumbing down.

What you don't seem to grasp is that the new element 2 is the old element
2 with the addition of the old element 3a. In other words, same test material
as now, but combined into one element. Also, the new element 4 is the old
elements 4a and 4b combined. In other words, instead of being in baby steps,
the new elements are larger steps covering the same material. The new
writtens are a tad harder for the memorizers than the old because each
will cover more material in a single test element (you can't know which of
the pool questions will appear on your particular exam). For those who
know the material, of course, there is no difference.

It seems that a lot of people are assuming that reducing the code requirement is making it easier for some kind of lid to get licensed. There is no guarantee that passing a code test makes one a 'good' operator and that the inability to pass the same makes one a 'bad' operator. In fact, I've witnessed lots of 'bad' operating practices by current licensees (who probably had to pass a code test).

As much as I value my ham radio priviledges, I don't think that there are that many outsiders who are even interested in ham radio. There are some who really want to be hams, but have been unable to pass the code tests. For those, the new licensing will allow them to fulfill a dream and I suspect that they may become some of the best operators and will respect their new priviledges.

Times have changed, Morse code is an enjoyable, but outdated mode of communication. We need to make sure that the written elements are changed to reflect the skills needed to operate in today's environment.

We also need to practice hospitality on the bands and gently teach new operators proper operating techniques. I think most new operators can learn and will use proper operating practices if taught properly - and cranking up the amp to splatter all over a newcomer is not the proper way <g>.

>> suggestions about which of these or others would be the best. Please
>reply

847 - full-size rig with good VHF/UHF qualities but not very good on HF
890 - near-full-size HF rig with medium HF performance
100 - very compact rig, good for mobile but not very comfortable
stationary.

If you are on a limited bufget, you may consider used rigs. TS-830 or
IC-751 would deliver good basic performance for $400-600, and TS-850 is an
excellent full-size HF rig for about $900 with antenna tuner. WIth new
rigs, TS-570 has a good reputation although in SSB TX it won't be as good
as any of the mentioned used rigs.

That is an interesting concept.

I'm not sure that advertising the radios is in non-ham magazines is the way to go. When a ham sees an ad for a radio, they know (or should know) that it's not a matter of plugging in the radio (unless you already have a power supply, an antenna, and a ground). We can't expect the manufacturers to provide the kind of support that a non-ham requires.

However, I think it may be worthwile for that ham radio community as a whole to get involved with the non-ham magazines, though I'm not sure how. Perhaps the ARRL (or another similar organization) should advertise with the goal of recruiting, and directing those interested to local ham clubs (that are welcoming). Have you noticed that many hamfests have also become computer shows? Maybe local ham clubs should consider renting a table at non-ham computer shows.

Let's see what's wrong with this statement......

First, you make an assumption that those of us that do not hold CW up to
the same reverance as you do, are somehow "idiots". Then you make an
even more radical ASSUMPTION, that these same people are going to
somehow ruin ham radio.

Based on what? Where is your proof?

You are exactly the type of close minded ham radio bigot, that I was
refering to.

If you can't keep to the issues without letting your runaway emotion
cloud whatever logic you may posses, then you'll never progress beyond
your initial prejudice.

Dave

> Code requirement as is politicaly possible is ARRL policy.

That is exactly what the ARRL's "compromise" proposal was ...
as many classes of license and as much code as they thought
stood a snowball's chance in hell of getting throught the FCC.

They guessed wrong.

The R&O almost exactly reflects the NCI proposal (T/G/E, 0/5/5),
with the only thing of any note that we asked for that we didn't get
being the "sunset clause" and that's not that big a deal since it wouldn't
have "kicked in" until after the WRC deletes S25.5

> It is different from trying to Go down with the ship (all of the ARS) on
the
> issue of code, but it remians in favor of code testing requirement

That is why I stated in a recent post that this is a (somewhat) different
ARRL than existed at the time we lost 220-222 MHz. That ARRL
took an "over our dead bodies" attitude with the FCC and we all
paid for it. I'm glad the current ARRL BoD is a bit more flexible.

news:ABWb4.1343$73.14128@typhoon.sonic.net...
> Then, how do you explain the loss of part of 220 MHz?

I did ... that amateur community in general and the ARRL in
particular had been particularly intransigent WRT the FCC's
proposal for a nocode license.

I was told quite directly by the then Chief of the Private
Radio Bureau (who I was well-acquainted with, broke
bread with and met with when I was in Washington,
etc.) that the loss of 220-222 was meant as a "wake up
call" to the ARRL and the ARS to "get with the program"
and that had the ARRL not taken an "over our dead bodies"
attitude towards progress and the FCC's proposal for a
nocode license at that time we wouldn't have lost the spectrum.

> There was no "public
> interest" served, only the private interests of two corporations: UPS and
> Motorola.

That's ridiculous, since neither UPS nor Motorola got the spectrum
and Mototola is not, to the best of my knowledge, a producer of
the narrowband gear used in that band.

The public interest WAS served in the sense that a new SMR service
was established there by folks who WOULD AND DID use new
technology to improve spectrum efficiency ... whereas the rest of
mobile radio was using FM and 25 kHz channel spacings, this band
requires 5 kHz channel spacing, which in turn requires more advanced
modulation techniques which provide better spectral efficiency.
(Additionally, our use of 220 was dismal and still is, but we still would
probably not lost the spectrum were it not for intransigence.)

NOW, don't get me wrong .... I am NOT celebrating the loss of
220-222 ... I was angry about it too and the FCC could have found
2 MHz somewhere else nearby to reallocate. But I was actually more
pissed off at the ARRL than the FCC on that one. They (ARRL) did
it to us even more than the FCC.

However, this is a different year, a different FCC, and even, surprisingly,
a (somewhat) different ARRL it seems.

I have an ICOM 706 and a Yaesu 8100 in my pickup truck. The hook of the 706 is easier and more natural a motion when lifting. The Yaesu requires you to slide it straight up.

I think what you think is warp speed and what normal cw users think is
warp speed are two different things.
Granted, the uses for cw seem to be dwindling, in these days of newer
modes,so I won't argue that, but if you use cw as many still do , it
helps to be able to go at a speed that is usable for decent
conversation. Slow speeds are uncomfortable to many, including me. And
my signals would be 2 light years from earth by the time I said
anything. 13 wpm is really the bare minimum for normal use. Most regular
cw op's prefer faster. It just like typing. To a regular cw user, going
under 20 wpm is like hunt and peck one finger typing. Going faster
really is much easier in time. I don't know what I'd consider warp
speed. Would have to be well over 70 wpm to qualify. The record is still
72-76?? wpm, I believe set by Mc Elroy along time ago. Very few ever go
that fast. But 50 wpm is very common. MK

I think this may be true only because they don't know of the no-code license.
That is a shame on the ham community for not stating this simple fact to those
they know are interested, but are afraid of failing the code.

It's mainly boredom of an old technology. Radio is old, and is old hat
to the younger crowd. The code has very little to do with it. Remember
the mad rush in the 70's when all the cb crowd got into ham radio. The
code didn't seem to bother them much. Anyone who really wanted a ticket,
learned the code. It's just not that big a deal. But radio was still
fairly hip. Not so now. Internet and puters etc. rule now. That is what
is causing the drop in numbers. MK

Well maybe not a similar experience, but I've replaces many power supply filter caps in old AM receivers that caused the same problem in the audio.

I found it very difficult to replace the old 4 or 3-in-one caps with original type replacements (in some cases, very expensive). In most cases I just hooked up several caps of the stated capacitance is the identical way or made up strange value caps by combining modern caps(parallel or series)... worked fine on most rigs, but I did notice on some that PLACEMENT of the caps and lead length can also be a factor doing it this way.

Most likely a dirty bandswitch. Or something along that line. That they
run on some bands means the problem is minor. Try cleaning all the
switches for a start. Use a good cleaner of some type to get in all the
rotary switch contacts. Also make sure the "rubber band" shaft links are
not slipping or broken. Those are commonly broke or cracked with age. MK

The problem is the sun will take weeks and weeks and weeks....

Regular blacklights that you buy for entertainment are actually
'shielded' in the frequency range you need for safety reasons.

While you can get unshielded bulbs, they're not too common.
But you can get 'mini-erasers' fairly cheap by mail order. I
think I got a little guy that does 4 chips for $39.

Another of my vague posts. I just got an FT920, which I dislike very much. It is largely a SSB radio. Only accessory is the CW (500hz) filter.

Was thinking of $900 for it. Like everything on the list it is mint.

Guidance appreciated.

Let's go back to the days when your call sign said ABSOLUTELY NOTHING
about your class or longevity! All this slicing and dicing and
segregation and pecking-order-mentality based on perceived rank and
seniority belongs in the Army, not in Amateur Radio.

I think the FCC should give us all 6 months to use up our stock of
QSL cards, and then do a one-time redistribution of calls, starting
with W1AAA and just continue sequentially without regard to age/race/
creed/class-of-license/how-fast-you-beeped-at-your-test.

Source record: 89979

I have had a 757 for several years and it seems to work fine. It does have all the modes in it and you should like it. Unless the power supply goes with it, you might want to look into getting one made by Astron or possiable another brand. If I remember correctly there are several types of Yaesu power supplies that match that rig. One is a light duty rig and not sutiable for continious duty modes such as rtty, psk31,sstv and fm. The other has a duty cycle on it also. Also as your shack grows, you will want more power to run things such as a 2 meter rig. YOu can get an Astron 50m for about $ 209. Try www.aventrade.com.

Unless you are going with a beam, just hang a wire dipole about 125 feet long as high as you can get it, and maybe another cut for another band that you plan on using. Forget the $ 100 dollar and more antennas that you see. Then feed it with either 50 ohm rg-8X or even cheeper if you can get it for free some of the rg-6 or 59 70 ohm coax from the computer networks or cable TV companies. Don't worry about it being 70 to 75 ohm stuff. Then get a $ 100 antenna tuner to take care of the matching. The MFJ 948 works well and has a built in SWR meter. You can use the SWR meer in the 757 but it is a lot of trouble to use as the controls on the back.

*The FCC made known its restructuring decision today and it sucks!
*
*I Blame the ARRL!
****

I think you are placing the blame on the wrong entity. If any body needs blame it should be the FCC. In your point of view the whole amatuer world has now come crashing down. If that is your opinion maybe it is time that you not renew your license and give up the hobby. The FCC is thinking beyond your narrow minded thinking and self gratification. They have the insight to realized that left as is, the amatuer radio service will be a foot note in history of radio in the next ten to twenty years. Maybe you will be dead and gone by then and that no longer is of your concern. For the first time in twenty years someone has finally realized the the amatuer radio society in the US will be extend as the Dodo bird by the end of the 21st century. For those of use who will still be arround at least into the middle of the 21st century there is now hope that there will remain an amatuer radio service. I am sorry that you will think of amatures like myself and others who will obtain the full priviledges that the FCC will grant inthe future. These priviledges to you will be obtain by means that in your opinion is cheapened. It is cheapened by the fact that I and others to follow will not have to endure that hardship that you had to. This may well be true. CW, while a means of communications, is no longer the mainstay of amature radio today. Is it becoming a lost art? Most likely. Is it a requirement that high speed proficiency is required for advanced priviledges in other forms of communications? Not hardly. The days where amatuer radio shared bands with commercial maritime ships are long gone and past. Then the need to identify ships in commercial enterpriose and not to interfere with them has long gone. CW will always be a menas of communications. So will AM as well as newer digital forms of communications. The radio service has evolved from a time of experimentation to that of more of a hobby. Experimentation is and will never be lost. Experimentation fosters new ideas. The amature radio service has lost that zeal. I think the service needs an infusion of newer more energetic members. Agreed there will alows be those that are less desirable as some may think. Do we close off the whole bands to only those that will meet a certain criteria? then that smacks of the prejudices of the early 20th century. From an outsiders point of view amature radio has become an elite good ol boys network. Sommething like the exclusive country club atmosphere of the high society.

We now have entered into a new era. I think the FCC has made a bold and daring step in amature radio. While many will applaud, some will shudder in fear of what will happen. Remember this no one is twisting your arm to be a member. It

is become obvious that the FCC went farther than many wanted and to some it may not whave gone far enough. As for me, I am pleased with the ruling. I think it give amature radio a channce to survive well into the 21st and even into the 22nd century. What will happen in the future? No one knows. This has been needed for the last twenty years and now it has come. We have no other choice accept it by be ing a part of it or reject it by not being a part of it. It is your chjoice.

regards
james

WA4BZJ

*
*
*NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new
*millennium. The FCC today issued its long-awaited Report and Order in the
*1998 Biennial Regulatory Review of Part 97--more commonly known as
*"license restructuring." The bottom line is that starting April 15, 2000,
*there will be three license classes--Technician, General, and Amateur
*Extra--and a single Morse code requirement--5 WPM.
*
*"We believe that an individual's ability to demonstrate increased Morse
*code proficiency is not necessarily indicative of that individual's
*ability to contribute to the advancement of the radio art," the FCC said.
*
*Besides drastically streamlining the Amateur Radio licensing process, the
*FCC said its actions would "eliminate unnecessary requirements that may
*discourage or limit individuals from becoming trained operators,
*technicians, and electronic experts."
*
*Although no new Novice and Advanced licenses will be issued after the
*effective date of the Report and Order, the FCC does not plan to
*automatically upgrade any existing license privileges. The
*ARRL had proposed a one-time across-the-board upgrading of current Novice
*and Tech Plus licensees to General class, but the FCC declined to adopt
*the idea. This means that current licensees will retain their current
*operating privileges, including access to various modes and subbands, and
*will be able to renew their licenses indefinitely.
*
*Starting April 15, 2000, individuals who qualified for the Technician
*class license prior to March 21, 1987, will be able to upgrade to General
*class by providing documentary proof to a Volunteer Examiner Coordinator,
*paying an application fee, and completing FCC Form 605.
*
*The FCC's decision not to automatically upgrade Novice and Tech Plus
*licensees means the current Novice/Tech Plus HF subbands will remain and
*not be "refarmed" to higher class licensees as the ARRL had proposed. The
*FCC said it did not refarm these subbands because there was "no consensus"
*within the amateur community as to what to do with them.
*

*As it had proposed earlier, the FCC decided to lump Technician and Tech
*Plus licensees into a single licensee database, all designated as
*"Technician" licensees. Those who can document having passed the 5 WPM
*Morse code examination will continue to have the current Tech Plus HF
*privileges. "If documentation is needed to verify whether a licensee has
*passed a telegraphy examination, we may request the documentation from
*that licensee or the VECs," the FCC said.
*
*In addition to reducing the number of license classes from six to three
*and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*number of written examination elements from five to three, authorize
*Advanced Class hams to prepare and administer General class examinations,
*and eliminate Radio Amateur Civil Emergency Service (RACES) station
*licenses. RACES will remain, however. "After review of the record, we
*conclude that we should eliminate RACES station licenses because RACES
*station licenses are unnecessary for amateur stations and amateur service
*licenses to provide emergency communications," the FCC said.
*
*Under the new licensing scheme, there will be four examination elements.
*Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*question written test to obtain a Technician license; Element 3 will be a
*35-question written test to obtain a General license, and Element 4 will
*be a 50-question written test for the Amateur Extra license. The FCC has
*left it in the hands of the National Conference of VECs Question Pool
*Committee to determine the specific mix and makeup of written examination
*questions. Current Amateur Radio study materials remain valid at least
*until the new rules become effective in April.
*
*The FCC's new licensing plan means someone will be able to become a ham by
*passing a single 35-question written examination. The plan also simplifies
*and shortens the upgrade path from the ground floor through Amateur Extra-
*-especially since amateurs will only have to pass one Morse code test.
*
*Elimination of the 13 and 20 WPM Morse requirements also means an end to
*physician certification waivers for applicants claiming an inability to
*pass the Morse code examination due to physical handicap.
*
*The effective date provides a window of upgrade opportunity for current
*Advanced licensees. Between now and April 15, current Advanced holders may
*take the existing Element 4B, a 40-question test, giving them credit for
*having passed the current Extra written examination. Likewise, holders of
*a Certificate of Successful Completion of Examination (CSCE) for Elements
*3B or 4B dated on or after April 17, 1999, will be able to qualify for
*General or Amateur Extra respectively when the new rules go into effect on
*April 15, 2000.
*
*The FCC disagreed with the League's suggestion that it undertake a
*restructuring of operating privileges along with licensing restructuring.
*"We believe that in light of ongoing discussions concerning implementation
*of new and more modern communications technologies within the amateur

*service community, we should accord the amateur service community an
*opportunity to complete such discussions and possibly reach a consensus
*regarding implementation of new technologies before we undertake a
*comprehensive restructuring of the amateur service operating privileges
*and frequencies," the FCC said in its Report and Order.
*
*In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*Station Call Sign Administrator," something that does not exist under the
*current rules and which was not explained in the R&O itself. An FCC
*spokesperson said the Commission plans to issue a Public Notice soon to
*explain the program and to solicit qualified entities to serve as call
*sign administrators for club station applications.

Hello Gang,

I need a Volume (AF Gain) knob and a manual (or copy) for a
newly-acquired FT-101. I believe a knob from any of the 101 series,
the FRG-7, and the FTDX-400 or 560 will fit.

Please contact me if you can help. Thanks!

What kind of system is used to send so fast? I can hardly get my fist to move at 15 wpm, and when running at 20, I have to use a keyer. Even that gets too difficult at "high speeds" (well, umm, I can't copy any faster that 20 anyway, so it's a moot point, I s'pose).

What's the fastest known straight-key speed?
What's the fastest for iambic and keyer?

This is the elitist good ol boy society thinking. There are those in the service that want to associate with only their kind. It is somewhat of a prejudicial thinking. I have known Extra class lincensee, HAMs, that their sole purpose to get their extra class license was to get away from the novice and general class bands. They talk only in the extra portion. The new ruling now affects that sphere and thus their little minded world has now come crashing down. They have long forgotten that the amature radio service no longer revolves around them. They enjoy paying 2 to 5 thousand dollars for their rigs that should be no more that $600 to $800 max.

Why should an amature licensee have to derive Maxwell's equations? I seriosly doubt that half of the BSEE today that have been out of scholl for more than 2 years just shudder at that thought. Most I know have stated that Fields and Waves was one of the most difficult cousre in EE. I thought very interseting though.

468. Alinco DJ-V5T Handheld

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-03 00:00:00 UTC
From: fjones@ionet.net
Message-ID: <84o3oh$9aq$1@ionews.ionet.net>
Source record: 89993

I just bought an Alinco DJ-V5T handheld radio. It is dual band... 2M and 440.

I like it pretty well but there are two major things I don't like.

The antenna connecttion is a screw-type SMA connection... not the BNC typical of the handhelds I've had in the past. I can't find a source of adapters going from the SMA to either BNC or 239 types to allow me to use external antennas or interface with an external amp. Can anyone cite a source for adapters?

Another unpleasant surprise was to find that I couldn't receive the WX channels.. such as 162.55 FM etc. I understand that the rig can be opened up to allow this, but the subject is not addressed in the manual. Also, I don't know if doing so would decrease rejection of "intermod"... either cross modulation or intermodulation, or bring about any other unfavorable features.

Then manual, like some others I've gotten, are not very straightforward. One must do a lot of moving back and forward between sections to find out how to do things. By-the-numbers examples of the most common operations would be welcome. I'm still on the bottom end of the learning curve, hi.

Can anyone help?

Just an FYI, no one loses any of their current priviledges. There is no retesting to keep your
current license.

An upgrade or new license after the 15th of April will only require 2 bottle tops from any Pepsi
or Coca Cola product and $6.60 sent to the FCC.

OOze back under your rock, Squiggy, you had nothing to do with this. In fact they're still smirking about that belligerant weirdo who made the Ex Farte Presentation. THIS deal was purely a "convenience of the FCC" action to get them off the hook on the medical code waivers, and nothing more. Simlifies *their* lives, regardless of what it does to the ARS.
That is, it simplifies their lives for NOW......

Your bullshit is just bullshit.

There's another: Using the rig as an IF for UHF/microwave work, it's sometimes better to use a frequency other than the popular 10 meter band. I built a transverter that uses a 22-MHz IF.

Then, how do you explain the loss of part of 220 MHz? There was no "public interest" served, only the private interests of two corporations: UPS and Motorola. 20,000 commenters were completely ignored, and whole exercise of "taking comments" was a ruse. The facts are irrefutable...the plan was a 'done deal' before a single comment was filed, and no single comment, no persuasive argument, no amount of reasoning or any massive group of comments would have changed the outcome one iota. So why the waste time on such a sham? Look, I'm not out to change your fantasy...if you want to believe in Santa Claus and the tooth fairy, it's ok by me! Keep writin' to the North Pole...

Zero beat would have meant more to a ham 15 years ago than it does
now. By the way, a good Elmer would have told you to look up the term
rather than ask someone.

Your negative, vituperative and pointless criticism adds nothing to the otherwise excellent discourse evident on this newsgroup and throughout ham radio.

It is interesting that you chose to respond to me on the newsgroup rather than privately. Your public response seemed designed to gain some social status for yourself. Otherwise you would have scolded my ignorance privately.

Certainly you're right. There are many things I should know, but don't. Indeed, the more I immerse myself in amateur radio the more awed I am about the breadth and depth of this hobby. I know only a small fraction of the collective knowledge of the participants of this newsgroup. But, with their help and the benefit of some ARRL books, I'll learn more.

What purpose is served by trying to embarrass newsgroup participants? How does that serve ham radio? If someone seems too stupid, why don't you just ignore him? Maybe, just maybe, with the help of others, he may someday be as smart as you.

Pete

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

>years away)

Sorry the treaty has no such requirement merely that code be tested
for "by ear" and "by hand" the first of those requirements is NOT meet
by the US in the case of at least some of the Deaf. The FCC could have
with a big strech (like the ARRL's no test at all for HF CW access
idea) given a written test of some sort, or 1 char per sec test one
sec long, answer is known in advance if they had pleased. Thier are
reasons to keep 5PM as much as I would have liked to see the FCC
eliminate the requiremnt in practical terms as these sugestion would
have done. But I not am really surprised by what the FCC did

Indeed I belief Ed Metzger my director is wrong in suporting
Code requirements but I do firmly believe that the idea of as much
Code requirement as is politicaly possible is ARRL policy. It is
different from trying to Go down with the ship (all of the ARS) on the
issue of code, but it remians in favor of code testing requirement

499. FT-900 owners: Rear of Face Plate-Whats this??

Bob and those of you,

I am amazed how some love to hammer this topic as if you were smuggling nucular waste through their backyards. I am amazed how some will personally attack another inquiring about how to modify their radios for whatever reason.

I get tired of these "Do-Gooders" that I have to assume have nothing better to do with their time, then to go around the newsgroups shaking their fingers at total strangers who ask these questions as if they planned on interfering with their 911 call to ask for the local time...

In this country you can purchase a hand gun and not one person will ask what you plan on doing with it...ask about modifying a radio and you're sitting on a hard wooden chair in a dim lit room with no windows having smoke blown in your face while being given the 50 questions... Again..it just amazes me?

Jason S. Hulet
W1WOW

"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Followups set to just .policy:

Dave Stadt <dhstadt@ameritech.net> wrote:
>Choping off a pinkey has about as much to do with communications as does CW.

Yet, any night on 40m you can count just as many, if not more, CW QSOs
than phone QSOs. That's an awful lot of non-communications taking place,
Dave.

No, the fines go into the general fund and are not allocated to support
FCC activities. Wish they were. Even more significant is the $billion/yr
the FCC gets in station licenses and frequency auctions also is gone and
not used to support the FCC. This may be an area where a few thousand
letters might help. Let the FCC keep some of its "earnings".

I haven't given too much thought about the restructuring. I'm still
laughing at all the people who were forecasting doom and gloom from Y2K.
Should be a good time to find those hot deals on used power generators.
I'm dreaming of a 10 KW generator powered field day station for 2000!
And I'll even let 5 wpm extras talk on it, if they ask nice. MK

505. Yaesu/Icom Hand Mic Trivia, Can you answer this?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-03 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000103052212.10207.00000946@ng-fs1.aol.com>
Source record: 90030

Hello,

Can you tell my why Icom has decided to go with its square metal "hang on a hook" hand micophone dealybob? Is there some sort of advantage to this design? Is it just so that you can pound a nail in the shack and hang the mike?

Yaesu on the other hand seems to perfer the ole "nub" on the back of the hand micophone like the manufactures of CB radios...

Anyone perfer one over the other, any comments why these two manufactures do things different?

Jason S. Hulet

Hi there...

I am looking for some old electronic music equipment - old synthesizers, keyboards, drum machines, vocoders, MIDI stuff, any old patchable modular or analog synth from 1960-1991, BROKEN OK.

Will consider old Moogs, ARP, Roland, Sequential, Oberheim or others! Prefer knobs or sliders but will consider anything.

If you have something Id be into, please email me privately w price and condition. Thanks in advance!

For eg but not only:
Jellinghaus Yamaha DX-7 programmer box
Roland CR-78 Compurhythm
Con Brio ADS 100, 200 or 200R
Kinetic Sound Prism
Dimension DSDD-320 Spatial Chorus rack
Roland TB-303 Computer-Controlled Bassline
lots of other stuff Im looking for...

508. CW QRP KIT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-03 00:00:00 UTC
From: CU2IJ <rdd87728@mail.telepac.pt>
Message-ID: <84q3vveua1@pthp35.telecom.pt>
Source record: 90033

Hello,

I am looking for a CW QRP transceiver KIT. It should be sensitive, have about 4 to 5W output, easy to build and tune and have vfo covering the CW band. Of course price is also a item of interest.

My questions:
What rig should I chose ?
Wich band (30m or 20m) to have better results?
Should I go for a ready-to-go such as MFJ QRP CW Transeiver?

Thank you for your help

Luis Pacheco

509. Re: Zero Beat -- What does it mean??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-03 00:00:00 UTC
From: Larry Gauthier <larryg@ismi.net>
Message-ID: <38709abd@news.ismi.net>
Source record: 90034

To extend this train of thought a little further...

Back in the olden days (pre-"transceivers"), receivers and transmitters had totally-separate VFO's in them, with no cross-connections to match the receiver's frequency to the transmiiter's frequency (or, perhaps you were a novice who was required to use crystals to control your xmit frequency). If you wanted to transmit on the same frequency you were listening to, you had to "zero beat" the receiver. Or, if you wanted to call CQ and then beginning "looking around" your transmit frequency for a response from some nearby-but-crystal-bound-frequency reply, you would "zero beat" and then hunt from there.

Also... since these old tube rigs generated enough heat to warm a three-bedroom house, they drifted a lot and "zero-beating" was necessary on a regular basis. No 8-digit frequency counters in them thar' days. You also "zero beat" to the frequency reference sites (WWV or CHU) to align the dial on your rigs.

This zero beating was accomplished by using a "spot" switch on the transmitter, which would bias the VFO tube into oscillation without sending the resultant signal through to the finals and out on the air. Thus, this very low-level transmit signal was used within the shack to tune the receiver to the signal being generated from the transmitter's VFO.

Marc,

You can stick your head in the sand or you can help the new hams as an elmer and
try to guide them along. In the OLD days we had elmers to keep us from messing up
but where are they now.
I was a communications officer in the Navy when code was abolished, then army, coast
guard etc. It is the end of an era but not for hams that want to continue the tradition.
Do not be negative but try to think of ways to help get high quality hams and mentor them.
Other countries will be going this way also.

Hello,All
I am new to this NG.I understand the disliking for the licensing restructing,but I had been working no getting my ticket before any of this came along.My studies included cw because I want to get HF priviledges.Soon I will take the tests and hopefully get the tech plus,maybe pass the general written exam.Hopefully I will be accepted.
Anyway,on to my question.I'm considering purchasing a yaesu 757 gx that I have found wich is within my price range,and I like the rig.Also I have found a FP-757 HD poer supply.What price should I expect to pay for the power supply?Is it a good supply compared to the new ones on the market,vs price?Is there some other supply I would be better off with in the same price range?Since I am just getting started I need to keep cost down at this time.I will need to get many other things along the way.Any recommendations on antennas and etc?Also looking for recommendations on 2meter rigs for mobile use, I prefer a mobile over a HT.
Thanks for you response,and any comments on the 757gx.
Rob

514. Heathkit HW-101 60Hz noise

HI Group!

I was checking out my HW-101 over the holidays and I have noticed some odd things.

I was loading up the xmtr using an indoor antenna and a tuner. I had a receiver located in another part of the house. When I keyed the mic, I heard my voice in the other room, but it was
full of 60 Hz noises.

I am using a 50K Yaesu microphone that I wired to the 4 pin connector. My voice is readable.

Since the rig is older than my oldest child, I wonder if the power supply filter caps are dying.
Any replacement parts out there?

Anyone have a similar experience, but found it not to be the PS??

The FCC has always show "special" treatment of pre March 21, 1987 Tech licenses. For example, from the rules it appears that credit for a pre March 21, 1987 Tech license never expires, whereas credit for any other expired license lapses 2 years after the expiration date.

I haven't seen the details, but I suspect that your CSCE would be valid for an upgrade until it expires.

I don't read that there is any such thing as an 'automatic' upgrade. The way I read this (although I have some doubt by the use of the term VEC, rather than VE) is that you show up at a test session and present your license /

CSCEs and the VE's will complete the paperwork for your upgrade. Currently, the only time an upgrade is issued at a VE session is when additional elements are passed. However, under the new rules, some pre-existing licenses / CSCEs would qualify for an upgrade. That was my first reading of the bulletin. However, since they used 'VEC' (volunteer examiner coordinater) rather than VE, I wonder if the intent is that the VECs (i.e. ARRL, W5YI) will offer this sevice (perhaps by mail).

At any rate, I'm looking forward to the next VE session, and in particular the first VE session after 4/1.

Mark

Not hypocritical at all, Ron. I've held this call for 25 years, but
I'd be first in line to turn it in if we could get rid of all this
phony "rank" that permeates the hobby these days.

If you want to outrank someone, go join the Army or the Girl Scouts.

I think you both are wrong. The blame needs to be placed here in
the amateur community. Not much impute from the ARS concerning the
changing of the ARS license system. The FCC read the impute given
them and realized that the 'majority' wanted to dumb down ham radio.

IMHO the "unreliable" aspect of ham radio is what makes it challenging
and fun. How much fun would working a distant country be over the
internet be, knowing full well that there's nothing to prevent it? What
would be the point?

The internet is TOO easy. Pretty soon it will become a cesspool of
sludge for every low-life, social deviate, that can't even get a date,
much less have a life outside of their homes. It will become
increasingly difficult to find meaningful, intelligent, and mature
people to communicate with. This may end up being the savior of ham

radio.

Dave

I think the MP is a superb rig, especially for the price. Also, the DSP noise reduction works extremely well in my rig, and the fan hardly runs at all (opposite of a previous writer). If you add the International Radio mod to the radio you will have a receiver that can't be beat by anything on the market today. My only complaint is that the receiver has a shortcoming in cw mode: with the dsp on, a nearby strong signal will cause the dsp to "pump" and as a result dampens a weak signal that you are listening to. However the rig works great in cw without the dsp on, especially if you have added some of the narrower filters (again I recommend the International filters...better than than the Yaesu ones). Good luck and 73. John, K7JY.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

FS: Superstar 3000, AM/SSB/CW ham radio. This radio covers 3 bands: the standard 40 CB channels , high-CB channels 40 to 80, and the 10-meter band 28.500 to 28.995

Bands can be easily moved around within this range by changing a crystal (there is one crystal per band to be changed)

It has the ability to be shifted +/- 7 kHz around the channel center which creates a continuous coverage across the bands

The radio was not modified in any way, it came with the current frequency arrangement from the factory

Radio has never been used mobile, looks and works very good

No manual and mobile bracket included, sorry

See:

> malonej@c2i2.com

I was about 14 years old in 1955 when the ham radio bug bit. I used to
listen on my home built 3 tube regenerative receiver hooked up to a
folded dipole from plans in the "Handbook". I'd ride my bicycle down to
Henry Radio and drool over the piles and piles of used equipment that
lined the shelves. (sorry Henry, your store just isn't as cool as the
old days) Couldn't afford that equipment, but bought 2N107's and CK722's
to experiment with. I studied the Novice and General manuals till I was
sure that I could pass the tests. EXCEPT CODE! I just don't seem to have
the ear for it. I really envy those that do.

Well time passes and one has to make a living. I made mine in the
electronics industry. Since I didn't have a BSEE, I worked in the
manufacturing side of things. Wouldn't want anybody to think that I'm a
techie. In 1982 my career separated me from my family and one weekend I
went to a hamfest where I learned about an upcoming Novice class. I
signed up, took the class, and got my ticket. The following week, I
proceeded to the FCC office to pass my General test. So 27 years to get
to 5 wpm. Don't think I'll ever get to 13 or 20 in this lifetime.

In April I'll apply for my General license. I apologize to those
Generals that had to pass a 13-wpm test. Call me General/lite if you
want, but like you Jack, "I think I'm qualified to have a General
Class."

Ham radio has always prided itself in the diversity of its participants. We brag about the Doctors, Lawyers, Plumbers and people from all walks of life that participate in our hobby. We even have professionals in communications and electronics that we look to for writing the high tech articles in our Ham publications. Because I haven't kept up with the tech side, I won't be writing any of those articles. Does that make me less deserving of being a General?

CW is not going to die. It's going to be around as one of the many modes of operation available to us. People will continue to learn it because it's fun and a challenge, not because they have to. Isn't that more in keeping with the Ham radio spirit? Does the fact that I choose not to use that mode, make me less deserving of being a General?

There are those that will remain bitter that some of us got the same privileges as they did, but didn't have to work as hard. I can only hope that they will get over it.

Gene Jenkins,
N4JEE

Exactly, there was a time when being able to communicate all over the world using your own shortwave equipment was a fascinating thing, today anyone can pull a cell phone out of their pocket and call almost anyone anywhere in the world. Most people don't ever know what ham radio is (or think it is cb radio) and could not care less.

541. ==>[TRADE?]<== VHF Maxtrac / Radius for UHF Mobiles

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-04 00:00:00 UTC
From: msisco9939@aol.com

Hi:

I have a number of Motorola VHF Maxtracs and Radius Series
VHF Radios that I will be willing to trade for UHF Maxtrac or Radius
Mobiles in the 449-470 Mhz Band.

I also be willing to trade radio to radio of equal or better value...that is
to say if you have a 16 pin logic board UHF radio, and perhaps its a
2 channel High/medium power radio, I will still be willing to offer you
a 2 to16 channel radio with a 5 pin logic board.

Please !! No Hacked or damaged radios unless there is a offset. The
radios I have are either Brand New, or very close to it. All have been
checked and varified to meet or exceed specifications. I also will be
willing to have the radios programmed to your needs. (Please Note)
All but one have all original model escutcheons

I will consider FIXERS or DAMAGED Maxtracs / Radius Series radios on a
case by case basis...I am just growing tired of fixing, and realighning
them after them being subjected to improper Service.

WHAT I HAVE:

(1) D43MJA73A5CK, Serial Series 428FPLXXXX

This is a 45 Watt 2ch Maxtrax 100 Series Radio in perfect operating
condition. Great for Taxi Cab Service. 5 Pin Logic Board

==========
(1) D43LRA73A5BK, Serial Series 778TRSEXXX

This is a 45 Watt 2ch Radius Series in perfect operating condition
Great for ham or Taxi Cab Service. 5 pin logic Board

==========

(1) D33MJA7DA5BK, Serial Series 428PQQXXXX

This is a 25 Watt, 16 channel, Digital Display Maxtrtac 300 132-162 Mhz
Perfect operating condition 5 pin logic board

==========

(1) M43GMC20A2AA , Serial series 799TWEXXXX Radius M120
2ch, 45 Watt (This radio is Brand New) 16 pin Logic Board.

==========

(1) D43MJA7JA5AK, Serial Series 428SVJXXXX (Not original sticker)
32 Channel, 45 Watt Maxtrac 300 in perfect operating 16 Pin Logic
board

==========

(1) D33MJA7JA5AK, Serial Series 428TUY1360, 25 Watt 16 channel
146-174 Mhz Perfect operating Condition 16 Pin Logic Board

==========

(1) D33MJA7DA5CK, Serial Series 428ATJXXXX Factory Modified
SSM head, 25 watt, 16 channel, 16 Pin Logic Board

==========

Anyhow, if interested, Please let me know what'ca have or willing to offer !

Monty

542. Need 2-Meter Mobile Radio Purchase Advice

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-04 00:00:00 UTC
From: Bob Rowlette <robgrow@one.net>
Message-ID: <FjtyOGI42Ya+a8rN0QzhSro92fO=@4ax.com>
Source record: 89767

I'm a new ham (KC8NME) and planning on buying my first 2-meter mobile radio. Although I haven't ruled out other brands and models, I've been seriously looking at the ICOM IC-2100H, Kenwood TM-261A, and Yaesu FT-2600M. All three of these radios are in the same selling price range at my local dealer ($200, give or take $20), so cost isn't really a deciding factor. As far as I can tell, the Kenwood TM-261A has been around for a while, and the Yaesu FT-2600M is a fairly new model.

Any comments or advice would be most welcome.

Thanks!

Bob

as far as I can tell it (The internet)has already turned into an unreliable cesspool.Half the "Information" is outright false and the other half you just aren't sure about!
I agree that the fun in radio is the unexpected opening of bands and getting that special contact.
I have never nor will be a "Ham" ,but I have been DXing for 20 of my 35 years and I still have to rely on the weather and propogation to get some unique loggings.

Those that are bitter are bitter because they feel what they did
is worthless. And they further reinforce the feeling that their
license is worthless by demeaning those that got it via a different
route. This just shows by example that the change is for the good.

If the skills acquired really meant something then, there's no reason
why they shouldn't mean something now.

My GT-550 has taken up smoking. It's apparently hooked on smoking its RF choke that provide the 800V B+ to the finals. Both the schematic and the parts list only refer to it as RFC1; no value is given. Are B+supplying RF chokes in final amps so standardized that no value needs to be given?

Any replacements out there?

> ... well, you are right, very few ever go that fast.

If very few go that fast, where did they come from? I've worked many hams on 40m at over 50 wpm. Also you need to consider, when I normally copy at that speed I don't write much down. I don't need to. If I had to write it all down, I'd probably slow down a bit. But that doesn't effect my sending. My sending is governed by how fast I can read the text, and convert to code. I've always been able to send as fast or faster than I can copy.
>
> 50 wpm being very common? You sure? How comes, that that the record for
> sending of ordinary "mixed text" is 52.4 wpm ???

I find that very hard to believe. I know for a fact I've sent mixed code to a guy copying with a computer to time and was clocked at around 58. And many are faster than I am. I don't see how a guy can copy at 70-100 wpm, but can't send that fast. I've seen very few people that can't send as fast as they copy.Most at those speeds use a keyboard.
>
> By the way, the US team ranked 17 in a field of 18 national teams.

With the present state of mind to cw in the US, I don't doubt it. MK

I cut a disk the size of a drink holder hole from a piece of 3/4in plywood,
mounted the mobile mount and radio to it and stuck it into the drink holder .
Easy to remove and it swivels too.

Anyone know where one could download Icom Manuals??

Can't seem to find mine after the move and the radio needs re-programming.

Thanks.

Hey Loek,
You should be nicer. Your picture saves me from opening my new in the box radio to photograph it. Yes, it looks the same....maybe mine is even
better condition!

First, your photo is not copy righted anywhere that I can tell. Second, accusations of false auction imply slander, which is a jailable offense in the USA. Third, dont you have something better to do with TI's money than to waste time on email like this to the newsgroup in duplicate? Maybe I should report employee A0927429 to the IMS/TIORL police...or
worse, to all my TI buddies in Forest Lane, Lewisville, and Spring Creek!
Lighten up, and happy new year. Oh yea, for auction. One great Uniden HR-2510 in the box. Or, buy Loek d'Hont's if you dont like auctions. Choice is yours, folks.

thanks,
Joe K7JOE

Well Gene and Jack, I guess I should be president of the US with all my experience as head of my company. Just because you are in the electronics field doesn't mean that you should automatically get a ham license.

A number of years ago I petitioned the FCC to allow anyone with an FCC first class license to not have to take the Extra written. It was denied saying that the 1st class license did not cover areas that the amateur extra test did.

So I guess with your logic I should have my extra because I have a first (now general) commercial license.

For real. Who the hell ever heard of a "Loek d'Hont". And how could Loek buy a HR2510 six months ago when they have been out of production for years? I say Loek stole his picture to begin with. K7JOE is the one to buy from, not the Texan with the fake name and story.

Joe,

You probably should have asked Loek if you could use the picture
first. I'm sure he would have said "yes", especially since you
are both TI'ers (current and former).

73,
Dean / K5DH / also former TI'er (now Raytheon).

PS... Lewisville's been closed. Operations moved to Tucson, AZ.

i know you're asking on a single band radio but let me advise you to try
and get a dualband.

case in point. 2m repeaters abound in my area so when i decided to put
up my own, i got coordinated for 70cm and 6m. sure, noone needed 440
before but now they would have liked to have the capability.

the icom 207h is a dualband but displays/works only 1 band at a time and
is a little cheaper than a 'true' dualband. this way you would have the
equipment later on if you find yourself needing 70cm.

> think it is cb radio) and could not care less.

that's the truth.
i still enjoy using my 706 [now a fresh new mk2g] to talk a couple
states away when i'm mobile. that's the most interesting part for me.
i do get tired of some of the local cb guys asking how much it cost.
where can they get one. does a power mic fit on it etc. and the
no radio guys asking me, 'do you think you have enough antennae on
that truck?' man if i could afford an outbacker, i cut the count
down alittle but now i have to stick with 4 tx and the factory rx
antenna.

on a note about cw, i think it's cool but i could never send any
if i had to use anything but the up/down buttons on the 706.
way too used to it by now.

as for low code/no code hams on hf, i've been making hf available
on my repeater for awhile now. always good operating procedures
and hasn't been a pain in the butt yet. hopefully now, they can
get their own rig and work hf when i'm not around to turn on the
remote base.

most of the higher classed hams in my area are stuck on 2m and
wouldn't know the difference if 20 new hams got on hf around
here.

Seems there is more than just one loser in this newsgroup - And pretty
stupid ones too.

Check "Joe's" feedback on his auction web site. Two bad ones and one neutral
out of 8 deals that he did, that's a pretty lousy score. I would not deal
with people like that.
See: http://ratings.auctions.yahoo.com/show/rating?userID=K7JOE&

I'm doing you a favor trying to warn you for a guy that's auctioning an item
which doesn't resemble his own. If Uncle Joe were a real man, he would show
his customers a picture of his own stuff, even if it doesn't look as great.

Put those 5 brain cells that you have to work for a change, and THEN open
that big hole in your face that you call a mouth.

Pitiful.

573. Using Yaesu ADMS to serially interface ICOM instead of CI-V CT17

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-04 00:00:00 UTC
From: David Rich <kgous@swbell.net>
Message-ID: <38728860.C26C2DC1@swbell.net>
Source record: 89798

Disclaimer:
The ADM interface cable and software was designed by Yaesu for specific Yaesu product line only.
Try this at your own risk! I am not recommending that you try this at home. I am not responsible for what you do to your rig or computer! I am just reporting what I did and that it appears to work for me but not necessarily for you. Doing this may void your Warranty.

Hello Everyone,

I recently purchased a pretty new used ICOM transceiver. I wanted to use the radio for contesting with contest logging programs such as NA and Writelog. I looked into the cost of the ICOM CI-V CT-17 interface unit and thought it to be a bit pricey at around $140 new. I have been designing digital logic circuits for quite a few years using mostly Xilinx and sometimes Altera FPGAs and ELPDs so I thought a level translator circuit would be pretty easy and far less than $140 to build. My first guess was to create a quick design using the MAX232 integrated circuit. But first I searched the web to see what others had

done in case I had missed something.

I found the following article by Bob Wolbert, K6XX:

http://www.jps.net/k6xx/icbsciv.htm

You should check Bob's website for other articles related to amateur radio and contesting.

I also found the following web page that shows Bob's along with other peoples CI-V designs:

http://www.plicht.de/ekki/civ/index.html

Well, before I ordered any parts I got to thinking about the ADM interface cable and software I bought for my Yaesu FT-51R a number of years back. A few years ago I took one apart and traced out the schematic which I believe had a surface mount MAX232, at least one Zener

diode, and some capacitors, and resistors. I also remembered that the thing only used two wires to write to and read from the FT-51R. I was

thinking that this design concept must be very similar to the ICOM design concept. I decided to once again take apart a newer ADM interface cable to verify what I had previously remembered. To my surprise Yaesu had changed the design. It looks like they have replaced

the MAX232 with some transistors. Perhaps this was to save on cost but I thought that the concept must still be the same. The main difference that I could see was that the ICOM transceiver used a 2 conductor phone plug while the ADM interface cable has a 3.5mm stereo plug.

I decided to throw caution to the wind and give it a try. Using the Writelog contest program on a laptop, I plugged one end of the ADM interface cable into the serial port of the laptop and the other end into the IC-775DSP. Guess what? It did not work.

I noticed beforehand that the ADM cable used the 3.5mm stereo plug. Yaesu did not use the tip on the stereo plug but the center conductor and shell. I figured that stereo plugs center conductor would not make contact with the tip contact in the ICOM transceiver but it was quick and dirty so I tried it just in case it might make contact. I then plugged a 1/8'' phone plug into the ICOM remote jack and hooked up my q-ball clip jumpers and alligator clip jumpers to what I thought would be the proper two contacts on the ADM stereo plug. This time it worked like a champ! From Writelog I could read and write to the IC-775DSP. Remember, you have to setup the ports in Writelog and also setup the ICOM to make sure that it is on the corresponding address and baud rate. This is a menu selection on the IC-775DSP.

At this point, I headed to Radio Shack to pick up a 3.5mm stereo jack to

make a patch cable with the 1/8" phone plug I all ready had. However at

Radio Shack I was able to find a neat little Headphone Adapter (274-368c $1.99) that adapts 3.5mm stereo phone plug to fit 1/8" mono phone jack. I plugged in between the ADM stereo plug and the ICOM remote jack.

It appears to work fine so far. Of course it has not been checked out over a grueling contest weekend yet.

The ADM interface cable and software presently costs about $40 and the translator circuitry is inside the DB9 connector.

73,
Dave KG0US

Disclaimer:
The ADM interface cable and software was designed by Yaesu for specific Yaesu product line only.
Try this at your own risk! I am not recommending that you try this at home. I am not responsible for what you do to your rig or computer! I am just reporting what I did and that it appears to work for me but not necessarily for you. Doing this may void your Warranty.

Source record: 89800

Hello Steve:

I operate old boatanchor equipment and mostly Collins S-Lines. For the last few weeks, I have had a "loaner" TS-870. At first I thought it was junk...hard to listen to, harsh audio, high noise floor, and a dozen other things that I talked myself into. Now that I've used it a few hours, I'm generally impressed. The DSP in the IF and variable width filters is particularly nice. Bear in mind the newest radio I have had in the shack in a long time is a TS-830 from the mid eighties.

This 870 is used in a digital network for CLOVER mode. It heats up on the TX duty cycle and drifts about 15 hz. For SSB, that is sure not enough for anyone to tell, but for digital, it means you are constantly tuning to the other station. Then he tunes to you....before you know it, knowbody knows where anybody is! A muffin fan on the back stopped that problem. Dial calibration is another of my peeves, but this applies to all the digital displays...the digital readout tells you with great accuracy the frquency upon which you MIGHT be transmitting. MIne is about .05 Khz high. That means that on a narrow digital signal, that you might not hear the calling station at all. I understand there is a calibration adjustment to correct the readout. This being a loaner, I won't be sticking a screwdriver in it though.

That compliment made, I can still hear absolutely everything on the S-Line that I can hear in the 870, so useable sensitivity doesn't seem to have changed much in almost 40 years. The Collins does give up a little selectivity on a crowded band though, and the filters on the 870 are darn nice to work with.

I have not used it on CW.

So, like any radio, you place your bet, shake the dice and toss 'em down the table. It does seem like a lot of money though.

Best of luck with your decision.

How do I hook the radio up in my truck? How can I run the power cable to the radio? Where on the dash do I mount the radio. I also have a "bedliner" on the truck too, I want to get a hamstick mount. Can I drill through the "bedliner" and do it that way. This a nice truck and a female attarctor and don't wan't ruin a nice truck

I have one of these rigs too and have noticed that. My guess is this: would you use a max 12 volt gauge to read the voltage on a 12 volt battery or system? Probably not because the actual voltage may exceed 12 volts. I have observed on several occasions while working SSB that I can light up 2 segments past the 100 watt marking on the meter (measured about 108 watts on an external meter). So my guess is that it is meant to handle some overdrive. Who knows, just a guess. I also don't believe that the 900 performs like and old station wagon!!!

584. Re: Yaesu FT1000MP opinions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-04 00:00:00 UTC
From: TCS <kg5es@ARRL.net>
Message-ID: <84u70g$p09$1@bubba.NMSU.Edu>
Source record: 89809

My FT-1000mp works well. However, I have the same complaint with regard to the display.
I find the blue display on rigs such as the TS-870 easier to see and better yet is the LCD display on the FT-920 or IC-775 and others.

I'm not overly impressed with the DSP. After using military and commercial products with DSP it seems like its on the MP as a sales gimic. It does work for some types of conditions. However, I can do as much and sometimes more with the passband tuing, noise blanker and notch filter (yep, notch filter just to decrease as particularily irritating portion of the noise spectrum) on my 30 year old Drake C-Line ! I feel that one would more wisely spend those dollars on a radio with other features or better IMD or overload block along with an aftermath DSP than with the one that's built in. At least then one could continue to possibly replace or upgrade to DSP when the time comes.

More on the plus side, the rig is great on CW with custom made INternational Filters (used to be Fox Tango) 10 pole each matched 500khz and 250 khz filters. The DSP seems to work well at cleaning up the hiss. I also have the custom 2.1khz SSB matched pair International Filters in the 2.1kz slot, but have retained the collins mechanical filter in the 2.4 khz slot. There is a trick in using these. What I have discovered it that the total blocking, filter loss, and signal quality is best when using the 2.4khz filter in the 8.3mhz IF and the custom 2.1khz filter in the 455khz IF.

In transmitt I've discovered another little trick which may be applicable to other rigs in the same price range. Use a microphone with a nearly flat respone, like the stock handmic, and only slightly tailer the audio in the menus. Or use a tailored mic, like the Heil and set the audio menus flat (ie at 0). I have the best reports with the hand mic and slight tailoring toward the high end but not over 50. Since I'm not much of a rag chewer the hand mic works fine. You'll find the Heil "Gold-Line" to have similuar smooth characteriztics if a desk mic is in order. I don't run the compression more than 10 at the peak when saying the number "5" loadly. And under normal speak it is typically at or below 5.

My fan will turn on and run continously while tansmitting in the middle of the hot summer days if the indoor temp is over 90F and I'm providing someone a long explaination. It a 68F room temp it might turn on rarely while transmitting.

The rig also makes a great 2m and 70cm IF for transverters and the 144Mhz and 440 Mhz displays are built in. Ports are on the back, just plug and play....

Would I have another? Well, I think I'd want to put a Ten-Tec Omni IV, TS-870, and maybe a IC-756 on my desk for a comparision. ....And my basis of comparision?.... Well, it's my old Drake C-Line and the Drake TR-7. Both have some qualities the so far the new ones can't beat
(tuning up a C-Line is not a desired quality,, hi hi !)

I agree with NO9E completely. Another rig that has a good reputation is the IC-753 if you are on a budget. It is also somewhat smaller (about like the FT-890 but earlier vintage) and can be run moble.

If I were to pick from NO9E's list it and price where not a factor I'd go with the TS-850 without question. If you look at the 3 rd order intercept, immunity from nearly strong signals, sensitivity, etc. it really shines and infact will still out perform the majority of new rigs sold today. (Although I have a soft spot for the TS-830, I just love it's audio and like those 6146's!)

Assuming your meter's calibration has not been "modified" I'd say you
probably are putting out what it indicates. This is to say that the radio
is also probably operating outside of factory specifications when it comes
to staying within the FCC limits for sideband distortion products.
That means the fellows up 2 or 3 khz are complaining about you on a day
when the band is crowded and the propagation is good. I would rather not
drive a rig beyond it's limit because it's hard on the components and I
prefer to remain within the FCC technical regs. Besides the reality is that
the difference between 100 and 50 watts when talking to a station via the
ionosphere makes a nearly imperceptible difference.

Every truck and car is different. You might get a copy of the ARRL
handbook for suggestions on mobile setups. There should also be some
suggestions in the instructions/operating manual that came with the
rig.

Basically, this is one of those things you figure out, for yourself,
depending on where in your truck you have room for the rig, and where
it is easiest to punch holes.

If you take QST you might look at the "Web Extra" part of their web
site. There's a nice story in there on a mobile setup.

Well, for those of us working at the Shack, generally, there is little incentive for us to know about the pieces and parts. But there are a few of us who do believe in knowing our stuff and helping the people who come in our doors. For us, the rest of the sales associates give us a bad name. Try coming into my store sometime, see if you can't get all the help you need, and if we don't know the answer, see if we don't find it out for you.

Hans,

Why wait for the FCC to take such action? Just turn in your vanity
callsign now and ask the FCC to assign one to you from the amateur
radio callsign "pool". Show us what a good egalitarian you are.

If you, and others, attach some sort of prestige to vanity callsigns
then it is in your minds only and does not exist in reality.

Personally I'm impressed with the imagination some folks have when I
hear their calls. I remember seeing a vanity callsign and wondering
why the person applied for it until I heard it in a contest. It just
stuck out in the contest and it was easy to remember so I didn't try
to work him a second time.

When did congress pass a law making "Slander" a criminal "jailable"
offense?? Last time I checked, Slander can be punished only in civil court
where the person doing the slandering is sued for damages by the person
being slander..

Please point me to the correct code section so that I may read up on this
new "jailable" federal offense..

Hey Dan, I'm selling my five-year-old Mazda 626 LX (dents, rust, and all) on Ebay. Can I use a picture of a brand new Mazda to show what it looks like? It is just a "representitive" picture of the car.

Look, I have nothing against Joe. But it is rather sleezy to show a picture with an item being sold when that picture does not show the actual item being offered. In the future, Joe might want to use a disclaimer in the text pointing out that the item in the picture is not the item being offered.

By the way, I don't have a Mazda for sale on Ebay (just traded it in on a truck). That story was just made up to illustrate my point.

Joe, the picture does not have to contain a copyright notice to be property. He owns the picture and you do not have a right to take, or use, something that he owns. That is the basic theory behind ownership rights and has been backed up in copyright case after copyright case.

It looks like 75 ohm hardline, typically used for cable TV distribution. It can be used for ham work, and is very low loss. Getting connectors can be a problem, but there are various designs published for homemade connectors.

Nice update to the auction page on Jan 04 (today). Glad to see that you changed the picture to actually show your radio. Of course, my comments, that you quoted in the message above, were referring to the picture you had up before updating the auction page.

Are you looking because you want one and don't need to spend a lot? I found a web site where you can buy a brand new RCA, with install kit, shipped to your door for under 50 dollars.....I just ordered one. Only catch is that youhave to sign up with direct tv for there 19.95 a month plan for a year.....but then again, it isn't any good without that anyway. Wal mart sells the same system for 99.95 and the same install kit for 49.95 so I saved a hundred bucks.....

> threatening its existance!!

Then it's all over but the shouting. Because both alternatives lead to the death of ham radio.

1) Too few hams = no political power = bands get taken away for lack of usage.

2) Easy test/no code = People who have no committment and who come and go at the drop of a hat, mostly going. No sense of membership in anything, no sense of anything at all.

How do you explain ham radio to others, in an age where you can chat with people all over the world in IRC? I can call CQ by opening an IRC channel for any interest I have, and see who responds. From anywhere in the world, really.

And hey, if IRC is too difficult, I can just load AOL Instant Messenger, and do a search for people who are on, for any interest. You show that to hams in the 1950's, and even then you'd see how many would switch to this.

If there's little effort, then there's no sense of pride or of belonging to a community. And you can kiss it all goodbye. People will just use AOL IM, not "unreliable" ham radio.

Hi Guys;
I have for Sale a Mint TT Onmi-6 with matching Speaker Supply and Manual.
Both are in almost mint shape (I hate to use MINT).
They both work fine except a slight carrier in LSB mode.
I am asking for Best Reasonable Offerers, Please consider the shipping costs!
Only serious bids will be even considered!
Original Cost was about $2650.00.!

Could be a bit dirty down below those buttons... I am not sure, but the new HTX series 2m mobile probably has the same mic, so you might be able to get one of the Shack Guys to let you borrow a mic to check if thats the problem. If it is, you can easily order a mic through them, if you don't want to invest all the time to troubleshoot it.

You can get a nice LED 12/24 hour alarm clock with a 10 min ID timer on it from MFJ for $15. If one were incorporated into a rig, the cost probably would be an additional $50 bucks.

This much for fairy tale fiction. Now for some facts:

Results of the third HST (High Speed Telegraphy) World Championship 1999
(18-Apr-99 to 01-May-99 in Pordenone, Italy):

Copy of characters ..... RV9CPV, 360 cpm (72 wpm) ..... World record
Copy of numbers only .... UA4FBP, 540 cpm (108 wpm) ..... World record
Sending characters ..... EW7KQ, 299 cpm (nearly 60 wpm)
Sending numbers only .... EU7KI, 434 cpm (nearly 87 wpm)
Sending mixed text ..... EU7KI, 262 cpm (a notch over 52 wpm)

... well, you are right, very few ever go that fast.

50 wpm being very common? You sure? How comes, that that the record for
sending of ordinary "mixed text" is 52.4 wpm ???

By the way, the US team ranked 17 in a field of 18 national teams.

> be the ability to use the repeater with 2m and 70cm, or more..

Are you sure you mean "repeaters" or did you mean "cross banding"? They are
NOT the same thing. Many of the new mobile (and base) rigs will cross band.
For example a friend of mine uses his HT (in his office) on 70cm to transmit
to his mobile rig in the parking lot. The mobile rig then cross bands from
70cm (receives) to 2m (transmits) so he can get into distance repeaters
without having to run high power on his HT draining the battery.

The major point to remember is the cross banding is normally ONE-WAY only.
In
the above setup the HT ALSO must be able to cross band too. For the HT in
the above example, he had to be able to transmit on 70cm (to the mobile rig)
while
being able to receive on the 2m repeater output frequency without messing
with the radio.

Some of these rigs will not only cross band but will also let you mix modes
as well. For example you can "talk" to you mobile rig on 70cm FM and have
your mobile rig cross band to, lets say, 6m SSB!

I don't know all the rigs that can do the above, but the one I know that
does is
the Yaesu FT-847. I know it works because I have one I use as a base rig.
For FM only use I think most of the major equipment manufactures have models
that will do cross banding.

Probably has something to do with the regulations in each country. For
example
in Canada I think you only have to ID every 30 minutes. And if the reg's
change
then what do the manufactures have to do? The only really good solution is a
programmable timer. Now we are talking more than a on/off button, more like
a few
buttons, and some more rig firmware somebody has to be paid to write. The
manufactures can do the above for maybe $25 per radio. It is most likely
cheaper to get a simple alarm clock at Wall-Mart for $9.95.

Source record: 89883

So if there is any amount of truth to this, the fact that I learned code at all is still thought of as 'no-code' or worthless based on the fact that I can only do 8-10 wpm? Then the fact that I do not have 20 years or 2 hours a day to devote to repetition and learning a conditioned response makes me "dumb"?? I don't understand how code speed and intelligence levels can be compared. I personally know many 5wpm extras and a great number of 0wpm extra class idiots. Something about a waiver? So this is what I'm to look forward to if I dare take my general class test? gee, I really want to get on HF now. I would just like somebody to explain to me how a basic, conditioned skill of repetition makes one's intelligence level increase. Looks to me like a separator for the busy and the retired. (no offense, but the retired usually have more time to spend. Can't wait till it's me!!)
It's like playing the guitar; those who ENJOY it will progress faster than those being FORCED to do it in order to get the carrot. (or those with little time to devote to it) Or hey, you could even compare it to your kid bustin his hump to beat that new Nintendo game.... Is he getting smarter? I don't think so. But after a while, he'll get faster and better and beat it. Give him a cookie 'cuz he has no job and plenty of time to work on it. I really don't see you as a parent, etc. getting excited about your kids new-found, excellent hand/eye coordination.
All that said, let me now say I have never complained about the code requirements and I do work code. I get a kick out of it, but it isn't my preferred method of fun. I KNOW MORSE CODE. Just like everyone else. I can do about 10wpm on a good day. I'm not fast because I don't have time. I think it has it's place as it has been now put, and the FCC should consider bringing in more detail on digital/video/programming maybe?, etc. to change with the times. As I recall, sailing isn't the major course given to sailors these days..... anyway, My problem here isn't the code, it's the morons who have spent the last week calling me dumb, less intelligent, drunk, mentally ill and whatever else they can think of because I'm about to invade their genius thinktanks with my lower lifeform drivel. I'm beginning to wonder if it doesn't boil down to 'I had to do it, why don't they??' I hear that from my kids all day..... If you like code and are good at it, be proud! If you just can't be a speed demon, SO WHAT? I don't see the whole world running out to become cytotechnologists so they can make a massive salary. When someone says they are a nurse or physicians asst., do you hear others immediately say: "couldn't cut med. school, huh?" No, you don't. All you 50wpm guys, are you all Ph.D.? No, you're not. You've simply found something you like and are good at, which is what we all want to do. It just isn't the same thing for everyone. You say you don't want HF to suffer the same fate as CB? Then you agree that CB was perfectly fine until they dropped the license requirement, right? I don't remember any CW tests for CB. I think it was "a couple of bottle caps and 12 bux." The ham license requirement wasn't dropped, just changed. I hear lousy ops on HF all day, From the 50wpm extra

class geniuses. It's not cw speeds that cause that. People, please stop bitching and moaning about something we have no control over and let's make a go of good ham radio.... it's a hobby; something for me to enjoy in my spare time, not a goal I must reach before I die. who cares if the code speeds are lower, I can almost guarantee the there will be a large group of people who will be more than happy to go beyond and become 30wpm ops. anyway. Why? because they WANT to, and they like it. So let's all quit wasting good time with name-calling, insults and complaining, and plan for a new group of radio fans who just might have something intelligent to say. You want good ops? Set a good example. Stop telling new people they can't talk on "your" freq. Stop talking like there's no ladies or children listening, stop blabbing about how great you are and ask if you can help someone, stop gossiping about each other and see if you might make a good friend, and PLEASE, stop insulting an entire class of fellow hams you don't even know! How about "how to prevent uneducated 50wpm extras from trying to 'get me' for something I didn't do." Or "How to prevent 20wpm operators from trying to kill amateur radio." Act like a ass long enough and there will be no one left but you. Your plans may actually work and have the possibilty of preventing ANY more extras, or hams period.

Personally, you're ticking me off with your insults. You don't know me, don't act like you do. Want to judge somebody? Well, you know...

Sorry for the venting in this group, but postings on the subject have been so unbelievable! Hams against hams; what a hobby to take on. I'm sure we'll be overrun with new operators.
73,
Randy, KC8CPK
Amateur Radio Operator, Morse Endorsement. Period.

I would simply suggest for those who disagree with the
restructuring, just return their VE credentials to their
VEC with polite letter stating that they no longer wish
to participate as VE's. If the phone rings, answer it
and explain why you no longer want to be VE and perhaps
refer to caller to someone who is still willing to
administer exams. You might not like restructuring and
the notion of "5 WPM extras," but potential newcomers
shouldn't hamstrung over entry into the hobby.
I plan on keeping the accreditation of the 2 VEC's
that I have worked with.

Ok...

The original post was how to modify a VX-5R for open transmit....

This original post was not by me...

I was commenting on Bobs "do-gooder" comments to the postee...as if he were going to commit an act of terrorism.

I'm not the one "taking this too far" <--- this is my point....

Modifing is about all Amateur Radio has left....

Respectivly,

Jason S. Hulet
W1WOW
"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Hi Steve,

There were major changes above SN's starting with 310xxxx, so you would want one at least above that number. (208xxxx through 309xxxx was the earlier range.)

A common problem with early and mid range TS-930's was with the plated through holes that connect the top to bottom of a circuit board. In my notes, I have that Kenwood changed their process to correct this problem somewhere in the 510xxxx area, but I'm not sure of the exact number.

The particular 930 I have was purchased in March of 1987 and is SN 8010086. From my research, I believe it was one of the last 100 or 150 made. It's loaded with INRAD filters, has a quiter and larger constantly on fan replacing the original on the PS, and has never had any problems other than the original noisey PS fan.

The 930 is still highly regarded by DXer's and Contesters--I love mine and plan to keep it for a long time.

Brian

First and last, it's fun. Sure, it takes some effort to learn, but so do lots
of things, like skiing. And once learned, it's just like listening to somebody
talk. In fact, under some circumstances it's easier.

Whether it should be a testing requirement is another matter - and it's been
decided by the FCC, anyway.

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Our hobby is a technical one and there needs to be a measure of
technical knowledge associated with the license to generate RF. I've
been a tinkerer since I was a teenager, but I must admit that taking the

cover off my solid state HF rig does intimidate me. If I smoked it, I might not be able to afford to have it fixed or replace it. You are, of course, right about accessory equipment building and/or repair.

There is, of course, room in our hobby for the "appliance operators", but I don't expect to find them in the Extra ranks. We need to ensure that the not so highly technically qualified are at least knowledgeable about the consequences of turning up the drive too much and how to match an antenna to their rig. I would hope that if I had a technical question, I could turn to the ones with the 1x2 or 2x1 calls to Elmer me.

Remember when your' call meant something? Remember when it told the world
that you were advanced or extra? The no-coders will become "feel good"
technicians and therefore qualify for a "feel good" Amateur call and we
will have no idea of who is legal on which band which mode. When the
flood gates of no-code hams was opened, the FCC gave them the last of all
the calls remaining rather than creat a new series of calls to seperate
THEM from US. But then with a Jimmy Carter/Bill Clinton Demokracy, all
must share equally in the earnings of a few. I think the time has come
for us to shove the flowers down their barrels' for a change and give
piece a chance.

647. FS: Drake R4C, T4XC + AC4

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <3873A725.42FF@nidlink.com>
Source record: 89649

I have two Drake items for sale.

Drake R4C

Serial # 28---

.250, .500, 1.5 kHz filters mounted on back

Noise blanker mounted inside

Overall, at least a 9/10

The case has some scratches, nothing major. The most critical would agree the top case is at least an 8.5, the rest is fine. Works great, but has had only limited use last 10 years. Been kept primarily as a "tropy" rig.

Includes an original manual.

$500.00 including UPS shipping insured to ConUS. Outside of US would be $525.00 (because of the additional work getting it shipped) plus actual UPS charges (probably $100+).

Also FS:

Drake T4XC

26--- serial number

I bought this to go with the R4C, but have never used it. It is in excellent condition -- 9/10 -- except that it is missing the silver dial insert for the VFO dial.

AC4 supply included.

When I bought it, I was assured that it worked perfectly, but have never fired it up (had about 5 years). So can't guarantee finals.

No manual -- but can provide a T4XB manual.

$325.00 shipped ConUS (that little a.c. supply is heavy).

I have original Drake boxes for these rigs, but I believe the receiver box is marked "R4B" because of a mixup in an earlier sale of my older receiver.

Non-smoker (meant to be informative, not combative).

Thanks,

David, WA7ZYQ
north Idaho

i'm thinking about purchasing around 5 Yaesu VX-400's for my first aid squad. any opinions on these? How do they compare to Motorola GP-300's? How about the Visars? we already have a few visars and love them, but they're also a bit too expensive for our current budget. any opinions on the Yaesu/Vertex HT's would be appreciated. please reply via e-mail to mtabush@monmouth.com.

651. Log Windows 3.06.50 now released on the web!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC

LogWindows 3.06.50 Shipping
Program available from Ham Dealers, CSS and the web
Muscle Shoals, Alabama. January 5, 2000: Creative Services Software announced today that the first update to LogWindows in 2 years, version 3.06.50, is shipping.

CSS is selling the program through dealers, direct sales and the web. The program retails for $49.95. CSS is offering upgrades to current users of the program for $25.00, as well as a competitive upgrade from other logging programs for $35.00. Once the 32-bit version is release, the upgrade price will in be $40 for the 32-bit version ($55 competitive upgrade) from the 16-bit version, but will remain at $25 for the 16 bit version upgrades. Price for the 32-bit version will be $79.95 with free 1.x upgrades.

"If someone purchases or upgrades to LogWindows 3.06.50 now, they'll not only get all the future 3.x upgrades, but also a FREE upgrade to the 32 bit version of LogWindows when it becomes available. So for $25 investment now, they are saving money in the long run", said Rick Ruhl,. President and owner of Creative Service Software.

LogWindows 3.06.50 is now on the web at http://www.cssincorp.com/logwindows. This version is a combination demo/release version, which will allow everyone to look at the new version of LogWindows. Once you have purchased the product you can enter your call sign, serial number and activation key in the registration screen and use the full capabilities of the program. Installing the demo version will overwrite any current version installed on the system.

Creative Services Software is at http://www.cssincorp.com
Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

There has been a code exemption for physicaly handicapped people whos
disability kept them from doing medium speed code,look wow that was
abused.
There wasn't a mental disability waiver because no one is that
disabled.(you could be the exeption).

Please tell us where you went to medical school. My friend, who
is an RF design engineer, my antenna Elmer, and was, for many
years, the chief engineer for an AM broadcast station, tried
for hundreds (maybe thousands) of hours to get to 13wpm. His
most sacred goal in life was to be a general class amateur.
He never made it to 10wpm. Walk a mile in his shoes before
showing off your gross ignorance.

Most backpackers carry 2M HTs and plan to use the repeaters. Colorado has an extensive selection of repeaters, so one could use a 2M HT (1W to 5W) from virtually any higher spot, but probably not from the bottom of a steep valley. Wyoming has fewer repeaters, but probably enough. Buy a repeater directory and program all the local repeaters into the radio, including CTSS, before you leave the car. I would also invest in a telecoping 1/4 wave antenna, rather than the standard rubber duckie antenna, as the rubber duckie antennas are quite lossy.

677. HRO Delaware - Retraction

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: James Giercyk <jgiercyk@inpro.net>
Message-ID: <387406e5_2@nntp2.nac.net>
Source record: 89679

Recently I posted an item warning not to purchase equipment from HRO Delaware. Many of you responded directly to me, and I would first like to thank you all. Whether you told me to 'blow it out my ear' or agreed with what I was saying is not important; we all are entitled to our own opinions. What concerns me are those of you who have never dealt with HRO Delaware before, but may now be influenced by my posting. I heard from many of you as well, and in all fairness, I must share the following.

As you may recall, I said that I hoped some wondering eyes from HRO would find my posting. Well, they did. When I arrived at work this morning I received a call from the salesman who I have been dealing with for many years there. Remember that prior to the last couple of months, I was treated very well. He mentioned that he read the posting, but nothing in response to it. Needless to say, it was an awkward conversation, but I understand that there were circumstances that unfortunately allowed used equipment to slip through the cracks. I believe he was being honest with me, and with that in mind, I would not want to steer anyone away from the Delaware store.

The salesman from HRO Delaware (I would rather not mention his name...I think that is only fair) went out of his way to not only call me, but also my father. He had a bad experience in the past as well. In my book, that is commendable. I do not know if anything that happened was his fault, but taking the bull by the horns as he did is first-rate. I would like to encourage anyone who has had a good experience with any HRO store to respond to this, and that will allow people who do not know HRO to see what they are all about. Thanks for reading and Best Regards,

James Giercyk

Guys, get a life, it happened, you won't change it here. I
know and use code often (as a LOWLY tech+ until the change).
Haven't been able to get to a testing session to upgrade
(they have this tendency to have them on Friday nights at
7:00pm, I get off work at 3:30 and live 100 miles away).
Instead of bitching and moaning why don't you all try to
help someone new learn something instead of being self
centered about MY bands.
Mark
ps: now I know why I like eme, thet don't care about what
class of license you have, if you can put it on the air you
must know what you're doing!

Just how do you make new contacts on 2 meter SSB ?? Do you say "hay
youall anybody got their ears on ?? break break good buddy "

I have been a ham for over 25 years as a TECH and used CQ on 2 and 6 SSB
also 432 SSB. Probably a few times on FM also. While I did not start
the repeater WR4AAA I have been involved with it from the days it was
WR4AAA and is now W4EXU so I am not new to that mode.

I finally decided to go to the low bands to see what was going on a
couple of years ago and last July did get an Extra.

You sound like one of the ones he was talking about. You sure did earn
yours as far as I see it.

Butch, I was K8PXG for almost 38 years before I got K4WJ. You couldn't
tell which class of license I held before I was assigned K4WJ. I
really don't know what your a talking about.

>The no-coders will become "feel good" technicians and therefore

Knowing CW doesn't make a person a good technician. There a many
excellent technicians working at radio and TV stations that don't even
hold an amateur radio license.

>qualify for a "feel good" Amateur call and we
>will have no idea of who is legal on which band which mode.

When I was a novice my call was KN8PXG. The "N" signified I held a
Novice class license. When I upgraded to the General class license the
FCC dropped the N and I became K8PXG. There was no way to determine If
I held a Technician, General, Advanced or Extra class license once the
N was dropped.

Back in those days the 1x2 licenses were coveted because they had less
characters to send and also because, in the past, they were held by
the Old Timers who were usually very knowledgeable operators. (In my
search for vanity callsigns for some of my buddies I've found 1x2
callsigns assigned to General Class license holders. These guys were
assigned 1x2 calls before there was an Extra Class license and they
never upgraded. Unfortunately these guys are dying off and there are
probably only a handful left.)

>flood gates of no-code hams was opened, the FCC gave them the last of all
>the calls remaining rather than creat a new series of calls to seperate
>THEM from US.

"Them from Us" In my opinion we are all amateur radio operators. I
have buddies that passed the 13 wpm general class requirement and
never used CW again. They did not like it. They are excellent
technicians. I bet if they were starting out today they would opt for
the no-code license. Knowing CW doesn't make you a good technician.

Probably made by National or JW Miller. Seems they will smoke if freq of operation is close to resonance.
Probably can use an SWR anaylzer to find the freq's. Seem to remember that the Galaxy III and V had a problem on the high end of 10.
The guy who runs Surplus Sales of Nebraska used to work for WRL/Galaxy and might answer the question. I would expect that any designed for 80 to 10 meters would work if it will fit. Good luck...I just hate such non-identification!

Hi,
Use 6KD6 instead, it is almost same except for the heater voltage, If you use 2 or 4 of them, you can make series and parallel connection to make it work at 12V. The pin out is almost same, just need to make one terminal change. You can get 6KD6 for less than $30 each.
Good luck.

I bought the adapter for $9.95 from AES for the FT-50 then plugged in my Radio Shack Speaker/Mike. It seems to work all right, except it does get hung in transmit occasionally. I used the same mic on my Icom. It was a cheap alternative until I could raise some more funds.

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $350.00 includes extra charger & shipping Unit Retails for $379.99

Kenwood TS-820(S) HF transceiver

This is listed as a TS-820(S) because it is a TS-820 which has had the digital readout added. My understanding is that that was the only difference between the two.

160 through 10 ham bands (non-warc)

Includes:
Digital readout
Both a.c. and d.c. power supplies builtin
Optional CW filter included
Both user and service manuals (original, not copies)

An easy 9 on 1 to 10. Excellent cosmetic and electronic condition.

This fine rig has a full set of features: RIT, i.f. shift, speech processor, i.f. outputs for use with monitor scope and transvertors, tunes WWV at 15mHz, etc. Has great receive audio!

$250.00 plus shipping.

David, WA7ZYQ

Well YOU don't have an EXTRA so why are you acting like a KNOW IT ALL???

You obviously have NO CLUE about VHF weak signal work. You must spend all your non-2 meter FM time on 80 meters with the rest of the lids.

Just because you're a CB type operator on 2 meters FM who doesn't call CQ does NOT mean that it's not the norm on SSB and the usual way of getting a contact. Of course you CB types who operate on specific channels and who bought your rigs at Radio Schlock wouldn't know. I'll bet you also say 10-4 GOOD BUDDY.

Butch Magee wrote:

You mean NOT AFRAID TO SHOW THAT YOU DON'T HAVE A CLUE!!!

Why don't you turn off the computer and spend your time with the rest of your "Good Buddies" on your FM repeater where you likely won't talk to anybody who doesn't pass your rigid rule of not calling CQ?

We don't need people like you in the hobby!

>
>I am thinking of taking the plunge for an FT1000MP, any feedback, thoughts,
>or comments appreciated.
>

Joe,

After owning a fully configured FT-1000MP for several months, I was disappointed in the radio. It wasn't in the same class as the FT-1000D I owned earlier, which is quickly becoming long in the tooth. One tip-off that Yaesu is not correcting some of the problems with the rig is the fact the International Radio is selling two modification kits to bring the 1000MP up to snuff. Then, there is that awful display and the audio tweeking is a pain. Even after getting it set optimally, it still sounded hollow.

Hope this helps. I'm running an OMNI-VI+ right now but tend to favor ICOM radios in general.

73,

Ed, W0VC

The TS-870 has about the finest transmit audio you'll find anywhere on the bands. I receive numerous unsolicited comments on the sound, even from the "audio aficionados" that hang out on 14.180, who rate the 870 as one of the best sounding. I've heard several hooked up to broadcast-quality mics, like the RE-20 and RE-27 and they sound outstanding. They also sound excellent with a basic Heil HC-5.

I have the optional TCXO high-stability master oscillator (about $120) which holds the frequency within +- 1 Hz (usually closer to +-.5 Hz) of 10 MHz WWV. This works very nice for PSK-31, and I would recommend it for digital mode use. The optional voice keyer is very nice, and it helped me set an all-time Sonoma County record in the 1988 California QSO Party (1,356 Q's).

The front-end is a bit "tender", and not as bullet-proof as an FT-1000D or an Omni VI, but the "AIP" control cleans up distortion you might run into on a major contest weekend when the band is wide-open.

In four years I have owned the rig, I have never had to repair a single problem, and I have only needed to open the case to install the options.

He meant that the 900 having a 150w display for a 100w radio is like having an old Stationwagon with a 220mph speedo... or having ANY vehicle with a Mach meter.....it's moot. But reading the posts, it would seem that there are a couple very good reasons and explanations for the spread. I'm sold!

Hi Jeff. Unfortunately, you are an exception to the rule. What rule
you ask? The rule radio shack has about only hireing those with sales
experience, and not wanting anyone with any technical background.

Hi Cortland,

I have the manual, but in the parts list, no value is given for
RFC1 -- the entry only says "plate choke." (I suppose I could
measure it's diameter, length and number of turns and grind up
those numbers!)

THIS IS JUST MY OPINION........
Why do a FEW guys feel that they know more because they can recieve CW at lets say 13 to 20 wpm ? I have had my License now for about 5 years and have never judged a person by the class license they have ALWAYS by HOW THEY CONDUCT THEMSELVES on THE AIR. You can say your a GENERAL CLASS , ADVANCE CLASS or a EXTRA CLASS anytime you want, BUT until you ACT like one your CW abilites really mean nothing......
WHY can you not just try to HELP a fellow AMATEUR who has problems with recieving CW at a faster speed then you can ? Unfurtunately there are a few who still do not get the FULL POINT on being a HAM OPERATOR. I am greatfull to the few HAM's who I meet on the AIR every NOW and THEN who ACT LIKE AMATEURS and DO NOT have PROBLEMS with the fact that I have a TECH class license.I have talked to alot of AMATEURS who take the time to ANSWER a CQ call on 2m SSB or 6m SSB and ask if you are going to upgrade BUT YET still say to you GOOD LUCK AND DON'T GIVE UP.......
Those are the TRUE AMATEURS ......
My point is simple , DO NOT BADMOUTH the few who CANNOT RECIEVE CW at your speed, Try to make it something that they will try to get better at in the FUTURE. Just because someone enters the AMATEUR bands at 5wpm DOES not MEAN they will not keep trying to BETTER THE AMATEUR BANDS IN SOME WAY.....Take the time to think over what you might say to a new AMATEUR because at the going rate there will NOT BE ALOT OF THEM AROUND SOON BECAUSE OF THE NEGATIVE ATTITUDE OF SOME OF THE AMATEURS WHO ARE HERE NOW....
SORRY so long just had to get this of my chest.
73's de (------) call with held for fear of retaliation .....THIS IS WHE YOU KNOW ITS BAD ...

704. TS-50S Computer control

From: kd7ehc@aol.com
Message-ID: <20000105024857.09260.00000712@ng-fs1.aol.com>
Source record: 89708

Pedro,

The Yaesu FT-847 is a fantastic radio. It will absolutely out perform the ICOM. As a receiver, it is exceptional. If you can hear a signal (CQ), you will be able to transmit back, no matter how distant. As with all relatively new technology, some of the radios have some minor flaws. For more information check out:
www.en.com/users/rayd/ft-847/index.html

As with any communications equipment, the antenna you choose will be very important. As for the ft-847, you will not be disappointed!

For Sale All Heath Items PLEASE RESPOND VIA MY E-MAIL

(1) HW-16 C/W Transceiver Complete And Working
With Toggle Switch Added To The Front Cover On The RH Side For A Narrow Filter Modification. All Tubes Tested Good. Asking 65.00 Plus Shipping No Crystals.

(1) HD-1410 Keyer Works (Volumn Seems A Little
Low) Asking 45.00 Plus Shipping.
The Ext Keyer Input Jack Has Been Converted From RCA To A 1/8 Inch Plug. (More Modern)
This Is An Iambic Electronic Keyer With Built In Paddles Adjustable Speed And Volumn An Excellant Compact Keyer Combo.

(1) DX-60 B Cover Has Been Repainted Blue All
Tubes Tested Good Rig Seems To Work Fine. Asking 65.00 Plus Shipping

(1) HR-10B Receiver Not Working So Good. All
Tubes Tested Fine The Unit Receives But Cannot Seem To Tune In SSB Stations. Also Has The Jumper Plug For Jumping The Mute Pins. Asking 45.00 Plus Shipping

I Recently Obtained These Items For The Sole Purpose Of Gaining A HG-10B VFO The Items Are Left To Be Disposed Of. These Items Have Been Stored For A Long Time I Cleaned Them Up Some What And Cleaned The Tubes Sockets And They All Seem To Come To Life. The HW-16 Worked OK For Me I Logged A Few Stations On 80 40 & 15 With It Using One Of My Old Crystals From Another Rig. The DX-60 Loaded Up Fine For Me On 80 CW Where I Worked A Nearby Ham Receiving With My Kenwood.
The HD-1410 Keyer Works But The Volumn Is Much Lower Than My Own HD-1410.
The HR-10B Fires Up And Receives The BFO Will Engage But Tuning In The SSB Voices Is Near Impossible.
I Would Thing An Alignment And Some Cleaning Might Cure This Problem.

I Believe These Units To Be Complete Please Ask If You Have Any Questions I Am Not A Real Knowledgable Person On Heath But Have Research These Best I Could. All Items Sold As Is Plus Shipping From 77065

: -Jay

Yep....many of the "old" tricks don't work quite the same way on the later units....there ARE mods for them too, but don't expect quite the same bandspread.
Also, CMT probably won't work, but considering that the '50 images quite well 90.2 Mhz above(and below as well) the desired frequency, it does not matter much.

I think they are rated at 2kW but I have seen them crap out at about
1kW. Although, they are great for low power applications. My
experience with Dosy switches is that I'm better off doing it manually.

Sagging Shelf Sale:

Alinco EDX-1T manual tuner . Matches the DX-70 series HF + 6M
compact transceiver. As new in box. Has been used less than 1
month, never mobile. A 9.5+ only becuse it isn't NIB $ 195.00 + ship

==========

Kenwood PS-30 Power supply. Looks new. No box or paperwork.
with original Kenwood power harness $ 100.00 + ship

==========

Dentron Jr Monitor compact antenna tuner. Good for at least up to
200 watts. No documentation. Very good cosmetic condition for
age, a 9 at least . $ 60.00 + ship

==========

Gonsets:

GC-105 2m Communicator II AM Transceiver - works - No mic $ 50.00 + ship
Communicator III AM 2m Transceiver works - no mic - $50.00 + ship
Have 2nd Communicator III also same condition same price
(All 3 Gonsets work, but have not been airchecked)

==========

Lafayettes:

HA-35 6m AM Transceiver - Works - meter modification obvious addition
works, but has not been airchecked $ 40.00 + ship

HA-45 6m AM transceiver - works but has not been airchecked $ 50.00 + ship

==========

Realistic RP30/50 Tube 30 - 50 MHz Communications Receiver - AM/FM
Slide rule tuning and socket on front for fixed freq operation. In very
nice
condition. A rare addition for the collector. $ 50.00 + ship

==========

Also have transistor multi-band am only radios.
Inexpensive portables that will receive public service, airband, vhf,
some shortwave.... If interested, details can be sent via email

==========

Shipping will cost calculated from Postal Zone 31523. Shipping wil be
actual
costs of the boxed unit. All tube units will be shipped with tubes pulled,
labeled
and wrapped in foam or other "insulating" material. Every attempt possible
will be made to make the packaging "UPS Proof" and ready for rugby.
Insurance over the standard $100.00 can be added at request of buyer for
actual costs; $.35 for each additional $ 100.00 coverage.

713. Miniature TUBES for Transmit and Recieve FS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000105075235.01696.00000600@ng-ch1.aol.com>
Source record: 89716

Greetings to all in the year 2000!

Whoever thought we'd still use tubes ! ;)

I am now in the process of sorting another 10,000 NOS miniature tubes for your vintage transmitters and recievers. I have others, like the 6146's and other output tubes, but they are buried in the collection right now.

LOTS OF RUGGED *JAN* military types here.

So for now, i'll concentrate on miniature tubes, and some rectifiers like 5U4's and the like.

Please check your mini-tubes in your equipment, let me know what specifics you need, and i'll get right back to you.

I don't advertise too much, I vend usually by referals..

My pricing is very reasonable, way lower than AES and the other big houses.

NO MINIMUM ORDER, shipping 3.00 or less in U.S.A.

Thanks to all in the Amateur radio community for letting me provide this service
for the past two years. I don't advertise too much, I vend usually by referals..

Please respond privately with wants.

Regards,
Joe Pratt, Tubecntral@aol.com

715. Parting out Heath SB-102

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <gzHc4.13$PH4.1460@dfw-service2.ext.raytheon.com>
Source record: 89718
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hello all,

I am parting out a Heath SB-102 transceiver. It's all there EXCEPT for the SSB filter, VFO knob, tubes, drive belts, and cabinet feet. The meter, knobs, crystals, CW FILTER, PA tank components, coils, boards, calibrator crystal, etc, are all available. The cabinet is undamaged, but the paint has lots of chipping (would be nice with a repaint). The front panel is generally nice, with some chipping along the top edge (up where the cabinet closes onto it) and would be a good one to replace another that's hacked up or has damage. The LMO dial has cracks at "15" and "65", but is still in better shape than most used dials. So... what do you need?

73,
Dean / K5DH

Stick it up your ass and you can carry it around just like your two
meter HT.

First let me say that I believe that you should be president of the US. It would be an improvement over what we have. The only reason that I mentioned the envolvement in the electronics business was to point out my continued interest in the field from teenager to adult. Can we expect all Hams to have the level of knowledge that a electronics engineer would have? I don't and I wouldn't expect a doctor or plumber to either. What should be expect hams to know? Code? I think the FCC made clear their feelings on that subject and I agree with them.

You should not get your Extra because you have demonstrated similar knowledge to get your commercial license. When I upgraded from Novice to Technician by passing the General written test, I studied the ARRL license manual. The theory was pretty much the same as when I was a teen, but the rules and regulations needed study. I believe that you should be Extra because you have demonstrated that you posess the knowledge to justify the granting of those prevledges.

I do believe that the old way of testing was better. You had to understand the theory behind the sample questions, that were provided for study, rather then being able to memorize the REAL questions.

720. Racal RA-17 front panel repainting

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: Walt Novinger <wnovinger@home.com>
Message-ID: <BXIc4.4927$G55.70200@news1.rdc1.ab.home.com>

Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

A friend of ours has obtained a quote to make a silkscreen to use in repainting the front panel of the Racal RA-17, and is looking for others who might be interested in having their panel painted and share in the cost of the screen. Tim does _extremely_ nice work, and is among the most perfectionist of restorers I know; I have an R-388 he restored and it is nearly impossible to tell from new.

If you have an RA-17 that is looking shabby, please respond by email and we'll assess interest and determine a final price.

721. Kenwood TS570SG Modification?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-05 00:00:00 UTC
From: kb9e@aol.com
Message-ID: <20000105102235.21999.00000640@ng-fl1.aol.com>
Source record: 89724

Hello all,

I'm building a TenTec 2 meter transverter which I will use with my Kenwood TS570SG. In order to have access to the entire 2 meter band the kenwood must be able to transmit "out of band" on 10 meters up to 32 Mhz. I'd like to hear from anyone who has done the out of band mod to the 570 to see how it's done.

Thanks!!!

Ron

>Am thinking of buying an 870 and am looking for opinions from 870 users.
>
>Steve, W2WX

Steve,

I've had one a little over a year. Until I retired a couple of months ago, I wasn't too active so my experience is still limited.

I do like the radio however. My baseline for comparison was a modified (higher level first mixer) Drake TR-7 with the narrow 1.8 KHz SSB filter and the 500 Hz CW filter.

Needless to say, there was quite a jump in features; built-in speech processor and keyer as well as "dual" VFOs and lots of memories, etc. So for me, it was a big change. For someone who changes his rigs like I change my socks, probably less of a change.

I am not much of a CW man, but this rig is enticing me back to the mode. The keyer is very nice and emulates several of the add-on keyers. There are four message memories and auto serial numbering, if you're into contesting (I'm not).

The semi-breakin delay and the VOX delay use the same control and, for me at least, require readjustment when changing modes. A reasonable VOX delay setting gives a much to fast dropout on CW.

The filtering is good, but there probably is a bit too much reliance on the DSP and too crappy of filtering at the second and third i-fs. (See mods below) The ability to set different CW pitches is nice. Too bad you can't use DSP noise reduction and beat reduction at the same time. Either is effective at its purpose though.

The quick memory system is very handy. Four scratch pad memories allow you to save the frequency and mode with a press of a button. The last four saves are in memories 1 to 4 for instant recall. Great for DXing.

One area of disappointment is in the menu system. As a VHFer, I have plans to use the rig with a transverter. The rig has two antenna connectors and two menus that allow "the TS-870 to become two different radios." I had hoped that each menu could at least select a default antenna port so that selecting menu 'A' would (at least initially) select antenna 'A' and menu 'B' would default to antenna 'B'. Not so. When I get around to it, I'll probably use some computer code to do the changeover.

Another deficiency (in my view) is that you can't set it up to transmit on antenna 'A'' and receive of 'B' or vice versa. If you want to use a low noise

antenna (loop or Beverage) on the low bands, you need to do a mod. (see http://members.aol.com/ve3bmv/TS870mods.htm).

I get good audio reports (unsolicited). The ability to tailor the transmit audio and the split-band processor work well.

All in all I'm pleased. I would have preferred the FT-1000D, but the cost differential couldn't be justified. I don't know about the FT-1000MP. I had a hard time with that choice.

Hope this helps.

73,

Wes N7WS

There are many alternatives for you!

Look at the Premiere/ADI/Pryme accessories - they are all good.

The Yaesu MH-34, though, is also an excellent "mid-sized" speaker-mike.

Huh - that raises a question I've always wondered about, Mark. When operating at 50 wpm, are you always sending pre-printed text? or would you be just as fast if composing it in your head?

One brain to figure out what I want to say and how to spell it on the fly, and one to convert it to cw and send it ... I haven't gotten that process past 20 wpm yet on a single brain. Similarly, decoding cw by ear, remembering the letters until they start to form words, and making sense of the words ... just ain't easy. I keep practicing, of course.

Of course I have that right. I'm not held in bondage to political
correctness. You just did the same above by calling anyone who doesn't
share your view as an "old fart", did you not?

> There's a difference between "liking" someone, and tolerating someone.
> No one is suggesting that you give new a 5 WPM extra a big Barney hug,

There is certainly a difference. I am required to like nor tolerate no
one. No one is "entitled" to my respect. Your "hazing ritual" line is
another which I find offensive. I've decided to neither like you nor
tolerate you.

I've not decided to refuse "good will" to newcomers. I've decided not
your decree of who should sell equipment and throw in the towel. While
prejudice can be a bad thing, you weren't appointed arbiter of who is or
isn't prejudiced or of who should stay and who should leave amateur
radio (leaving more room for the "rest of us").

> If they pass the required FCC tests, they are entitled to the privileges
> as hams, as set forth by the FCC.

Agreed but I don't need to throw in a towel, sell my gear or to like any
one of them.

> Bottom line: your opinion is irrelevant. The law is the law.

Oops. You don't get to decide what is irrelevant and, in this case, the
regs are the regs.

EXACTLY! As well as the ability to draw basic schematics to demonstrate at least SOME comprehension of what makes a radio tick! We may not build as many actual radios as in past years, but power supplies, antenna tuners and linear amplifiers are WELL with the grasp of most. Too many hams in todays world are sending their "appliances" back for service when all they needed to do was remove the cover and replace a failed internal *fuse*! Some are totally incapable of scratch-building a simple resonant wire antenna!

SOME of our current (and FUTURE) ham "experts" consider themselves electronic geniuses when they buy and plug in a new "roger beep" microphone... Some like to ridicule us "old fart" old timers because we resist relaxed rules that ENCOURAGE lowered proof of real, practical basic knowledge of what makes our "hobby" tick, and throw open the doors that seperate us from those who merely see ham radio as a doorway to motormouth on a broader range of frequencies than they currently can...

If that makes those like me different, then thank God for that difference!

Hi all !
I wonder which of these two is better (if any!):
Comet SMA-501 and Diamond SRH-805.

I am want to buy very small antenna for VX-5R.

Tnx for any helpful recomendations.

I have a small Crosley ES-30 receiver that I need help with. This is a 3-band radio (AM, 2 SW bands) using miniature tubes. Three of the 5 wires that connect to the rear panel are torn off. Can somebody help me with a print or tell me where to solder these wires?

One wire comes from a wiper on the bandswitch. Another wire comes from pin 1 of a 12BA6. The third wire comes from one of the antenna coils (looks like the coil for the BCB). The 2 wires that are still on are connected to chassis ground and a contact on the bandswitch. Can anyone help? Thanks for reading.

Thanks for the input. Much appricated.. BTW: Loved your idea of a CW Keyboard.. I'll have to find one, or build one..

Really I'm looking for something that will allow me to get out of my vehicle with the handheld, and communicate with someone else, doing the same thing, at a relatively long distance (in some cases over 80 miles).

I'm willing to go all the way. Since I have two hilltop locactions I can place base repeaters, I was hoping that the following sort of systems (both) could be possible for long distance/extra long distance, handheld communication -

Note: I currently only have 70cm handhelds, but could purchase whatever to make the system work if 70cm isn't viable. Also, if the mobile base acts as the repeater this is ok with me too, as long as the overall system is still useable. Power consumption in the vehicle is not an issue.

Handheld (70cm) <-> Mobile Repeater (x-band?) <-> Mobile Repeater (x-band?) <-> Handheld (70cm)

AND/OR (Hopefully and)

Handheld (70cm) <-> Mobile Repeater (x-band?) <-> Base Repeater <-> Base Repeater <-> Mobile Repeater (x-band?) <-> Handheld (70cm)

<-> : Signifying both directions of communication possible.

Any ideas?

Thanks!

Niaht

Why would today's prospective ham care? All he knows is that it's a shitty
connection. Like when you have a bad phone line. Or there's too much
&^$%&^$% static on the radio.

He doesn't know anything about propagation. MUF is an erotic term from
college. All he knows is that he's "getting bad reception."

I certainly agree that if a picture supplied is NOT of the actual unit
for sale, it SHOULD be CLEARLY identified as such. Surely the basic
REASON for a picture is to provide the buyer with a clue as to what he
might be ending up with - otherwise, what's the point of even
providing a picture?

>attactor and don't wan't ruin a nice truck.

Sure hope the Hamstick itself doesn't ruin it! There are a lot of people that find any antenna other than cell or stereo antenna as repulsing. I know because I've had to "fight" to have even a 1/4 wave 2 m mag antenna on my car. And that isn't even my wife's car.

I would suggest that you mount the radio where it is not in the driver's or passenger's way, yet is easily reached to change frequencies, power output, etc. If I'm not mistaken this radio is remote face capable, so you could even put the radio itself under the seat and Velcro the face to the dash. Just an option that I've heard.

I agree. Using the Internet is fairly easy. But understanding how it
works isn't. Doing something other than using various client apps, such
as setting up a server, creating CGI scripts, developing Web apps and
the like are far harder than getting any ham ticket and going out and
buying the lastest Yeawooodcom radio and getting on the air.

But Java has nothing directly to do with the Internet. It is a
programming language. It can be used via the Internet or not, just like
many other programming languages. You're far more likely to encounter
Perl on the Internet than Java.

Actually I am wondering if this is true or not. The ARRL announcement said all Advanced class amateurs have a window until April 15th to take element 4B to upgrade to Extra on the 15th.

However, after reading through the 70 pages which comprise the FCC R&O, this does not seem to make any sense. On April 15th, all Advanced class amateurs lose credit for element 4A since it no longer exists. The upgrade path after April 15th for an Advanced class amateur is the same as that for a General class amateur, take the new element 4. This is according to element credits defined in the new section 97.505(a)(1) (page 68 of the R&O). So, IMHO, having a CSCE for element 4B will not confer credit for element 4A AND since credit for element 4A is not recognized after April 15th (paragraph 52 of the R&O), how can 4B be applied for an upgrade? It does not exist either after April 15th. The specific language from this paragraph states; "However, licensees who, in the past, passed a written examination element that no longer exists or has been subsumed in a more comprehensive examination element, will have to pass the new element. In this regard, we note that licensees who are required to pass a written examination element that, in part, may include material they have been tested on previously, such as Advanced Class licensees upgrading to the Amateur Extra Class operator license, receives the offsetting benefit that they can upgrade their license class without having to pass a higher speed telegraphy examination."

I did write a note to vec@arrl.org asking if they could explain how this would work. I have not yet received a response.

Hi all,

I'm currently looking at theses two HT and can't take a decision on
which to take.

Beyond the price (almost the same) what's the plus and minus between
the two ?

I already know the technical difference (that one is quad band and
the other not) but that's not what I want to know, I want real experience
with it, on the field use, pro and con, sensitivity....etc

What is really available on the 1.2g bandplan ? Any use ?

Thank's

Andre

> appear to drop.

If it's a 25w radio, you should only see voice peaks of about 1/3 to a
maximum of 1/2 that power on an average reading watt meter when properly
adjusted. About 10 w peak indication using an average reading power
meter would be about right. Of course if you are using a peak reading
meter you will show close to the 25w. Yep, hot audio just causes trash
and splatter. Not to mention the funky sounding audio. An easy way to
set mike gain that will get you close enough for Gov work, is to speak
into the rig and say X-ray over and over, while adjusting the gain.
Start at the least gain and increase until you see no increase in voice
peaks. When you get to that point, just back it back a little bit, and
you're set for action.

Complete Motorola cabinet/rack repeater for sale.
6' x 20" x 19"

Model: b84rcb-1106a
Ser. #: 201cgso324
Exciter power: 20 watts (adjustable)
TX power: 250 watts (adjustable)
Current freq.: 453.025

Installed cards:
Gaurd tone decoder
F1 control module
TX ID card
Station control card
Line driver card

EIMAC rack mounted cavity.
Tuning rack with meter and test leads.
External speaker and microphone.
Meters for plate voltage, and plate current.

This unit is complete and working. I bought it surplus from the state
2 years ago, and decided I dont have time to fuss with it. I will send
a pic to anyone interested...located in Columbus, Ohio.

Please make offer.

> Gary
> AB5RM
Naw, Thats just because they run them a bit hard. It seems most of
those brand amps overrate the power they should really do. They will do
what they say, but shouldn't really be run that hard. The 811 amps they
sell are a good example. The 80b will do a good honest 850 watts all day
long, with no problems. But get em over a KW, which they will do in many
cases, and you put more stress on the componants. Just run them at a
normal level and you shouldn't have any trouble. I think it's a pretty
good amp for the money. Way better than the 811 amps. I wouldn't worry.
It's hard to kill a 3-500 when properly run. In the example of the 811
amps, they have a 3 tuber and a 4 tube version rated 600 and 800 w
respectively. Thats too hard on them. They really should be run at 450
and 600 w respectively. You shouldn't try to push more than 600w out of
four 811's. Look at a collins 30 L1. They run the normal 600w or so with
the same 4 tubes as is proper. The 80b, the same. Rated a bit more than
what it should really be run at. But the 80B is 500w plate dissapation,
compared to 260w for the four 811's. Much stouter tube selection. I'd
thought about getting one myself for a while to have a 160 meter amp. My
henry no 160...But now I've decided to go solid state for my next amp,
and I'm likely gonna build it myself. MK

> 73
> Spencer KC2TX
Does it unkey if you unplug the keyer? Could be a keying section
problem, but also could be some hash in the keyer itself that is keying
the rig. I've had it happen before. I use a homebrew keyer. After a few
years one of the transisters got a little leaky or something, and caused
problems like that. I traced it down, and changed the transister, and no
more problems. If it doesn't unkey when the keyer is unplugged you have
a radio problem. I have an 830, but never that problem yet, so not sure
on potential reasons without looking into it. MK

The icom. I think it's better built. The track record on those is very
good from what I hear so far. I have a friend who made the same exact
choice about 2 weeks ago. I recommended the icom, but let him decide
after asking a bunch more people. He went ahead and got the 706. So far,
he hasn't been sorry. MK

781. F.S. TS-50 + 230 Tuner $775.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-06 00:00:00 UTC
From: Richard Fitzgerald <r.fitzgerald@worldnet.att.net>
Message-ID: <3874EF3C.A100B67B@worldnet.att.net>
Source record: 89562

New vehicle forces me to part with my TS-50 and SGC-230 automatic tuner. Both
units would rate a 9. Included is the MB-13 mobile bracket, hand mic, power cord,
interconnect cables from the radio to tuner, both manuals. Everything works.
Excellent mobile setup. Will tune a whip while in motion, or you can throw a long
wire into the nearest tree when stopped. Radio will transmit out of ham bands for
MARS operation. Asking $775.00 shipped UPS ground.

I can accept MasterCard or Visa, or certified funds.

--> That'd be silly. It's exactly those millimeter wavelengths that commercial interests are coveting. HF isn't used much in commercial communications, with a few exceptions -- the only interest most companies have in the HF bands is how much trash their electronic-ballasted fluorescent lamps are allowed to dump there.

I am buying old DIRECT TV DSS systems that you no longer use. I will purchase access cards by themselves, receivers with access cards or complete systems. Please email me with the receiver brand or model and which type of access card it has. If you are unsure, let me know the number below the bar code on back. It should start with "H", "HU" or "F". I'll be able to determine what type it is from this information and can make you a prompt offer.

Thanks,

Mark

You dont need to restructure the call signs to know who the new hams are,
just listen for anyone using 10-codes, CB lingo, and echo mics. You'll be able
to spot the new idiots a mile away.

That's right!! You'll be able to tell them from the old idiots who
persist in bad-mouthing any newbie who doesn't 'fall in line'
with what they 'had to do' to earn their wings.

Sorta reminds me of the old farts who sat around when I was
a kid telling old WWII stories about how they each won the war.

Just as pathetic, and just as pointless.

The real shame is there will be a few of the newbies who will be
mesmerized by the old farts, and become one...

since you have 70cm handhelds;

put a dualband mobile radio in your car,
have it 2way repeat from you 70cm simplex freq over to 2m
repeater split and back.
the base repeater will repeat it out and anyone else with
the same setup will be able to do the same.

and you can just change the 2m freq in the car to match
the other car's 2m freq to 'cut out' the base repeater
if desired/not needed.

the end

should be a plug in the firewall that you can
remove to run the power directly to the batt.

put the main unit under a seat. mount the head
unit on a gooseneck. get a magnet mount mic 'hook'
so you can put it on the backside of the head unit
mounting bracket.

that's most of it. works well in my dakota.

Hello...

Since the PRC-74 I've got is upper sideband only (yes, I knew this when I got it :-)), and there is no way in he@# anyone is going to talk to me on 40m or 80m usb, does anyone have details on modifying it for lsb? In particular, I understand that there are a few lsb filters around here and there that can be installed to accomplish this.

I guess what I'm really needing is a source for this filter...or any other hints on this from others that have performed the mod...

Please send any helpful info! Tnx es 73!

>> ...the FT-50 has a somewhat unique 4 conductor mike connector...

>And all the Premiere/ADI/Pryme speaker-mike models that I
>recommended come in that connector.

In addition, Yaesu sell two different adapters from the 4-conductor plug to the older standard two-jack system. One is made specifically for the FT-50, and hooks over the base of the antenna to provide a firm place to plug a standard speaker-mike into. (But it doesn't fit antennas other than the stock Yaesu one). The other is just a wire pigtail with a 4-conductor phone plug on one end and a two-jack blob on the other end. It works with the FT-50, VX-1 and probably VX-5.

With these, you can use just about any speaker-mike (except one built for the non-standard Kenwood plug pattern).

Well, it's been over 20 years since I had this problem, but I recall that there was a very good article in the Kenwood newsletter describing how to fix it. I remember that there were cold solder joints in the display unit and that mine worked perfectly after reheating the connections as described in the article. Check with International Radio. They may still have copies of the old Kenwood newsletters available. By the way, there were MANY changes to the 820 described in the newsletters, and the 820 was not a bad rig with all the mods installed. There was also a good QST article regarding adding the WARC bands to the 820 and that one worked very well also.

<dmbrodbe@mtu.edu> wrote:

Don't underestimate how quickly/cheaply devices can be produced. Take
the Direct Broadcast system for example. Inexpensive was they key; they
ended up with a stamped metal dish and a $35 LNB (net cost). You can
still spend a few hundred on an LNB for TVRO, yet one for DSS is a tenth
of that to manufacture.

Money comes from other areas as well; just because the GPS capability
costs aren't absorbed by the end user doesn't mean production costs
haven't been offset elsewhere. Some group like Motorola could step in
with their "Jupiter" chipset and agree to produce a
cellphone-integrateable circuit for very little so long as certain
advertising agreements are adhered to. (ie: 'Motorola' printed on most
every phone out there, despite who made it).

Also, when you are talking about something as expansive as the
cell-phone market (I read there are more of them installed than TV's!
Projections claim that there will be 3 cell-phones per TV by 2005).
Individual unit production cost drops sharply when you are producing
millions and millions of them. Personal GPS's just aren't selling in
these numbers.

Just my .02 worth of banter...
73

> --> Well, cell phones are about to. I'm still wondering how

Hi FS!

Wow! These are great old radios. I am surprised there's not a
dedicated sight up with eiter all of this info, model diff's (120S,
520, 520S, 830S, etc.)

I seem to recall finding a place online that will do all update mods
and really peak and tune these rigs for about $125 plus shipping.

If anyone reading finds this info, I certainly would appreciate a
follow up post.

I saw a recent ebnay 830S mentioning a diode replacement with HOT
carrier diodes or something. Receiver's pretty HOT already, perhaps
this enhances it somehow?

Just looking for some thoughts and opinions on the Yaesu FT-8100. If you do or don't like it: why?

Also, When is cross-band repeat mode, can you control it remotely?

E-mail or post, whichever you prefer. Thanks in advance!

You should not fuse the negative lead. It doesn't do any good anyway. If this fuse opens up, you are likely to continue to have a return path for the current through the shield of your coax and/or your radio mounting bracket. This can result in damage to your radio as much higher currents are present than PC board traces were designed to handle.

James, you are an individual with class.
I've purchased items in person and via mail order from HRO Salem (NH).
My experiences with them have always been positive; I would do
business with any HRO I happen to be near.

Though I may only be spending a relatively small amount each time,
I've always felt I was given the same attention and service received
by folks who routinely spend thousands of dollars at a time.

Check out some of the reviews on the two radios. The Yeasu is definitely a better built radio. I wrestled with the same decision for a while. I checked out 1.2G repeaters and didn't find anything close enough to my home. So, I then looked at the T8A and decided to go with the Yeasu just because it felt sturdier and sounded better.

What does that mean? The 706 isn't much larger(if at all) than the FT100.
My 706(MK not) is a fine radio.

Re power: Run the cables through the firewall (there is usually a way to
do it) and connect direct to the battery, with fuses on both plus and
minus wires at the battery.

All else is very vehicle dependent.

I put mine in a 96 Honda Civic. The rig is behind the driver's seat
with the front panel mounted at the dash. For that you will need the
optional remote kit. But with a truck, you might be able to get the
entire radio up under the dash.

I use Hustler antennas on a fold-over mast in a custom mount attached to
the frame and coming up behind the rear bumper. The Hustlers and
Hamsticks work well on 20 and up; for 40, and especially 75, you will
want a bigger/better antenna (e.g., Bugcatcher or screwdriver).

The real fun is often attenuating all the noise on receive!

Phil

Clint, one of the "details" here is that the FT-50 has a somewhat unique 4 conductor mike connector. I've seen them on my FT-50/VX-5R speaker mike and on the ADMS-1E software cable. Unless he wants to wire his own, most mikes will not work with that HT.

Yes, new callsigns should be restructured too. They should look like the
old CB callsigns of the early 1970's. This will work out OK because the
restructured hams won't be much smarter than your typical CBer anyway.

I have both the Yaesu mike and a MAHA one. Each has it's advantages.
The MAHA is larger but has a much nicer sound. The Yaesu is more
rounded and smaller. I also looked at the ADI/Pryme and MFJ ones. The
dirrerences are slight. If you can, go someplace where you can try
them out.

RESTRUCTURING.
> >

There isn't any change there with restructuring. New licensees
will be issued systematically calls appropropriate to their license
class. Being that no NEW license classes were created as a result of
restructuring, the current system will continue and those licensed
after April 15th can apply for vanity calls once they are in receipt
of their license. I.E. a new technician class licensee who is issued
a license after April 15th can apply for a vanity call from Groups
"C" or "D" once they have their original license. Being that the
advanced class license will no longer be issued after April 15th
to NEW applicants, new applicants will have to upgrade to extra
to be elgible for group "A" or "B" calls. So a NEW extra class
licensee after April 15th will receive a systematically assigned
from group "A" if they are still available in the applicant's
region, or a systematic call from group "B" if group "A" calls
are no longer available in that region. But the licensee can apply
for ANY unassigned call that is available to amateurs within CONUS
if the applicant is applying from CONUS.

*changing of the ARS license system. The FCC read the impute given
*them and realized that the 'majority' wanted to dumb down ham radio.
*
*
*
*D
****

If you took time to read the original docket you may have read the section where they sought comment on how many license classes should there be. The FCC even last August was leaning the the possibility that three classes of license was a possibility. There is no blame on anyone. This i ssomething that was bouond to happen. No matter how unpopular it may be it was going to happen. At this point you have only two options, accept it and keep operation or reject it and let your license expire.

*>
*> *
*> *
*> *NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new
*> *millennium. The FCC today issued its long-awaited Report and Order in the
*> *1998 Biennial Regulatory Review of Part 97--more commonly known as
*> *"license restructuring." The bottom line is that starting April 15, 2000,
*> *there will be three license classes--Technician, General, and Amateur
*> *Extra--and a single Morse code requirement--5 WPM.
*> *
*> *"We believe that an individual's ability to demonstrate increased Morse
*> *code proficiency is not necessarily indicative of that individual's
*> *ability to contribute to the advancement of the radio art," the FCC said.
*> *
*> *Besides drastically streamlining the Amateur Radio licensing process, the
*> *FCC said its actions would "eliminate unnecessary requirements that may
*> *discourage or limit individuals from becoming trained operators,
*> *technicians, and electronic experts."
*> *
*> *Although no new Novice and Advanced licenses will be issued after the
*> *effective date of the Report and Order, the FCC does not plan to
*> *automatically upgrade any existing license privileges. The
*> *ARRL had proposed a one-time across-the-board upgrading of current Novice
*> *and Tech Plus licensees to General class, but the FCC declined to adopt
*> *the idea. This means that current licensees will retain their current
*> *operating privileges, including access to various modes and subbands, and
*> *will be able to renew their licenses indefinitely.
*> *
*> *Starting April 15, 2000, individuals who qualified for the Technician
*> *class license prior to March 21, 1987, will be able to upgrade to General
*> *class by providing documentary proof to a Volunteer Examiner Coordinator,
*> *paying an application fee, and completing FCC Form 605.
*> *
*> *The FCC's decision not to automatically upgrade Novice and Tech Plus
*> *licensees means the current Novice/Tech Plus HF subbands will remain and
*> *not be "refarmed" to higher class licensees as the ARRL had proposed. The
*> *FCC said it did not refarm these subbands because there was "no consensus"
*> *within the amateur community as to what to do with them.
*> *

*> *As it had proposed earlier, the FCC decided to lump Technician and Tech
*> *Plus licensees into a single licensee database, all designated as
*> *"Technician" licensees. Those who can document having passed the 5 WPM
*> *Morse code examination will continue to have the current Tech Plus HF
*> *privileges. "If documentation is needed to verify whether a licensee has
*> *passed a telegraphy examination, we may request the documentation from
*> *that licensee or the VECs," the FCC said.
*> *
*> *In addition to reducing the number of license classes from six to three
*> *and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*> *number of written examination elements from five to three, authorize
*> *Advanced Class hams to prepare and administer General class examinations,
*> *and eliminate Radio Amateur Civil Emergency Service (RACES) station
*> *licenses. RACES will remain, however. "After review of the record, we
*> *conclude that we should eliminate RACES station licenses because RACES
*> *station licenses are unnecessary for amateur stations and amateur service
*> *licenses to provide emergency communications," the FCC said.
*> *
*> *Under the new licensing scheme, there will be four examination elements.
*> *Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*> *question written test to obtain a Technician license; Element 3 will be a
*> *35-question written test to obtain a General license, and Element 4 will
*> *be a 50-question written test for the Amateur Extra license. The FCC has
*> *left it in the hands of the National Conference of VECs Question Pool
*> *Committee to determine the specific mix and makeup of written examination
*> *questions. Current Amateur Radio study materials remain valid at least
*> *until the new rules become effective in April.
*> *
*> *The FCC's new licensing plan means someone will be able to become a ham by
*> *passing a single 35-question written examination. The plan also simplifies
*> *and shortens the upgrade path from the ground floor through Amateur Extra-
*> *-especially since amateurs will only have to pass one Morse code test.
*> *
*> *Elimination of the 13 and 20 WPM Morse requirements also means an end to
*> *physician certification waivers for applicants claiming an inability to
*> *pass the Morse code examination due to physical handicap.
*> *
*> *The effective date provides a window of upgrade opportunity for current
*> *Advanced licensees. Between now and April 15, current Advanced holders may
*> *take the existing Element 4B, a 40-question test, giving them credit for
*> *having passed the current Extra written examination. Likewise, holders of
*> *a Certificate of Successful Completion of Examination (CSCE) for Elements
*> *3B or 4B dated on or after April 17, 1999, will be able to qualify for
*> *General or Amateur Extra respectively when the new rules go into effect on
*> *April 15, 2000.
*> *
*> *The FCC disagreed with the League's suggestion that it undertake a
*> *restructuring of operating privileges along with licensing restructuring.
*> *"We believe that in light of ongoing discussions concerning implementation
*> *of new and more modern communications technologies within the amateur

*> *service community, we should accord the amateur service community an
*> *opportunity to complete such discussions and possibly reach a consensus
*> *regarding implementation of new technologies before we undertake a
*> *comprehensive restructuring of the amateur service operating privileges
*> *and frequencies," the FCC said in its Report and Order.
*> *
*> *In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*> *Station Call Sign Administrator," something that does not exist under the
*> *current rules and which was not explained in the R&O itself. An FCC
*> *spokesperson said the Commission plans to issue a Public Notice soon to
*> *explain the program and to solicit qualified entities to serve as call
*> *sign administrators for club station applications.

I would recommend the ICOM IC-2100. I just bought mine being a fairly new ham on a budget and found that radio suits me very well. Plenty of power, plenty of memory channels and a large display. I have friends in our club that have dual-bands that like it more.

Also try my web site... I am making a review of that radio. Nothing professional just a review that is unbiased.

Source record: 89614

I had the same problem, as have many other 820 owners I understand. I fixed my by cleaning all the contacts with emory cloth. It's very easy really as the whole unit is simply a plug-in that can be accessed by taking off the top of the rig. Take the whole display out and roughen all the plug pins and every place the unit makes contact with the chasis so that you're sure you have a good ground.

Of course, the problem might be something else, but doing what I have suggested doesn't cost anything and certainly won't do any harm. Just make sure that the multipronged plug is lined up properly when you reinsert it (It's too easy to be one pin off).

Naw, I'm just usually sending whats in my head. Thats easier than reading text from a book and sending. But the time I mentioned sending to the guy at 58 wpm was reading from a book. I think one of my drake service manuals or something like that. He was testing me using his computer to copy. That was in the mid 80's or so.
>
> One brain to figure out what I want to say and how to spell it

> I keep practicing, of course.

After a while you don't have to do that though. Thats the whole trick, it's gotta be drilled in good enough not to have to think about it. You don't think about what you say when talking. Cw is the same after a while. Same when copying, one reason I say copying fast is easier than slow, is just that, it moves fast enough that you don't have to remember too far back. Very important considering you are not usually writing it down except for important stuff. It's more like normal conversation. Yep, just keep practicing. You'll get there. Thats 95% of it. The other 5 % not having a mental block thinking it should be hard. Thats whats kills many. They think it should be hard, so usually it will be. If you think it's gonna be easy, it will be after time. Just a state of mind.

837. Using Yaesu ADMS to serially interface to FT530

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-06 00:00:00 UTC
From: donw@pe.net
Message-ID: <38743fca.16291008@news.pe.net>
Source record: 89618

I see where people have interfaced the Yaesu ADMS cable and software
to the ICOM. Has anyone tried to use the ADMS to interface and
comunicate with the FT530. Te 530 does communicate serially with its
display mike and I believe the same mike was used on at least one
later model of handheld. What do people think?

Greetings,

I need the RF strip section from a Bird or similar watt meter.
We would like to monitor RF power or SWR to protect our repeater.

Basket cases OK, if the RF and N-connectors are in good shape.

Bird, Struthers (URM-120), Motorola, etc, come to mind..... Others?

73,

Al, NW2M

840. Does Standard Still Exist?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-06 00:00:00 UTC
From: Damian Boune <niaht@my-deja.com>
Message-ID: <852lb4$5ml$1@nnrp1.deja.com>
Source record: 89621

I was looking around the radio shops in the internet and found one with a dead link to "Standard". I searched around a bit, and ended up at Yaesu's page. I opened the "Standard Land Moble Products Page" which has a logo at the top with the word "Standard" under it. I then clicked on the "Products" link, and there was what looks like a "Standard" logo. I clicked on that and it took me to "Vertex Standard" which says it is under construction.

Can anyone tell me if this is the "Standard" radio company I was thinking of that made the C5608DA? Or are they no longer?

Thanks!

Damian

I have been told that in order to use my recently acquired Collins 30L-1 Amplifier with my Kenwood TS-430, I will have to add an external relay system to prevent the amplifier from sending 110 volts back into the radio. Can anyone confirm this and also give me a schematic to build the relay circuit? Any help will be greatly appreciated.

Yes, there are people who monitor them according to the wilderness protocol. I had my Boy Scouts in the Sierras for a week. We used the wp frequency on 2m and didn't broadcast durring the time reserved for emergency use.

At the end of the week, another ham came on the air and said he had been monitoring us all week long and wanted to know what we had been doing. (We also had a group of older scouts 100 miles away on a river trip. We would make contact with them at lunch time and dinner time.)

I explained that we were on a week long hike and the others were on a week long rafting trip. He said that he was part of a search and rescue group and was just curious.

But, it was nice to know a S&R group was monitoring.

854. Re: Amateur Restructuring Announcement - RESULTS?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-06 00:00:00 UTC
From: "T. Smith" <nospam@nospam.com>
Message-ID: <3874A0B3.52A6@nospam.com>
Source record: 89635
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

What results will restructuring have, what questions will be raised?

1. Where will all those antennas be erected now that zoning laws are a matter of fact in practically all communities and housing developments across the US. Will amateur antenna erection issues be subject to Supreme Court review and rulings.

2. Will the expected rantings and ravings of a hoard of cb'ers propagated world wide on the HF bands at the eleven year sunspot maxima make citizens and governing bodies of the US appear as chumps and cause a loss of face in the global community.

3. With the expected increase of operators will the FCC impose a reduce power limit so as to maintain appropriate RF field intensities in areas of human habitation---for the children.

4. Statistically speaking, will the increase of illegal activites that will accompany the increased population of amateurs be managable by the FCC---if they can't afford (funding, manpower) to manages the mess that they created what then.

5. What restrictions in advanced design of amateur equipment will be imposed now that manufacturers have been stimulated to produce by the creation of larger market demand.

6. Will amateur radio disappear into the 'noise' by a future FCC Report and Order that all amateur activities cease and desist and resort to channelized control of spread-spectrum modulation techniques to hide and get rid of the dirty little mess. Pass codes will be issued instead of callsigns to activate strictly regulated (FCC) communicators (ex-tranceivers).

7. Will all amateur HF allocations be eliminated and relocated to spectrum translators aboard amateur satellites operating at milimeter wavelengts.

8. Will amateur equipment contain embedded identifiers and GPS locators to control errant amateurs---computer databasing and issuance by violation notices by FCC or ARRL Official Observer staff (by FCC approval) at the mere push of a button by decoding an encrypted data burst piggy-backed with amateur transmissions.

9. Will we tire of 'smokey' reports from one end of the continent to another.

10. To ease congestion, will amateur VFO's (slyda's or sliders) be eventually outlawed and be replaced by channel selectors.

11. Will older amateur equipment at some future date be outlawed as the transition to controlled radio communications is established.

12. After April, 2000 will we find that an obtaining and possessing an amateur license from some third world country (like Somalia) where testing is more rigorous convey greater prestige to it's holder than to be licensed in the US.

13. To Be Continued...

James,

Glad to hear your difficulties with HRO have been worked out to your satisfaction. I've been dealing with HRO off and on for MANY years, and I've never had a problem with any of the stores I've dealt with (and that's at least five of them, including Delaware). I've always been pleased with their customer service, pricing, and friendly sales people, and their free shipping on orders over $100 (do they still do this? It's been a while since I bought anything new).

Source record: 89639

Hi,

I need the MARS/CAP mod for the TS570SG in order to be able to drive my Ten Tec 2 meter transverter to cover the entire 2 meter band. The rig has to transmit 28.000 - 32.000MHz to do cover it. Kenwood will not release the info. Without opening up the radio I only have 144-145.700 2 meter coverage. NOTE: I have seen the mod listed on QRZ and another site for the TS570D and DG models and they are completely diferent mods, so this needs to be specific to the TS570SG model.

Thanks!

No, I did NOT say that anyone that does not share *MY* personal views is
an old fart. I said that anyone not willing to be open minded, tolerant
and non-prejudicial, was an "old fart" Maybe I used the wrong word.
Maybe I should have just said "Bigot". Look up the definition, and then
```

try to tell me that many of these guys (including you it seems) do not
fit the definition. And THEN tell me that I'm "arrogant". If the truth
hurts that much, maybe you should re-evaluate your point of view.

Bummer! The world is full of people that may not agree with your view of
things. I see it as you have 2 choices. Accept, tolerate, and
understand, or stick your head in the sand and be miseable. Which will
it be?

As to liking me or not, that is your choice as well. I certainly won't
lose sleep over it. As for tolerating me, well, as long as you continue
to read, you'll have to tolerate me, and others, who don't share your
views. That's life. Since your arguments thusfar have been based on
opinion and emotion, you cannot "win" the debate. If you'd like to
debate this on a factual basis, I'd be up for the challenge.

> radio (leaving more room for the "rest of us").

I never implied that I was the all mighty "arbiter". The prejudice is
blatently obvious in those who will not tolerate others' activities,
simply because they don't fit into their own narrow viewpoints. Don't
shoot me for being the messenger. I only speak what I see. Because you

refuse to see it, or try to rationalize it any number of ways, does not mean that it isn't there. If it walks like a duck, swims like a duck, and quacks like a duck, it certainly ain't no chicken...

Whether or not someone "throws in the towel" or not is their own choice. Personally, I'd rather see them leave the hobby in disgust rather than have to put up with their pompous, arrogant, superior egos, on the bands. That type of grandstanding does nothing good for the hobby. Get over it, move on, or move out. Simple as that.

>

> > as hams, as set forth by the FCC.
>
> Agreed but I don't need to throw in a towel, sell my gear or to like any
> one of them.

That's up to you. Stay if you want, but don't preach to the newcomers how much "better" you are simply because you mastered an obsolete telegraphy skill. It won't mean much to the guy designing digital audio compression algorithms.

>
> > Bottom line: your opinion is irrelevant. The law is the law.
>
> Oops. You don't get to decide what is irrelevant and, in this case, the
> regs are the regs.

The regs say that new hams need only pass 5 WPM to become licensed for the whole anchilada. Therefore by extension, whether or not you believe that they are "real" hams or not is irrelevant. It's not up to me to decide it. The FCC already has.

>
> > >

>
> Dave, I've passed all the written exams and a 20 wpm code exam.

Whoopie! That and buck will get you a cup of coffee and 2 hot dogs at the local mini-mart. It's a shame that all that testing and code skill haven't taught you to be more accepting of differing viewpoints.

> I've never settled for mediocre in anything I've wanted to do in this life
> and I've never asked for anyone to make something easier for me because
> I couldn't handle it.

And if everyone thought like you, we'd still be shoeing horses, lighting flares at intersections, when we cross, as well as doing a lot of obsolete things. At some point, the rules have to change to track with improvements in technology. At some point, we have to acknowlege that morse telegraphy is just as old and obsolete as horses and buggies. So at what point do we finally stop testing for it? Do we dogmatically continue to test for CW into the 24th century when people are Star Trekking around the galaxy? No one is demanding "easier access" to ham radio, just access that is more in line with the technology of TODAY. You can give me the toughest theory exam that is relevant and I'll study for and pass it, because that is what is required TODAY.

I am a man of principles. I just couldn't see the relavance of CW. I refused to allocate slots of my precious time, to learning a skill that was of NO use or value to me. I had a choice. I could either give in, and waste time learning it,for no reason other than to get over a "hurdle", or be satisfied with technician plus privileges. For 18 years I have been satisfied. I knew that this day would come eventually. Now it's here. All I can say is "it's about time!"

It's unfortunate that the FCC didn't revamp the theory tests. They are way too easy now. I passed all of the current the internet sample tests without even studying them first. But it seems that the FCC is mostly interested in making their administrative jobs easier.....

Hummm, I'll have to remember that. I have a 2500M, which is about the
same radio, with the same light/dimmer.
Those lights burn out pretty frequently I hear. I bought mine used , and
it was burned out when I bought mine.
I haven't bothered fixing it yet, But I did talk to a few people about
it. They recommend to always use the dimmer in the lowest position you
can get away with. The light will last much longer. If you run full
brightness, as likely they did with my radio, it will burn out pretty
fast. As I haven't bothered yet, I'm not sure, but I hear it's a pain to
change out. I have no noise with the burnt out light. The receiver is
very good in it. Good intermod rejection I've found. MK

Not likely unless MFJ makes one. The new Yaesu HTs (FT-50, VX-5R) use a
four connector plug, vs the dual plus in earlier radios.

I'm trying to repair my Iwatsu oscilloscope after
it was in storage for 6 years. Looks like the tube itself is bad.

The tube is a Toshiba 150btb31a and it looks like
Toshiba doesn't make it anymore.

Any one have a clue as to where can find :

1. a cross reference list on the web

2. a source of crt tubes?

thanks

Not a very big deal. Note that it is April 17, 1999. The April 17 vs.
April 16 (1999) may relate to this being a leap year -- and April 15,
1999 to April 15, 2000 would be 366 days. Seems OK to me.

> Also, it looks like people who take advantage of this upgrade path are

True. But the added $6.50 can be saved by waiting until after April 15,
2000 and taking the single new element with more questions. So there is
a choice.

I'm thinking his English is not perfect and he meant that the number ("mass") of 706 radios for sale used suggests that they are not very good. He may not understand that some are being sold to upgrade to a later model of the same radio.

I have a 706MKII and really like it on HF. The PL seems a little ratty on 2m FM, but I use it only on HF mobile, so it matters not to me.

Phil

I had a TS820s for about 12 years and had the same problem at times. What I found was their must be an 8pin(I think its an "8" pin) plug in the back pushed in to the socket on the back of the rig or an external VFO plug into that socket. If it is there but not pushed all the way in, the LED will not light.

Hope this helps!

Source record: 89402

For Sale:

AEA PK-64. This unit is made to plug into a Commodore 64
computer. If you have a C-64 setting around, this will get you
on RTTY, packet, CW, ASCII, etc. This one has the "HF Modem"
with the bar graph included in it. $ 50

AEA MBA text. This is a plug in cartridge that gives
RTTY capabilities, plus some other digital things to
either a VIC 20 or a Commodore 64. New with manual.
I have 2 for the VIC 20 and one for the C-64.
$25 each

I found some "patch panels" as used for RTTY, etc. These
are the standard 1/4 inch jacks, and are new. Each panel
is about 8 inches long. I have some with 20 positions
and some with 40. The 40 position have two 20 position,
one on top of the other. Never been soldered to, as
best I can tell. 20 position for $5; 40 position for $10.

Prices do not include shipping from Florida.

Thanks.

Hi,

Following some advice from the list, I've just purchased an FT706 and am very happy (I'll post my thoughts on why that over the Yaesu FT100 later).

Any way I've a questionon the power plug on the back. Of the six pins, two are connected to 12V, two to Gnd and two open. Why the four pins rather than two? If I want to run the rig in receive only can I use a different connection (smaller PSU).

Second, I'm using Scancat Gold to control the rig and although it works, it's not fine! I'm sure it's only a timing adjustment but not sure where to start so anybody else running this combination?

I own the T81-A and really like it. As far as the 1.2G bandplan use, I haven't found any in my area (Northern Kentucky/Cincinnati). The only con I can think of about the rig is the battery clips tend to be very fragile when taking the battery off or putting it on. Icom will replace the battery free of charge, but I have heard that Maha has made a battery that will work with it and does not have that issue. I haven't broken any yet, so I haven't had to replace them. 73's, Nathan KA3MTT

I think we are in agreement. In general, the Internet is easier. But not by much. How much harder is it to get a Tech license, buy a HT and talk to someone over a 2 meter repeater? IMO, not much harder than buying a computer, getting and setting up an ISP account, learning to use the email client and sending an email.

Don't fool yourself into thinking amateur radio is that much harder than the Internet for basic comms.

Not to start a war, here...I am *just* making the observation that the tests may change AND be a bit harder (laughable, I know) after the April 15 date.

Damian & Bill-

I asked the same question at the Vertex Standard booth in IWCE/Las Vegas last April. As I recall, two parts of the company each went a different way. In other words, there are two answers. Yaesu may be the answer for part, but I believe Vertex Standard continues to exist separately.

I see that the latest Amateur Electronics Supply catalog still lists products from Standard, but they will not be re-ordered when sold out. Also, they have a "Consumer Electronics" section at the end of the Yaesu section, with Vertex Family Radio products listed.

From this, I would presume that Vertex Standard will continue producing some kind of land mobile product, and Yaesu has taken over their consumer products line.

I have a Kenwood TS-670 Quad Bander, and it does about 10 watts. I would like more power for 6m, and was wondering if it would be feasible to upgrade the drivers / finals to get a little more power. I also have KLM and Icom all mode 2m rigs I would like to increase as well. Figured it might be a little cheaper to do the better transistors than buying amps for the rigs. Any information is appreciated.

Well, gee, Mr. Cracker, what's up with stupid names? I guess since this message is cross-posted to a CB forum and a general radio forum, that all sorts of handles would abound, stupid or otherwise, so I won't comment, Mr. Cracker.

IMHO, Loek d'Hont is a good respectable fellow that I have done business with in the rec.radio.swap forum before, and he is a good guy, trustworthy, and has the right to complaint if someone is using an image made by him without permission to advertise their equipment.

Have a nice day, Mr. Cracker, you good buddy.

Hi LLoyd,
I found out that an Outbacker antenna works real well on 40meters and the other bands as well.
the antenna is designed for the ICOM706II the purth+ is the one. I love mine, i started out with a Ham Stick but it brought in to much noise for my tast, The Outbacker Purth+ is on the pricey side
but works great on all bands that it is designed for!!!!!!!!!!!!!! KB6HRT

David:

Yes, what you say is quite true. During my regular stays in Argentina
over the years I would often listen to the SW bands. It was quite
stunning to tune through the CB channels and hear regularly spaced peaks
of noise and essentially noiseless spacings resulting from untold
thousands of CB'ers piled together and transmitting simultaneously.
Occassionally, "How 'bout it skip land, Texas trying." or some such
emanation could be heard making it's way out of the mess. Similarly,
the FM studio-transmitter link transmissions from WFLA on 25870 kHz were
heard daily from morning till night with exceedingly strong signals.
Surprizingly, the amateur 10 meter band at the same time was completely
devoid of activity besides the strong beepings of low power amateur CW
propagation beacons from the US---I guess amateur radio mythology
promotes the belief that the sunspot minimiums preclude communications
on 10 meters.

You apparently suffer from a lack of self-esteem.

If YOU are a courteous operator with wide, deep technical knowledge,
then YOU are a valuable radio amateur. One could match my description and
hold a General license or below, or even no amateur license at all if you
worked, say, in military or commercial communications.

But it seems that this isn't enough for you. You crave that piece of paper
which says "Advanced" or "Extra" on it, not because of what YOU are and
what YOU have accomplished, but rather because of the mark the LICENSE
PUTS ON YOU, because of the "specialness" it confers on you, because of
the "distinction" which you believe it will afford you.

If that's all you want, just have a fancy, official-looking embossed piece
of paper framed and put on the wall next to your $3000 general-coverage
receiver. Only a tiny handful of people will know the difference.....

> Any way I've a questionon the power plug on the back. Of the six pins, two
> are connected to 12V, two to Gnd and two open. Why the four pins rather
> than two?

The reason for the 2 positive and 2 negative connections is the current capacity of the socket pin connection. The rig draws 20 amps at a full 100 watts output, that would be 10 amps per pin connection. At higher currents per pin the small, but non-zero, resistance causes heating from I squared R losses. So if only one pin was used, for both positive and negative leads, the heat generated would be 4 times higher, and may even melt the plastic under 100 percent duty cycle use.

>If I want to run the rig in receive only can I use a different
> connection (smaller PSU).

I have used a cheap Radio Shack 2.5 amp power supply with the MKIIG for programming and general coverage receive operation just fine. If you try to run the rig QRP it draws 6 amps.

Mark,

Thanks for your suggestion. I took the radio to the workbench last
night and observed the output on a 30 MHz scope. Your suggestion is a
very reliable method of acheiving optimum gain without clipping.

Also, the output as I stated is around 25 watts - but I should have
stated that it indeed was PEAK output power on a peak-reading meter.

Purely speculative Gary, what I see is even easier exams this is so we can attract those highly qualified technical persons who could not go past Technician Class because of their inability to grasp the morse code.

We will call them Technician Extra's.

I fix em you break em.

Does that mean that us amateur extras, who passed a 20 WPM
test without a doctors excuse note, can start signing our callsigns
"stroke 20" as a designate kinda like the "interim KT, temporary AE"
that was so prevalent on two meters back in the early and mid 1980's

I have on more than one ocasion seen tv picture tubes go bad when a set that was in regular service was put away for several years. I don't know why this happens but tv tubes do seem to go bad in storage unless they have never been used.

> taking the battery off or putting it on.

Nathan & Andre-

I have the Icom T-8, which uses the same BP-200 battery. I had a total of three clips break. Each time the battery was replaced with no arguement from Amateur Electronic Supply.

I currently have two batteries that have each lasted much longer than any of the earlier ones, so it looks like the problem is fixed. AES says that Icom blamed the problem on the battery supplier using a bad batch of material for the initial production run, and most of the bad batteries have now worked their way out of the system.

My T-8 usually works well. However, there was a problem where the final amplifier would somehow get locked into transmit mode and run the battery down. After this happened, it would no longer transmit more than a milliwatt or two until sent back for warranty repair. So far this has happened twice, but not since I stopped using a certain external speaker microphone. Granted, the external mike may have been at fault, but I think the output stage should be able to endure the stress of a long-winded talker!

If you don't need the 1.2G band, I understand the VX-5R is a nice radio. Just don't expect it to be able to scan channels that have CTCSS Tone Squelch turned on.

All of the information (with photos) is here:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=232885413

Here is a quick intro:

Yaesu FT-51RH 5w Dual Band HT w/ accessories

Dual Band (2m/440) FM Paging Transceiver. Excellent condition. Just a tad over a year old. Always kept in the leather (simulated?) case and rarely used outside. Excellent, like new, condition!

If you are bidding on this radio you know Yaesu quality. I can tell you that this is an excellent performer and I am only selling it because I have one too many radios and this one picked the shortest straw.

Lots of features, excellent radio, very clean. All of the features you would expect in a high end radio.

Also including the following accessories:

FNB-38 NiCd battery (5 watts) 9.6v 600mah
FBA-14 Battery Case for Alkalines
E-DC-12 Auto Adapter/Charger w/ Noise Filter
CA-9 Base Charging Stand
NC-65B NiCd Battery Charger (for use with CA-9)
Dual Band Rubber Duck antenna
(Simulated?) Leather case
Original Manual

i couldn't agree with you more, and think i just might sell out, they are
just giving the bands away, but one thing, at least they are keeping some
code, that will still keep some of the cbers out, but 75 meters allready
sounds like 11 meters anyway. i got my extra back in 1989, and passed all
the code requirements, and i am blind on top of all that.

I'd think it would be more likely that the tube socket pins would corrode,
making it look like the CRT was bad. Try taking the socket on and off a few
times.

I have seen a lot of crt's get weak over the years by setting around for a long time. Especially as the units get older. Have had lots of customers over the years put a set in storage and then find out later that the picture was very weak. Sometimes they will gain emission by just letting them run for long periods of time, but most the time they wont. I think when a tube starts to get weak, and the set is in constant use, it keeps its emission up. But when that set is not used for a long time, it runs down like a battery. Don't know the exact reason for it, but it use to be a pretty common event with older sets. Just like when we use to restore a tubes emission when it got weak, with a crt restorer, the tube would usually come out of it with good emission, but the tube would grow weaker and weaker over a period of time, until finally, it was unusable. Had an old Eico scope that set around for years not being used, and when I went to sell it a while back, the tube was very weak. It happens.

Does anyone have a source / part number for the power connector plug for the FT8100R? I used the one that came with it in my vehicle and I want to put a plug on the power supply for in home use. I want to avoid having to order the whole doubly fused line from Yaesu. I checked Rat Shack and couldn't find one.

Bill - n2asa

i feel that way sometimes watching the posts here in usenet. not just
in the ham groups.

anyone can go down to wally world and buy a computer and get on the
internet, but i don't ask them if they have any computer knowlege of
worth before i 'converse' with them.

interesting analogy. most of the people out here in the net are
appliance operators but noone 'blackballs' them.

people will visit websites that were 'generated' by an expensive program
just as much as a website built with notepad. the content is what
counts.

weird.

Source record: 89462

It has filament voltage on the pins but doesn't get warm even after an hour
or two. I get no trace and no spot. HV seems to be ok. If I turn the
internal intensity control all the way up I get "blush" on the tube that
does move with the vertical and horizontal position controls.

I did notice that the fil voltage reads
about 14 v ac on my dvm when it is supposed to be 6.3v ac. It comes from a
separate secondary winding on the HV stepup transformer. I do get
a fairly low ohms reading on the two filament pins when the tube connector
is off.

I'm going to borrow a scope from work and see what the sweep signals, etc.
look like, but at the moment it sure does look like it is the tube.

So, I'm trying to locate one or a sub since I suspect this will be a real
"adventure".

Correct in part

However, the problem doesn't reside with enforcement. Even though more proactive enforcement, at this time, sounds good. And it may well be - as long as it doesn't get in the way of legitimate operations.

The fault falls squarely on those that refuse to obey the rules.

It's like trying to blame the sprinkler system for burning the house down. The renter shouldn't have tried to barbecue his chops using the kitchen table as a grill. He's the one that started the fire - not the sprinklers. (To stay with the ham analogy, if someone hadn't turned off the sprinkler system it may have been possible to save more property and lives before the house became an ash pit)

You want to blame someone? Blame those that abuse the privilege of operating in the amateur bands, as if it where a right.

For once I agree with pretty much everything Jeff had to say. Maybe most people don't care about, or even know about, our hobby. But I do, and we do. We all have our feelings about the restructuring. Me, I love the Morse Code, but hated the Morse Code licensing requirement. Others felt that a stiff Morse requirement was important (I did at one time, so I understand this feeling very well). Hopefully we can agree to differ, and agree to unite to advance a much higher goal: promote, preserve, and advance amateur radio, my lifelong hobby. RJB

Date: 2000-01-07 00:00:00 UTC
From: Andre Beaulieu <boldinf@cam.org>
Message-ID: <856e0l$bte@tandem.CAM.ORG>
Source record: 89469

Hi,

Excuse my "tough" (dah!) question but what do you mean by that ?
ref: "Just don't expect.....". It was to my belief that the T81A and VX-5R add the same options concerning the CTCSS (encode, decode, tone scan) except that the T81A didn't have the DCS.

If I'm way out of field, excuse me but I'm learning right now (i.e. newcomer to this hobby)

Thanks

Andre

David,

You're quite right. We have the rule that we cannot tell a customer where to go to get a part or someting they need. We must make at least 3 suggestions, and preferibly sell they something from our store. More and more I find myself telling people that they can go to our competition and get the same thing for less, but the problem is the competition will not help the customers with their questions and concerns. The way I look at it is that if we don't have what a person is looking for, it is my job to help them find what the need, and give them the best advice I can. I know this means my services at the Shack will not ascend to that of the management, but I figure while I'm there, I can do the best for my customers.

941. VX-5R TX problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-07 00:00:00 UTC
From: Tim Landers <timl@mindspring.com>
Message-ID: <3876C1FA.3E1C82D6@mindspring.com>
Source record: 89471

My VX-5 has developed a strange TX problem only on 440 band, only on highest power setting. When problem occurs, radio will TX for <1/2 sec. Symptoms:

- will TX fine with battery removed on cigarette cord in vehicle, as long as vehicle is running and internal meter indicates >12v in RX. Voltage on battery drops 1.1 volt or so in TX, same as on 2 meters.

- intermittent TX with stock antenna, worse with Comet SMA503. I have two of these antennas, seems about the same with both. Also tried with mag-mount dual band antenna, also intermittent.

- seems to work ok if I first TX on 2 meters, then go to 440 band - once 440 seems to TX ok, cycling power off/on causes problem to return

- when in TX on highest power, voltage on battery drops 1.1 volt or so, according to internal battery meter, same as on 2 meters, which works fine.

Anyone got suggestions as to what might be wrong?

Source record: 89473

I doubt it. My SP-20 has the filters you describe but they have very
gentle roll-offs and are unable to do much of anything in the way of
signal separation. It is a very good speaker, but extreme selectivity
and/or noise reduction is something that you need to provide much earlier
in the receiver. The SP-20 has no amplification involved, so it will do
nothing to increase a signal's volume.

From my point of view, it's a great decision. Morse telegraphy is
STONEAGE and it is time to suppress all CW exams around the planet
for hams.
Yet the administrations of UK and NORWAY have reduced too the exam to
5 WPM, announcing the future suppress of CW in ham exams...
This mode is OBSOLET, it was probably good for the TITANIC but will
be not for the 21th century.
Anyway, I have nothing against CW, if some people like this mode, may
be we could allocate them SHF bands ONLY to continue to play with, while
we could chat on HF. :-)

That will be the technicians' revenge !!

I love my FT 8100. Best dualband FM rig i've ever had. I use it in the
house
and not mobile. Very sensitive radio in the 110-460 range. Not great on
the 800 and up areas though.
Fast scan and smart search is a great feature too.

I'm not aware that you can remotely change frequecies in the
crossband repeater mode like other can, but i never checked into it.

Its a very good radio for a used price of $ 250.00 to 275.00-
(its what i paid)

It have very good recieve audio when used with a good
external speaker.

I have no real complaints about it. (unusual for me) hi hi.

I hope this helps you some what. E-mail me if you have more questions.

Tom

The FAQ at

http://www.arrl.org/news/restructuring/faq.html

directly addresses your question. A partial quote is below. Hard to
read due to formatting, but the info is there.

Phil

---

3. I hold an Advanced class license. Can I take the current Amateur
Extra class written
examination (Element 4B) right now, then apply for
an upgrade to Extra after April 15,
2000?

Yes. The FCC has told the League that current
Advanced licensees holding a CSCE for Element 4B
on April 15, 2000, may apply for an Amateur Extra
class upgrade. See question 2, above. The
advantage here is that the current Advanced licensee
will face a slightly shorter 40-question
examination under the current licensing regime to get
a CSCE for the current Element 4B. The new
Extra class Element 4 will contain 50 questions (and
is expected to contain many of the present
Advanced class question pool technical questions). To
be valid on April 15, 2000, your CSCE will
have to be dated on or after April 17, 1999. A CSCE
is only good for 365 days.

Why would he want to buy an SBE ? If he liked Don Stoner's radio gear, he would more likely be happier with the CPI stuff than an SBE. After all, the Stoner gear was made by CPI for him. Sean

I was listening to two guys chatting on 2m this morning on the way to work in Atlanta. They were complaining about the restructureing. One of them said he's "too good to have to share the band with someone who can only handle 5wpm". Excuse me? Too good to share the band? What kind of elitist crap is that? Its people like this that will eventually do in ham radio, not anyone else.

I think it's a great rig. Lot's of features, love the ability to change the UHF side to receive VHF so it's like having two 2 mtr rigs at once. However mine developed a problem shortly after I got it. The receiver sensitivity went way down into the mud. Yaesu fixed and it worked fine for a few months but it broke again two weeks ago with the same problem. Friend of mine here has one that he bought about the same time and he's not had any problems with his. I posted a question about it here and did get some replies that others had seen the same problem. But aside from that I've enjoyed the rig. Plan to keep it for a while, when it comes home.

John, the reason you fuse the negative lead is to prevent damage to
the radio should your car battery ground fail. If your radio is tied
straight to the negative post and the main car negative cable fails
you will (attempt) to start your car through your radio. When you hit
the starter several hundred amps are drawn through the 12 gauge wire
and the coax. It doesn't last very long!

Jeff,

As a past Radio Shack Manager, I can only agree with you,
and point out that experiece in electronics is viewed as a negative
by upper management. The reason for this attitude is multi faceted.
First, if you understand electronics, your sharing of your knowledge
customers is viewed as wasting time, and not being attentive to other
customers in the store while you are providing the "answers". Second,
by understanding the theory and operation of the produce, you are
qualified to form an opinion. Even if this opinion is exact and precise
in both theory and delivery, it introduces a possibility of liability.
Third,
advancement cannot be provided within the company in terms of increased
pay commensurate to knowledge with the availability of other potential
employees who can write tickets for minimum wage. In other words,
in all examples, your knowledge of electronics will actually work against
you.

If you look carefully at the most sucessful managers, or the ones who
have retained their position and location long enough to be identified by
the buyers in the community, you will see a person with good communication
skills, knowledgeable on Radio Shack Procedure and especially good at
writing with a sharp pencil. Seldom, if ever, does knowledge of electronics
enter the picture. Their knowledge of the product, under the best of
conditions,
is parallel to their ability to remember catalog descriptions. Their true
expertise
in electronics is the mastery of packing a unit off to repair.

It is hard to offer spealized service in a chain store operation under the
control
of a corporation that has varying fields of interest. In the case of the
Amateur
Radio Chain stores, locations are few, and specialization in Ham Electronics
is the only form of producing revenue. The hand that feeds.....

For the most part, I have to agree with others when they mimic the popular
ad....

"You got Questions, We got Shrugs.."

I wish the best for your career with Radio Shack. You can go far with them.
Just
never let your knowledge of the mechanics of the product get in the way of
your
presentation of the product.

Actually this FAQ now brings up an additional question. Both items #2
and #3 state that in order for a CSCE to be valid on April 15th, it must

be dated on or after April 17th! Government logic? Geesh...

Also, it looks like people who take advantage of this upgrade path are going to pay $13.30. Once to take the exam and a second time to file an application.

:-) , Well let us consider some principles of PHYSICS, the MASS refers
to INERTIA, i.e it designs the amount of matter contained in an object.
The usual unit for mass is the kilogram (in the MKSA system). About
the ICOM 706 MK II, we can probably speak of TONS :-) that are regularly
offered to selling in the ad(vertisement)s by hams, just few months
after they bought this TRX . Conclude yourself ...

Excuse me, I have two MKII radios and they work great. The only
other radio that does what you want is the Yeasu FT100. This is the
first generation of this radio. Icom at least has a 3rd generation
out.

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

I am asking $1500 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable 15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

985. The END of Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-07 00:00:00 UTC
From: njvets <njvets@skyweb.net>

Yes indeed, its all in the best interest of Ham Radio..sure it is! Look guys, it has nothing to do with the CW requirement. I am 110% in favor of the CW requirement, but the truth is Ham Radio began its demise when the FCC stopped conducting exams. We all know that the VE system is of questionable integrity. You can read about bogus testing sessions every month in QST and other Ham rags. And those are only the ones that got caught! Just think, now any half brain dead idiot can go into a VE session, conducted by his buddies, take a 35 question exam, which he already knows the answers to, and come out an Extra! And this is GOOD for Ham Radio! Somebody explain that to me. Or should I say "rationalize" that to me. I may not be the nicest or smartest Ham in the world, but I'm sure not stupid either. This is definetly The End of Ham Radio. Do you really want to be associated with persons holding Extra tickets who do not know the difference between a 9 volt battery and an oak tree?
I don't.
I guess I must be confused, but I always thought if I EARNED something, it would have value to me and I would respect and take care of it. How much value can you place in an amateur radio license that is easier to get than a parking ticket?
Good bye Ham Radio, it was nice knowing you.

> programming language. It can be used via the Internet or not, just like
> many other programming languages. You're far more likely to encounter
> Perl on the Internet than Java.

As far as my comment about the internet being too easy, I was refering to it in the context of a communications medium, It does not take a java whiz, or other programming skills to load some copy of voice chat software into a mickey-soft computer and be able to "reach out and touch someone".

Like ham radio, the computer hobby has people that are users, and there are the "geeks" that know the intricate details of TCP/IP, ATM, and various other networking schemes.

But as far as from a purely communications standpoint, communicating world-wide on the internet is as easy as pointing and clicking. There is virtually NO challenge to it. Ham radio, on the other hand, has many variables that make the pursuit of DX, challenging. And THAT is where the enjoyment comes for the majority of radio ops. If you can't grasp that concept, then you're probably better off on the internet.

Dave

> Supreme Court review and rulings.

Zoning laws are superceded by federal law in most cases. Zoning restructions can be challenged and overturned if one has the desire (and money). CC&R's are considered "voluntary" contracts. Still, with the availability of "ham friendly" neighborhood, slowly declining, while the population of hams will be increasing, there may be some legal challenges to CC&R's as well. Stay tuned.

> propagated world wide on the HF bands at the eleven year sunspot maxima
> make citizens and governing bodies of the US appear as chumps and cause
> a loss of face in the global community.

The US is already viewed as "chumps" by a great percentage of foreign counties. As to your assumption that "CBers" will be on HF, that has not be substantiated, and is only a paranoid supposition.

> 3. With the expected increase of operators will the FCC impose a reduce
> power limit so as to maintain appropriate RF field intensities in areas
> of human habitation---for the children.

We already have power, and RF field guidelines which every ham should be aware of. It is up to each individual ham to construct his antenna system to concentrate the major RF power away from habitable space. Hams should, as a rule, use the minimum power necessary in any case.

> 4. Statistically speaking, will the increase of illegal activites that
> will accompany the increased population of amateurs be managable by the
> FCC---if they can't afford (funding, manpower) to manages the mess that
> they created what then.

They can't seem to "manage" what we have now. More hams will only make the job tougher. Ham radio is only a mirror of society itself. When we live in a society that encourages parents to not correct their children, lest it damage their "self esteem", it's no wonder we have so many

people that are quick to ignore rules and regulations.

> 5. What restrictions in advanced design of amateur equipment will be
> imposed now that manufacturers have been stimulated to produce by the
> creation of larger market demand.

That's a strange question. Actually, I would be curious as to what new technologies and innovations can we expect to see now that the market is potentially growing. What new bandwidth saving techniques will be employed? What about digital audio?

I see nothing that would demand a "restriction" on designs. If anything, I see the opposite.

> 6. Will amateur radio disappear into the 'noise' by a future FCC Report
> and Order that all amateur activities cease and desist and resort to
> channelized control of spread-spectrum modulation techniques to hide and
> get rid of the dirty little mess. Pass codes will be issued instead of
> callsigns to activate strictly regulated (FCC) communicators
> (ex-tranceivers).

That's a sort of Orwellian viewpoint. I think that ham radio should already be experimenting with SS techniques. There are alot of advantages to it. But forcing Hams "under a SS carpet" to hide the dirt, seem a bit farfetched. At least for now.

> 7. Will all amateur HF allocations be eliminated and relocated to
> spectrum translators aboard amateur satellites operating at milimeter
> wavelengts.

For what reason? That would also incure additional cost. People want cheap. HF is cheap.

>
> 8. Will amateur equipment contain embedded identifiers and GPS locators
> to control errant amateurs---computer databasing and issuance by
> violation notices by FCC or ARRL Official Observer staff (by FCC
> approval) at the mere push of a button by decoding an encrypted data
> burst piggy-backed with amateur transmissions.

Any analog scheme of auto identification can be thwarted by technically competant people. Once you are in a digital domain, it would get tougher. But I would hate to think that a digital encrypted ID scheme would have to be developed to deal with out-of-control hams. At that point I'd be out of the hobby.

>
> 9. Will we tire of 'smokey' reports from one end of the continent to
> another.

Only if you keep your rig on 27.185 Mhz.

> 10. To ease congestion, will amateur VFO's (slyda's or sliders) be
> eventually outlawed and be replaced by channel selectors.

They already are on most VHF radios. They may call them "VFO's", but they are just 5 Khz resolution PLL synthesizers. As to easing congestion. An HF SSB signal only needs about 2 Khz of bandwidth. Any channel selector that has less resolution than 2 Khz, would increase congestion, since it would force all of these signals into "clumped" channels, instead of allowing them to spread out.

> 11. Will older amateur equipment at some future date be outlawed as the
> transition to controlled radio communications is established.

That's a sure bet, assuming that your Orwellian scenario plays out.

> 12. After April, 2000 will we find that an obtaining and possessing an
> amateur license from some third world country (like Somalia) where
> testing is more rigorous convey greater prestige to it's holder than to
> be licensed in the US.

What country (especially a 3rd world one) has testing standards that are MORE difficult? We, the US, are actually LAGGING many other countries in reducing testing requirements, especially regarding morse code. It's funny that even 3rd world countries recognize that morse is an outdated skill, that is no longer relevant.

I havn't missed the point. You have avoided the truth. You wimp out when you take the "it takes a village" road Gwendolyn. In the real HAM radio world it is called Elmering.
E L M E R I N G Gwendolyn. Make a note of this and if you ever make it up here where we are, you will hear it everyday, not just on a frequency (ARRL), but all over the bands, day in and day out. If we can't teach you on frequency, we meet at a club or meet at a house or meet at your house to cure a problem or just to Elmer. This is not the primary business of Hamming, mind you. It is a sideline benefit from the guys that have been there, done that, here's how! Todays, 'gimme, gimme, I want it now for free with no effort,' doesn't cut it with the "been there, done that" crowd.

I am blessed with two grandaughters, eight and five years old. They can do 5 and 7 wpm now. My oldest is not ready for the written for a little while and of course the 5 year old reads code very well but her sending is unintelligable. Before teaching these two, I taught my son to his general ticket (10 yrs) and he took it from there. I've been there and done that Gwendolyn. I continue to do that Gwendolyn, however I won't help anyone that won't put in the effort to study or practice. I just don't assist the "gimme, gimme, feelgood, welfare" cases. I leave them for the for the government village.

999. Re: QUITTING HAM RADIO - gear for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-08 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38778D0D.CF09CEE@yahoo.com>
Source record: 89253

What is your call sign and license class? If you're not a 20 WPM
extra, then you have never experienced the full aspect of being
able to roam the HF spectrum free of license class barriers and I
dont think your comment is credible.

Those of us that are 20 WPM extras have just had our licenses
"devalued". I worked hard to get 25 Khz of spectrum on a few bands that
are free from CB-types, full of good DX (who also congregate there to
get away from the many USA lid operators and interference) and contained
technically and mentally competent operators. Now, my 25 Khz of
band...which we own as extra class hams...will be inundated by the same
crowd that ruined the 2M band.

This, to me, is a problem. And, despite what the FCC and ARRL say, we,
the Amateur Extra Class community (the 1 percent-ers of the ham bands)
have lost most if not all of our "priveleges" by opening up our band
segment to a
far wider populous.

Further, to gain an extra class ticket, I believe there are at least
140 questions to pass technically. Under the new proposal, not only is
the code requirement (which DOES screen out lots of morons) going down,
but so too is the
multiple guess requirement.

As an ARRL VE, I am convinced the VEC will do little if anything to
change
the current question pools or "toughen up" the examinations. These are
not-for-profit groups and they dont have the time, money, or resources
to
do a major question pool re-vamp. For one, not much has changed to
justify a change from a technical standpoint. They may add a few
questions here and
there, cut a few, but by and large, the questions will be the same, the
question pools will be published, and the written exams will be as
simple
as they are to pass today.

We will be left with a bunch of loser operators, who believe ham radio
is
their "right" not their "privelege", who may have never been on HF
before
and will pick up the "CB-type" operating habits, and will degrade ham
radio to a useless free-for-all. Just look at what happened to the
10M band from 1987 to today. Totally different "lingo" up there.
People

talk of "first personals" instead of names, they are "QRT and on the
side",
the use the word "break" or "station" to get into a conversation, they
use
over-driven CB type radio's, speak that CB-Bubba english, and have no
courtesy for other operators if a DX station does happen to venture
below
28.500!

From what I've heard you are correct about being 180° from their view point about Incentive Licensing. From what I've been told that's one of the things that almost killed Ham radio in this country. I can't speak on it personally since that all happened before I got my license. But just because someone makes a mistake doesn't mean they can't change their mind and start support something that is a good idea.

Derogatory comments? Just pointing out a few part 97 rules that seem to get over looked while some try point out how CW makes us much better Hams. The list of equipment I saw posted doesn't look like he would be someone who spends much time advancing the art of radio. I could be very wrong about that but don't think so. No I don't feel we all need to have the latest and greatest equipment. I operate AM on occasion myself. But it doesn't take a rocket scientist to see if we don't get some people into the hobby who do try to advance the art of radio, or at least occupy the bands we've got now we'll loose those bands to services that will use them and advance the art of radio. Tried a digital cell phone lately? Mine sounds better than my old twisted pair analog one. And the Cell companies at "very"hungry for more and more frequencies. Meanwhile the majority of us are down on HF fighting about having to learn CW.

I don't understand why we don't accept the fact that the rules have changed and figure out how we can teach and Elmer any of the new comers. This would be the perfect opportunity for those who have been in the hobby to expose these new Hams to the different modes of operation and maybe learn a bit about the digital technology they might bring with them. But telling them to "kiss you ass" ain't going to help any one. If high speed CW is so important then hang around and prove it to these "upstarts" that will getting the 5 wpm Extra class tickets. At least your class is still going to be around. I've got an Advance ticket and like the old Rambler / AMC cars....they won't be making them any more.

Mark

You are mostly correct - but observe the latest commentary from the ARRL on the subject on their website, and notice how they are falling all over themselves inferring what a wonderful thing it will be - a 180 from their Incentive Licensing stance not that far back...

AND, it's a pretty far stretch to scrape up durogatory comments and assumptions based merely upon his equipment listing - desperation perhaps? *I* also have some old AM gear - a Gonset G-28 for ocassional use, and an old Central Electronics 20-A for nostalgia purposes - does that make me some sort of electronics misfit as well? Must we all own

and use the very LATEST technology to fit YOUR interpretation or our
reason for being - or are you merely reaching here?

No, it's just that lots of ham operators are socially inept. They
like ham radio because they can do little annoying things from behind
a microphone, anonymously, to annoy others. No different than
the internet. They need their noses tweaked once in a while.

You are an honorable person because you at least sign your name.
and we can reply with our flames to your email address.
It's not about repercussions. It's about being flogged in public and
there are lots who can dish it out but cant take it.
Kinda like Voting, John. Notice how the ones who bitch the
loudest are usually the ones in the tavern on election day?

They were graciuos enough to let you know they were slowly converting? All
the ex Motorola
customers I pick up say "the radios don't work no more..." Well, thats
because the repeaters
are unplugged and enroute to Pakistan, or some other hell hole.
Ask your buddy Riley sometime...How does Morgan do that and sleep? While
your at it,
ask Riley what he and Morgan were doing during the "laxed enforcement 80's"
he sheepishly
fesses up to in his addresses to amateur groups who don't know the real
story.
No E's on my SMR yet babe.

At least keep one receiver. It's going to a blast listening to the new gang on HF fighting for a frequency. Of course it will necessary to purchase a large amp in order to talk over everyone else. If that fails maybe some can make use of they're "MARS" mod'ed transceiver and just " Freeband ".

Most of those smaller rigs will do anything a big one will. Or at least as far as being able to hear and work someone. Any of those you mentioned would be fine. Myself, I refuse to buy a radio that costs the price of a decent used car. Mainly because it's just not needed .If you work cw, I would get a cw filter. That will make the little rigs about as good as the big ones in that regard. The 840 is pretty good. My personal preferance for that class of rig would probably be the TS-450. Pretty good radio for the price. Like a jr. 850 nearly.
Also many older used rigs can be quite usable. I still run a 82 model TS-830 quite often. And it will pretty much keep up with most of the high dollar rigs. I still run an old IC-730 in the car. You can find those pretty cheap, and are quite usable rigs. I've seen em for 300$. I can be using my 830, and tell em I'm on a TS950. They will never know the difference by listening to it. And I doubt you could hear anything on a 950, that I couldn't get on my 830. MK

Might I suggest you destroy your equipment by repeatedly dropping it on your foot? Another possiblity would be repeated collisions between your rig and your head.

Hello!

I have just uploaded a revised version of the Yaesu FT-102 relay substitution information (now called 'Tutorial' as it is more detailed :-)), with lots of close pictures and comments. Go to my WEB page index (address in the signature) and select the link to the FT-102.

Hope you enjoy it!

Regards and HAPPY NEW YEAR!

I'm surprised anyone even brought up the price of radio's today as opposed to what they were 25 years ago. Most of my HF geat is "Boatahcnors" (Hallicrafters, B&W etc). I was astonished at the prices thry were selling for new circa 1960!! Consider the average income of a middle class ham, and it was amazing they even sold ham radios back then!

Also, why do we NEED a radio that does everything but the dishes? IMHO, there's a very good market for a "plain jane" HF radio that does SSB, CW, 100W and that's it. Say, for $300-$400? Of course, the new ham thinks he/she "needs" the glitter radios that do everything but the dishes.

>That's right. We have LOST 90% of our bands, virtually all to businesses.

I do most of my operating HF, and haven't owned a 2 M radio since the early 1980's. Could it be there is just no interest in those bands? I'm not suggesting there is not, I'm asking because I don't know.

Source record: 89273

One owner, 3 kW roller inductor T network tuner.

2 coax inputs
1 balanced line or long wire input
Lighted cross needle metering shows Forward and Reverse Power
Built in dummy load
Includes original manual and box.

This puppy will tune most anything from 160M through 10M.
Electrically the unit is 10. There are some dings and the front panel
has been touched up a bit (conservatively a 7, but probably an 8).

Asking $225 plus shipping.

Regards,

George (KQ4QM)

KU4MP Advanced.
If you think you Extra's think your licenses just got "devalued" try to imagine having one that got eliminated! Don't forget I loose the chunks of spectrum that the Advance class had to share only with other Advance and Extra's also. I'm sure you had to work hard to get that small 25 KHz but guess what so did I to get what I have. In fact I was one of the "foolish" who studied and fought with the 13 wpm code test when the majority of the Hams I knew where getting there Extra class tickets courtesy of Dick Bash "study" guides. What do you want to bet their jumping up and down fussing more than the ones who really worked for it.
I never saw the point of an Extra ticket. The small addition of spectrum just wasn't worth having to fight the code again. I'm happy with what I've got an don't plan to upgrade when they drop the code.
As far as the CB like operating habits on 10 meters I wonder how much of that is to blame on the lack of Elmering? I sure have heard my share of Hams who past the code test bashing the No-code Techs, even to the point of ending a QSO when they found out a person has a No-code ticket.
Also as I've said before, I'm sorry there are Extra's who are so upset over this. But the FCC has changed the rules and as the Eagles said in one of there songs.....Get over it!
Also I'm sorry I let myself get started in this since this news group is supposed to be about equipment. This will be my last non-equipment post.
Mark

Joe K7JOE <K7JOE@yahoo.com> wrote in message
news:38778D0D.CF09CEE@yahoo.com...

What is your call sign and license class? If you're not a 20 WPM extra, then you have never experienced the full aspect of being able to roam the HF spectrum free of license class barriers and I dont think your comment is credible.

Those of us that are 20 WPM extras have just had our licenses "devalued". I worked hard to get 25 Khz of spectrum on a few bands that are free from CB-types, full of good DX (who also congregate there to get away from the many USA lid operators and interference) and contained technically and mentally competent operators. Now, my 25 Khz of band...which we own as extra class hams...will be inundated by the same crowd that ruined the 2M band.

This, to me, is a problem. And, despite what the FCC and ARRL say, we, the Amateur Extra Class community (the 1 percent-ers of the ham bands) have lost most if not all of our "priveleges" by opening up our band segment to a
far wider populous.

Further, to gain an extra class ticket, I believe there are at least
140 questions to pass technically. Under the new proposal, not only is
the code requirement (which DOES screen out lots of morons) going down,
but so too is the
multiple guess requirement.

As an ARRL VE, I am convinced the VEC will do little if anything to
change
the current question pools or "toughen up" the examinations. These are
not-for-profit groups and they dont have the time, money, or resources
to
do a major question pool re-vamp. For one, not much has changed to
justify a change from a technical standpoint. They may add a few
questions here and
there, cut a few, but by and large, the questions will be the same, the
question pools will be published, and the written exams will be as
simple
as they are to pass today.

We will be left with a bunch of loser operators, who believe ham radio
is
their "right" not their "privelege", who may have never been on HF
before
and will pick up the "CB-type" operating habits, and will degrade ham
radio to a useless free-for-all. Just look at what happened to the
10M band from 1987 to today. Totally different "lingo" up there.
People
talk of "first personals" instead of names, they are "QRT and on the
side",
the use the word "break" or "station" to get into a conversation, they
use
over-driven CB type radio's, speak that CB-Bubba english, and have no
courtesy for other operators if a DX station does happen to venture
below
28.500!

Source record: 89279

I use the 9130 here at home as a base (but just recently am evaluating a Yaesu FT221 as primary base), for local and contesting. I dont use it much on FM.

SSB and CW are fine. I'd prefer HI/LO power option for SSB (it has only HI for SSB). FM and CW are HI/LO selectable.

LO Power out is roughly 4-5W across the band, and HI is roughly 15-20W across the band. IF you hv the manual, you can tweek the innards for a lower output power for the LO selection.

There is no break-out option for manual T/R switching. I cut into the T/R line for that, as I switch preamps and a 4CX250 amp for contesting.

The RX RIT is a nice feature. There is no TX variable adjustment (as on the FT221). On some 10kHz freq increments below 144.200, the PLL will "hop" a bit, a hundred Hz or so. Unless you work square on a 10kHz increment, it shouldn't be an issue. THis may me on only my rig. Others may not see this problem.

The innards are wired for continuously charging a 7.2V nicad pack (for memory back-up). I recommend you remove the battery pack. The previous owner of my 9130 had used a conventional 9V alkaline battery, instead of the rechargeable NiCAD. THe 9V had burst, and the innards were covered with corrosion. A toothbrush and alcohol removed nearly all of the crud.

I purchased mine in 1990 for $425. Going rate now is about $325, in working shape. Some folks will pay more... as usual.

For most modules, the power output goes way down, to about 1/4 to zero output, as freq goes up. There is usually more room on the low freq side.

Has nothing to do with output networks. THe interstage networks inside the module are designed for a certain output for a certain freq range.

You might be able to have it work up to about 150mHz, tho.

I recently aquired an old yeasu memorizer 2 meter radio. Due to my ignorance, I blew the audio circuit and need the manual / schematic to attempt to repair it. Anyboby have one? I also have a friend and fellow amateur who needs the manual for a Heathkit HW-101.

Bought new about 6 months ago. Clear sounding, easily operated radio with great features. Not many hours used (the reason for selling). Selling the radio with the case, as well as MH-C777 rapid-charger/conditioner. This will deplete/charge the battery in record time(as opposed to factory supplied charger). Please email for more information. 73's

1036. FS: AOR AR-7030 + (Plus)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-08 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <858sfs$352$1@thoth.cts.com>
Source record: 89290

I have for sale: AOR AR 7030 Plus (upgraded to a plus by AOR UK). Works great. Includes the following filters 2.1, 2.9, 4.1, 5.5, 6.5 and 9.5 kHz. This receiver has ALL the Kiwa Electronics modifications... The 2.9 and 4.1 filters are Kiwa Premium Filter Modules. In addition to being a PLUS + model, it also includes the NB and NOTCH option, built-in speaker. The only flaw with this radio is a blemish on the top cover of the radio. Looks as if the previous owner installed a piece of velcro--it peeled off and left a small amount of adhesive that I have not been able to remove. Includes original box, manual, remote control, power adapter. Priced at $950 shipped/insured CONUS.

Thanks.

As a matter of fact there were as many comments both ways prior to the No Code Tech.

Why, if I've shown both the proficiency you have and am proficient in CW would you feel I should not operate in the same mode you do? Was that spoken as "a true ham?"

Well, if 27Mhz is included in the "HF" spectrum, as it was at one time, then roaming "free of license class barriers" is readily available!

>
> Those of us that are 20 WPM extras have just had our licenses
> "devalued". I worked hard to get 25 Khz of spectrum on a few bands that
> are free from CB-types,

I dare ask, please define a "CB-type." Would this be different from those who populate the ham bands so well known for their questionable (at best) operating practices?

> Now, my 25 Khz of
> band...which we own as extra class hams...

Er, no you DON'T own that 25Khz of band, the US Govt. owns that, and all, ham bands.

>
> This, to me, is a problem. And, despite what the FCC and ARRL say, we,
> the Amateur Extra Class community (the 1 percent-ers of the ham bands)
> have lost most if not all of our "priveleges" by opening up our band
> segment to a far wider populous.

Somehow, this seems more a "personal predjudice" than it does a lament about the condition, or lack thereof, of the ham bands. You wouldn't be confusing the two, would you?

>
> Further, to gain an extra class ticket, I believe there are at least
> 140 questions to pass technically. Under the new proposal, not only is
> the code requirement (which DOES screen out lots of morons) going down,
> but so too is the multiple guess requirement.

Well, at least you are honest about the true intention of CW--that its purpose is to pose as a technical merit to the hobby, when it is actually used to "screen" human beings...you know, those "CB-types"

>
> As an ARRL VE, I am convinced the VEC will do little if anything to
> change the current question pools or "toughen up" the examinations.

I hope you are wrong about this. Multiple choice needs to be thrown
out, question pools need to be thrown out, and examination procedures
need to be toughened up!

>
> We will be left with a bunch of loser operators, who believe ham radio
> is their "right" not their "privelege", who may have never been on HF
> before and will pick up the "CB-type" operating habits, and will degrade ham
> radio to a useless free-for-all.
>

First, it was you who said above that you "owned" some band portion, and
I think you may be confused about the difference between right and
priviledge. Secondly, with all due respect, I am not a loser operator
and take issue with your generalization!

> Just look at what happened to the 10M band from 1987 to today. Totally
> different "lingo" up there. People talk of "first personals" instead of
> names, they are "QRT and on the side", the use the word "break" or "station"
> to get into a conversation, they use over-driven CB type radio's, speak that
> CB-Bubba english,

While not your "lingo" (fine business, FB, YL, OM, POE...blah, blah,
blah) it sounds like 10M is very orderly and those "CBers" are treating
each other with respect. And, I dare ask again--what is "CB-Bubba
english"?

> and have no courtesy for other operators if a DX station does happen to > venture below
28.500!

HAPPEN to venture below 28.500????? You haven't been listening lately
have you? I just bought the Radio Shack 10M mobile rig and had a blast
during a recent contest with stations from all over the world...er,
below 28.500. They are not "just happening" to "venture" below
28.500--they are GOING there and they are having a blast with us lowly,
lowly, lowly 28.3-28.5ers.

Sorry, nothing you've said in your complaints above hold water. It
sounds to me like you are misunderstanding your own personal predjudices
as zealous protection for the "hobby." With that in mind, sounds like
the "hobby" will be much more the better without you in it. Thank you
for recognizing that.

'Tis a shame. One sees all that equipment as something to be ashamed of. I see that it represents a heck of a lot of years, probably advancing the "state of the art" so it can be handed to the challenged. If what I've seen VHF-FM and much of HF phone evolve into I'll be content to stay on CW.

Mark, I am one who was around during Incentive Licensing. It served little purpose but certainly impacted the licensees. I lost privileges so I'd have the incentive to upgrade. I continued operating high speed CW for years in the General subband while the extra sub-bands lay somewhat dormant.

Though I disagree with the gentleman selling his gear and the, "kiss my ass," attitude I do recognize he may have advanced the art in one way or the other for 50 years or more, as his call and gear indicate.

The sad part is that we Americans are too quick to substitute quantity for quality. I hope we don't see the hobby go the same way.

Consider the MFJ 418 Pocket Morse Code Tutor. This thing is great. It will greatly accelerate your learning. One of my sons at age 11 used it for two days to pass 5 WPM. My other son used it to pass his 13 WPM and is using it now for the 20 WPM test. I used it to help me pass the 13 and 20 WPM. It is small and can be used in your car, or with earphones anywhere. Good luck.

Being that the restructuring R & O leaves existing
amateurs unaffected, advanced class licensees can apply
for vanity calls exactly like they have since the system
went into effect in 1996. No NEW advanced class licenses
will be issued after April 15th, but those who already
hold advanced class licenses can apply for vanity calls
under existing guidelines.

This may sound silly, but are the leads directly attached to the pins, or
are they soldered(not likely, but if so, try reheating the heater pins).
A lousy solder joint on a heater pin could very well cause the type of
difficulties you are having.
Also consider if the neck board or socket might have a bad soldered
connection, or a oxidized contact.

Remember, your meter readings of the heater voltage are based on the loading of the meter...a high resistance connection may seem ok, but fail under the loading of the heater(remember, the voltage drop becomes more of an issue as the current goes up).

I notice alot of under $1,000 options in the HF rig market from Icom, Yeasu, and Kenwood - even Ten-Tec. Aside from the obvious omission of certain features such as additional CW filtres, DSP, and FM, how else do these "starter" rigs fall short of the mark compared with their $1500 - $2000 counterparts? One day I'd like to get back into HF albeit with a limited cash outlay, and hopefully not with a used HF rig next time. So I'm carefully reviewing rigs like the Yaesu FT-840, Icom 707, etc, and always interested in hearing what others have to say about them.

Hi John,

I used an FT-840 for about 6 months and found it to be an excellent rig. I later went to an Icom IC-746 and could not tell a great deal of difference in performance between the two. It's most features you're buying, albeit nice ones. I can definitely recommend the FT-840.

73,

Marv

I've got a Alinco DX70 that I use mobile however it would make a great starter rig for a home station. It doesn't have "all" the bells and whistles but there are lots of good features on this rig for the price.

I notice alot of under $1,000 options in the HF rig market from Icom, Yeasu, and Kenwood - even Ten-Tec. Aside from the obvious omission of certain features such as additional CW filtres, DSP, and FM, how else do these "starter" rigs fall short of the mark compared with their $1500 - $2000 counterparts? One day I'd like to get back into HF albeit with a limited cash outlay, and hopefully not with a used HF rig next time. So I'm carefully reviewing rigs like the Yaesu FT-840, Icom 707, etc, and always interested in hearing what others have to say about them.

If you could possibly swing it, I'd go for the TS-570DG if you can find one (was $1149.00 at Texas Towers). Otherwise, if you really want to go on the cheap, go for the FT-840. Although I'm a dyed in the wool Icom man, I'll have to vote against the 707. I just don't like rigs with the speaker grill on the front panel. Makes it look kinda cheesy and too much like a CB....YUCK!!! (same thing goes for the Alinco DX-77T)

I have a good friend who runs one with a Shure 526T preamplified desk mike, and he sound great. He absolutely swears by that rig and says that he's gonna be buried with it when he passes (jokingly of course). I've never used one, but I really like it's styling and most of the reviews I've read about it are positive. Hope this helps.

1061. Re: QUITTING HAM RADIO - gear for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-08 00:00:00 UTC
From: Mark <BinfordV@att.net>
Message-ID: <857bgd$2dl$1@bgtnsc01.worldnet.att.net>
Source record: 89359

Quote from Ray's web site: "ALL THE FOLLOWING GEAR WILL NOW BE DISPOSED OF.
I want no part of ARRL's latest "product." I will not be meshed into 5 WPM
"Extras," let alone a bunch of CBers. " {5 WPM "EXTRAS?"
KISS MY ASS! "

Maybe I'm wrong but I remember reading that the FCC came up with this
restructuring first and rejected the ARRL's proposal? In case you haven't
noticed the rest of the world has been moving away from CW requirements.
Just take a look at other countries Ham license requirements. Maybe the FCC
has been watching the rest of the world!
Ray I noticed from your web site you were running an AM station....hummm
don't most CB'ers run AM?
Also since you refer to no 5 wpm extra's one would assume that you operate
CW also. Let's look at the FCC rules that cover Ham Radio. Part 97.1.B "
Continuation and extension of the Amateur's proven ability to contribute to
the "advancement" of the radio art".
So here's the list he has for sale on his web site:

FOR SALE:
Collins 30L-1 amp, $500.00
Collins 312B-4, $175.00
Cushcraft A3S w/ 30M kit, $275.00
US Tower TMM-541SS, $1400.00
HAM IV rotor, $200.00
Johnson Ranger, $200.00
Hammarlund HQ-100A w/speaker, $200.00
Heath Monitor Scope $100.00
2M Ringo Ranger II - $40.00
440MHz Ringo Ranger, $30.00
Arrow dual band 'J' antenna 144/440Mhz
new, never used, $35.00

Humm lot's of "advanced" equipment here! Hello! It's seems your promoting CW
and AM, two modes that the rest of the world seems to have moved away from.
For that matter my cordless phone is promoting more advanced technology then
that, 900 MHz, digital, spread spectrum. I guess part 97.1.b didn't apply
to you since your a "real" Ham!

While we're on the subject of part 97 let's look at 97.1.E " Continuation
and extension of the Amateur's unique ability to "enhance" international
goodwill". What was it you said..... " {5 WPM "EXTRAS?" KISS MY ASS! "! I
can see where that kind of attitude would promote goodwill...NOT!

Ray I'm sorry you feel that the changes in the FCC rules is going to spoil
Ham radio for you. I welcome the newcomers had hope I can Elmer a few, but
if your bent on promoting "give me CW/AM or die" then don't let the door hit

you in the back side when you leave!
Mark

Not without serious mods, of course. The superregen receiver directly connected
to the antenna is the culprit.

>Thirty+ years ago I was running high power AM on two meters. The owner of

How far was it from your QTH to his?

Your point is valid, of course. However, those Lunchboxes are a goldmine of
parts for the homebrewer and restorer of hollowstate gear. The power and audio
transformers alone are irreplaceable.

Heck, I'd buy them for the parts, but I must also deal with a Higher Power....

I have two dual band handhelds for sale.

1 - Icom IC-Q7A with Extended TX mod done. Excellent scanner also, receives from 30 MHz to 1300MHz (less cell) and tx on 130-174 and 400-460 or so. With original box, manual and antenna. Great radio works for days on 2 AA batteries, $175 shipped

1 Heath (private labled Standard C558) HW24T, dual band HH with two antennas, cell and extended RX mod done, dual VFO's, manual, original box, charger and 7.2V batt. Sell for $225 shipped

ALSO; EF johnson VHF handi talkie, w/o antenna connector. Unit will work fine when charged and antenna connector added. With 9.6V 1Ah battery Sell $150

Photos upon request

Does anyone have a source / part number for the power connector plug for the FT8100R? This is a ham dual band mobile, but the power connector (a T type quick disconnect) is used by almost all the major brands for the VHF/UHF rigs.

It is possible to purchase additional power cables, for a large nominal fee, but would like to find a source for the connector only so that I would custom make what I need.

TNX in advance for the response.

Yeah... I have had the same problem with mine... I bought it from RT Systems at a ham vention and I have had to send it to them three times. I broke within a day each time.. The back of the radio also got very warm.. so I decided to send it back directly to Yaesu.. I'm not sayiong anything bad about RT Systems, but the radio had a defect all along. Just a thought.

*i couldn't agree with you more, and think i just might sell out, they are
*just giving the bands away, but one thing, at least they are keeping some
*code, that will still keep some of the cbers out, but 75 meters allready
*sounds like 11 meters anyway. i got my extra back in 1989, and passed all
*the code requirements, and i am blind on top of all that.
****

The code provision had to remain due to treaty. The ITU requires that all amatuer licensees operating under 30MHz must have proficiency in code. The ITU does not mention at what level is considered proficient. I got my Tech class license in 1977 and the 80 M band was not any better than it is now. I also have a BSEE degree and feel that element 4A and 4B are easier than many of the EE classes that I took. I just see no need for element 1B, and 1C. To me it does not mean I will operate on 3890 KHz any better or worse. Besides to operate on 80M phone you must have to operate with a general class license or higher. Until 4/15/2000 that still requires a minimum of 13WPM code. If I were to try and draw some conclusion from you post, it may seem that as one becomes more proficient in code, one becomes a better operator. BUt at this time I will try and refrain from such endeavor.

Why not????????

Why are you afraid fo these people calling you a cb'er?

If they were true "hams", they wouldn't be doing it. Did these same people raise this much hell when the code was dropped from the tech ticket? Call me anything you want, but thanks for the opportunity to have a chance to finally get on hf ssb. I promise I will leave your cw alone, if you stay off the ssb bands.....

What is the problem with all these old timers not wanting ANYONE to suceed without blazing code speed. I am 47 and have been interested in this hobby since I was 12. I have a vintage Heathkit GR-64 shortwave that my dad and I built back then. Still works. I caught the bug and have been involved in electronics ever since. I couldn't get the code back then, and it kept me out. Strange thing, I could send, but not receive....true. I know as much or more about electronics and what makes things tick as probably most of these old farts that can pound out code and talk to each other. Good for them! I just got my tech ticket back in April. I found out the test was being given.......I studied some questions from hamtest.com and walked in a week later and passed. Should my 35 years of electronic knowledge not be taken into consideration. Now I am downloading programs as fast as I can to get to learn 7 wpm so I can pass this test and full fill my life long dream of working hf ssb. I do not want to stop all you cw lovers from enjoying cw, why should you want to stop me from enjoying ssb? Besides..........no one is taking anything away from you! Cw will still be here for you to enjoy as long as you want, but since my life is now half over, can't I enjoy what I would like. The boundry is still there for me, morse code, the only thing that is different is that i have a much better chance of passing 5wpm, than I do 13. And I remember, when I was 12, there were no "no code" tests, or I would have been on then. novice was 5 wpm, and all you got was 2 meter phone, everything else was cw. Technician was 5wpm and you got 6 meters and up. So how about, give me a break, I still have to learn your beloved cw or I do not get in, again!
Jon KG4DIR (and dam proud of it after waiting 35 years to get it)

YEAH - but it sure seems stupid to put out the "WELCOME" mat for them in Amateur radio... Few of us felt the urge to go over to 27 mcs to "enjoy" their company - why would we feel compelled to invite THEM over where WE live? We don't do that by inviting welfare bums, drunks and similar low lifes into our HOMES - why would we assume it's a "good thing" for our hobby? If we as individuals felt so deep a need for "company" and "association" to do the above, we have FAR more problems than mere loneliness - the same holds true for Ham Radio... And just more mere *numbers* will NEVER be the FIX!

You are mostly correct - but observe the latest commentary from the ARRL on the subject on their website, and notice how they are falling all over themselves inferring what a wonderful thing it will be - a 180 from their Incentive Licensing stance not that far back...

AND, it's a pretty far stretch to scrape up durogatory comments and assumptions based merely upon his equipment listing - desperation perhaps? *I* also have some old AM gear - a Gonset G-28 for ocassional use, and an old Central Electronics 20-A for nostalgia purposes - does that make me some sort of electronics misfit as well? Must we all own and use the very LATEST technology to fit YOUR interpretation or our reason for being - or are you merely reaching here?

Butch, you simply have missed the point.

Why were the code levels on the license levels in the first place? Did you look back at the history of Ham Radio and see what the motivations of the FCC were when they made those requirements? They were, in fee simple, *incentives*. Originally, it was all flat. No different levels. But hams said that it would encourage them more to increase their skills and to achieve more if there were levels to attain as incentives for continued study. So the FCC created the license levels. The intent is clear -- to provide opportunities for growth, and for ways in which amateurs can help fellow amateurs become more skilled.

It was not, as you and others like you seem to think, a ham radio caste system designed to show how *enlightened* one is, like the Path to Nirvana. It isn't meant to be an "us vs. them" sort of thing. These people aren't your enemy, and aren't to be despised because they haven't achieved what you have. They are to be befriended, helped, encouraged -- not spat upon as dregs because they can't do what you can do.

You have been given the authority to operate in certain bands on certain frequencies and with certain modes that are different from what others may do. This is not a right. This is not a gift. You earned it. But with the authority comes an equal and converse responsibility -- to perpetuate it, and to pass on what you have learned, to help others achieve what you have achieved...or to simply achieve according to their limits and desires. You, as well as all other amateurs, have a responsibility that goes along with your ticket, the responsibility to use those privileges in a way that perpetuates the arts and sciences of amateur radio. To draw lines in the sand and say "you're not GOOD enough to associate with ME" is contrary to this responsibility, and is delinquent in your duty as a good Amateur.

Butch, you were given the keys to the playground because you said you were responsible enough, not only to play safely on the equipment...but because you said you'd share with the other kids. If you don't believe me, go re-read (or read, if you haven't yet) the Amateur's Code. It's the first code an amateur should learn, even before Morse code. It's time to stop being a selfish little child. Grow up and help some younger kid climb the monkey bars.

I can't copy at 5 wpm yet either, Butch...but *I* gave a copy of "Ride the Airwaves with Alfa and Zulu" to my 12 year old stepdaughter, who I coach in FCC rules and regs. Have you done similar? Lately?

LEGAL CABLE TV DE-SCRAMBLER

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV Descrambler
You can assemble it from Radio Shack parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A DESCRAMBLER LEGALLY

Warning: You should not build a TV Descrambler without
reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the descrambler work on Fiber, TCI, Jarrod
and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing cable system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a Descrambler LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

Cabletron FREE-TV
12187 S. Orange Blossom Trail #116
Orlando Fl 32837

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

Bill,

Scope tubes can be rejuvenated. A television picture tube rejuvenator
can be used. You will have to rig connections. Be sure to get the
correct filament voltage and start with the gentliest boost setting
before opting for the cathode blast.
I HAVE done this, it works and has continued to work. It won't fix tubes
that are gassy, have open filament and some gun defects.

Chaz :-)

And an even larger percentage of folks could NOT care less about you
or things you feel are important in your life, yet those things are
still important to you, right? One thing we are assured of is that the
folks participating in this thread do care, so for calculating
our base for your percentage, we should not use "all human beings."

>> Don't worry about your pathetic little
>> world being overloaded with newbies, they aren't interested.

Again, the base for this percentage you want to use isn't "all human
beings," but rather licensed amateur radio operators.

>Exactly, there was a time when being able to communicate all over the
>world using your own shortwave equipment was a fascinating thing, today
>anyone can pull a cell phone out of their pocket and call almost anyone
>anywhere in the world.

If you don't mind using millions of miles of telephone company cables
and billions of dollars of corporate- and government-owned computers.

The attraction to worldwide communications via amateur radio is that
one has very little dependence upon those things cellphone and inter-
net users depend on.

>Most people don't ever know what ham radio is (or
>think it is cb radio) and could not care less.

That's the way it's always been. Most people don't care about coin-
and stamp-collecting, but that fact doesn't diminish those hobbies.

Really? Try pulling up alongside someone with a cell phone and shout out your window, "hey I'm talking to Australia on my mobile ham rig, ain't that impressive?" They will really be impressed as they dial a few numbers and talk to someone in Hong Kong with no fading or static. They don't care how it's done, your ham set isn't going to impress them one bit.

Yes, all of these things you mention do contribute to amateur radio. The impetus toward desired satiation is best achieved through scarification of the procedural host. Therefore, all contribute.

I believe you would need an (illegal) software program called "Lab
Software" for the Radius. With this you can essentially change the
personality from the 16 channels to one like the 32 channel Maxtrac. You
will lose the signalling options of the radius, though. Don't know who can
provide you with Lab Software either.

We sell the VX400's and can tell you that unless your people are going to take care of them, expect to send them in for service. They are great radios but are not meant to be dropped or abused. The top accessory button falls off, as does the volume knob. The PTT cover also comes off. Forget the belt clip, the screws loosen up too much. These radios are ideal for people who take care of things. I own four of them and have not had any problems. But every VX400 customer has sent theirs in for service at least once. They are not in the same league as the GP300's which we have also sold (they are now disco'd by Motorola). A good middle of the road radio for the same price is the Icom F3S or F4S radios.

What we need in a digital age. ENCRYPTION!
>It's our *only* privacy. You won't know how important >privacy is until you LOSE it.)

Forget the restructuring issue.

Isn't it passed time we introduced encryption into Ham Radio; making it *legal* and making it work? This is truly the defining hard-won issue which will determine the rise or fall of Ham Radio. Determine what it's really good for
and who will take part in it We need to work it out! We've pioneered cellular, PCS, GSM and much, much more. We need to change and so does the Amateur Radio Service. Why do we need to purchase and pay fees for multiple devices and services when we're Ham Radio experts? Do we really need to hear other peoples conversation on every channel???? We need our own design innovation. We need the freedom to experiment. Isn't this America? Why can't this be done in a manner where our old equipment works just fine? It can. Who cares if we use part of the bands for our new stuff if we leave other parts for old equipment. That's just one example. Why can't we work it out? If we don't, we're doomed.

The time for free experienced radio operators at our expense has passed. Continue to promote emergency service, but that is not enough!

I have searched high and low for this but can't find anything.
I am considering another vehicle and will need to move my 6M mobile setup to it. I have my 706 remoted now and need to do it again in a new car. Currently my center console is/was high enough that the 706 head was mounted on a short stand.

I will need a longer one. A while back I had a catalog with all sort of automotive stereo,video and alarm components. One item was a black 24 or 36" gooseneck that had a tang on the bottom that your seat to floor bolt went through. I thought that it would be perfect and promptly lost the info.

Anyone know where to find one?

Just a wee bit curious about something. If the FCC decides in 10 or
15 years to eliminate all testing requirements for a "Ham" license,
would you be in opposition to this policy? If your answer is in the
affirmative, what would be your answer to a new age "ham" who might
berate you for being an old fashioned intellectual elite snob?

I would like to buy the following accessories for my FT901DM rig:
SP-901P Speaker
FV-901DM Remote VFO
TTV-901R 70cm,2m,6m transverter

Must be in very nice condition and in perfect working order.
Name your price. Please reply directly to blueglow@mindspring.com.

Thanks,
Mark

We have an RC85 with the V 5 upgrade that has picked up this peculiar problem since Y2K. It's lost the clock, scheduler, and female voice. At least that's all we've seemed to find so far. All the macros are intact and autopatch works. Anyone know a fix for this? I tried to swap out the clock module for another one but I'm not quite sure of the one I had. HELP!!

E-mail me at n9lzk@arrl.net if you have any info on this problem or are experencing this problem with the ACC RC85 and have corrected it.

1127. Yaesu FT 301D

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-09 00:00:00 UTC
From: Mike <michaelj@networktel.net>
Message-ID: <Owbe4.94$G3.9954@news1.atlantic.net>
Source record: 89159

I have resurrected an older Yaesu FT301 from the dust collection. Currently I am finishing a 40 amp power supply to run this unit but have a 15 amp power supply hooked up to check out the receiver side of it. With several dipoles, it seems to be fairly sensitive.

My question is for any other Amateurs who have this unit or have run this unit in the past. What are your experiences with it. Short comings. Strong points. Modifications that are mandatory and or helpful. Accessories that are available and useful.

Thank you in advance!
Mike

Message-ID: <ywce4.1415$78.27995@news.uswest.net>
Source record: 89166

Well, guess what...I'm going to be a 13 WPM Extra...PHHHTTT!

Also, being in the commercial 2-way repair business for many years, I feel that I have WAY more technical knowledge than ANY Extra class out there who feels like he's been cheated out of a good thing. I felt cheated when you consider the elimination of the 1st Class FCC Phone license in favor of a General Class ticket. Know what, I DIDN'T QUIT MY JOB OVER IT!!!

What a jerk! And STOP blaming the ARRL for your problems. We ARE the ARRL and if you aren't a member, tough! If you didn't vote, last year, you have NO room to complain about who's in office now.

Incentive licensing didn't "kill" Ham radio. The general population of Hams around the world has been growing. And stop picking on the CBers...who the heck says THEY are the problem. Who did the study that proved CBers were a major source of Ham operators??? Many (if not most) of them aren't motivated enough to take a test to become Hams. Why should they bother? Also, those CBers who become Hams do it to get OUT of the rat race on that band, not to drag it INTO the Ham bands. Excuse me while I wipe the foam from my mouth...

I know Extra class Hams who not only know less about radio than my NoCode Tech XYL but couldn't copy an SOS at 5 WPM today. Does that make them better than the newcomer who has to pass a 5 WPM code test in a couple months? I know Extras who never get on HF...they upgraded to become VEs so that they could bring MORE people into the hobby they love so much. Does this make them "bad" Hams?

Open your eyes folks. If you don't like what Ham radio is today, get out. You'd probably be whining about something else tomorrow, anyway. Leave now and stop bothering those of us who want to enjoy the hobby. Better yet, start up your own magazine where you can whine and complain all you want (like Wayne Green) and make money from it. Then you can spare us the Internet bandwidth along with the radio bandwidth.

There, I feel better!

Randy

Yes, for some modes. PSK31 is one of them and there are several SSTV modes
available. Do a search on the ARRL Web site at http://www.arrl.org/
that should get you started.

If you need more help, Email me direct and I'll do a little more digging.

Radio Shack is just like any other convenience store. Ever check the price of a gallon of milk at your local 7-11 Store?

If you want the lowest prices, you have to hunt. Once you find a seller, hang on to that phone number. It will come in handy in the future.

Radio Randy

>berate you for being an old fashioned intellectual elite snob?

One I would be in oppsititon to this sort of policy, but I
conceed some similarities. However the charge that those who suport
the then Old order as intelectuals, come on If such a movement comes
into to being I do hope for their sake they pick a better slur than
that, nobody in anything close to thier right minds is going to call
our testing procedure excessively intelectual. While I did and do
adknowledge some simlairities between the idea of NoCode and No Test,
there are big differences. One we test on rules rules knowledge in
part, something that will always be defendable by the FCC. Two we test
in part for things related to safety issues, this will also be
defendable as in the public interest. Three the current tests (i'll
not say what they are like in ten years) are not so hard as to be
burdensome on people. These three things mean that Code and the
written materail, are always going to treated differently since can
without code knowledge, operate legaly and safely, while assuring
legal and safe operation without any testing is much harder. That said
I am of the school that says , IN AN IDEAL WORLD that WE DO NOT have,
I would favor NoCode No Test, thus I view testing as a neccesary evil,
not as a good thing in it's own right. I do conceed it is possible to
chalenge the testing of anything more than a very minimal level, in a
legal sense, today. that is one CAN argue that much of the materail we
curently test for is not clearly within the power of the FCC. I do not
care to make that case, and I believe it can be beaten but a case can
be made

My question is: Why is Radio Shack more expensive than other stores? Case in point: I just wired up my house for TV and telephones. I didn't buy any cable, connectors, wall plates or splices at Radio Shack because they were twice the price of the local hardware store. I find it hard to believe that RS doesn't get better pricing than local stores on these kind of items.

Hi,

Tried it....very nice. But one thing I'm not sure is the speed. At
10 wpm it seems so slooowwww! Is it very accurate ? I've put it in 20 wpm
and it seems the only speed that make sense to me. Maybe that's because I'm
on Win2000 ?

It make a good practice program. Any program that send the output
directly to the sound card ? This way i'll be able to put earphone.

No, no, no....I wasn't recommending that a LICENSE be forged. Just put a
piece of paper with some bogus writing in a nice frame, hang it on the
wall by the expensive rig (I didn't say that he needed to USE the radio),
and then the gentleman can have ALL of the satisfaction which he appears
to derive from his amateur radio license: A FANCY, OFFICIAL-LOOKING
L_A_B_E_L, nothing more. No need to even power-on the rig!

He said it himself, the LABEL has lost its value now that it doesn't set
him apart anymore (after restructuring). I'd like him to have a nice,
fancy, official-looking label again, so he can feel good about himself
again. If he does what I suggest, he can have the nice, fancy,
official-looking label back, but without wasting all of that time on the
distracting AMATEUR RADIO stuff.

> >While scalding, that was very well said Nick. I indend to get my license
> >someday. This is a very VERY new interest of mine, and I go into this

> >remarks while scalding, are well said...
>
> Since you think Nick spoke the truth, Does that mean you intend to
> forge a license, as Nick suggested?

No, it means that he's getting his kicks from RADIO, not from the piece of paper. It means that he can tell the difference between a superficial label (a piece of paper) which says "amateur radio" on it, and being an actual amateur radio enthusiast (unlike the gentleman to whom I was responding).

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a remote kit for the 8100 for sale.
This kit is NOT complete but have the following:

Subpanel nest (MMB-61)
Controller extention cable (MEK-1)
Speaker extention cable (CT-6L)
Instruction manual & box

This kit is missing most all the screws
(Except two that hold the remote head cable on)
The mic extention kit and mic extention cable.

If you come up with a extention for mic and some screws you have it all!

$35 plus a few bucks shipping

1182. Updated Motorola HT-220 Page

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-09 00:00:00 UTC
From: mikeyht220@my-deja.com
Message-ID: <85b6mj$19e$1@nnrp1.deja.com>
Source record: 89231
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

The HT-220 Page has been updated with UHF tuning procedures and more articles in the Tech Tips section.

This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.

See http://www.batnet.com/mfwright/HT220.html

Back in the 20th century when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969.

HT-220 is Y2K compliant.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I never thought the old rig would attract a cult following!"
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

You're starting to lose me on this, Dave. I wasn't the one doing the
crowing.

I think you certainly did. You started throwing terms like "old fart"
to describe those who don't agree with your perspective on things.

> Maybe I should have just said "Bigot". Look up the definition, and then
> try to tell me that many of these guys (including you it seems) do not

> hurts that much, maybe you should re-evaluate your point of view.

If I don't think the FCC's move was a good one and that simply does not
make me a bigot. It makes me someone with a very different opinion than
yours. Oh...what "truth" are we discussing?

> > > There's a difference between "liking" someone, and tolerating someone.

The world is also full of people who may agree with me.

I see it as you have 2 choices. Accept, tolerate, and
> understand, or stick your head in the sand and be miseable. Which will
> it be?

Hell, Dave--I have many more choices than that. I do understand. I
don't accept. I'm not sticking my head in the sand and I'm certainly
not miserable. See, I don't have to go by your list.

> As to liking me or not, that is your choice as well. I certainly won't
> lose sleep over it. As for tolerating me, well, as long as you continue

> debate this on a factual basis, I'd be up for the challenge.

You don't seem to understand how things work. I not obliged to tolerate
you. I can respond to your posts as I'm doing now. As to my opinion
vs. your opinion--I like mine.

I'm beginning to see a pattern here. If my view doesn't coincide with
yours, it's narrow, huh? You've used a bit too many metaphors for me.
As I understand it, you're a messenger for something or other and your
vision is of things swimming, walking and quacking which are not
chickens. This is starting to read like the book of Revelations.

> Whether or not someone "throws in the towel" or not is their own choice.

> over it, move on, or move out. Simple as that.

You're right. Getting out of amateur radio is an individual's own
decision to make. I certainly don't feel that many will take such
drastic action. If your inferiority complex doesn't allow you to
coexist with those who don't share your opinion, don't expect others to
vacate the bands just to salve your feelings. You see, no one is
required to move on or move out.

> >

Thanks for permitting me to stay. I don't know if I'll be able to
contain myself as far as the preaching if the guy designing the
algorithms is a lid on the air.

> decide it. The FCC already has.

Anchildas must be some new Mexican dish with anchovies. I don't
question whether anyone will be a real ham. If an individual passes 5
wpm and the written exams, there'll be no doubt that the person is as
real as hams are ever going to get these days. What matters to me is
that person's on-air practice.
> >
> > > >

I have money for coffee and dogs. You seem to think that I should be keep mum on my feelings on the new changes in the regs. I'm not going to play the game of political correctness.

> > I've never settled for mediocre in anything I've wanted to do in this life

> obsolete things. At some point, the rules have to change to track with
> improvements in technology.

Oh, B.S.! CW was and is a viable and popular mode. It is still in wide use on the amateur bands. It doesn't matter a bit whether anyone in commercial services use it. We aren't commercial ops. Anyone whose license permits the use of CW should not have a problem demonstrating some skill in its use.

At some point, we have to acknowlege that
> morse telegraphy is just as old and obsolete as horses and buggies. So
> at what point do we finally stop testing for it?

A good point would be when its use is neglible. We aren't even close to that point yet.

Do we dogmatically
> continue to test for CW into the 24th century when people are Star
> Trekking around the galaxy?

I don't think it'll matter a bit to either of us.

No one is demanding "easier access" to ham
> radio, just access that is more in line with the technology of TODAY.

That is an outright falsehood.

> You can give me the toughest theory exam that is relevant and I'll study
> for and pass it, because that is what is required TODAY.

Me too--and I'll pass a code test to boot.

> I am a man of principles. I just couldn't see the relavance of CW.

...and because the light never dawned for you personally, CW was, in your eyes, irrelevant.

> I refused to allocate slots of my precious time, to learning a skill that

Don't give me no jive about your "precious time". If you found time to study the theory, you could have nailed the code. I'd hate to think

that I wasted eighteen years of something I wanted in order to wait for
a "gimme".

> It's unfortunate that the FCC didn't revamp the theory tests. They are
> way too easy now. I passed all of the current the internet sample tests

Those radios are very old and have problems with the display and tx/rxing on different freqs than what is displayed. Its design is ancient by todays standards. It only has 6 mems and the pezo beeper goes out in all of them. I had one which I sold for a 100 dollars about three years ago. They were nice for their time but would surely be worth squat now. Vest your money in something newer.

Ameritron AL80A H.F. Amplifier - S/N #039
Covers 160 thru 15 meters - not modified
New Eimac 3-500Z (new old stock from North Carolina dealer)
Less than 1 hour on new bottle
Wired for 220VAC
Copy of Manual
A few minor scratches on top of cabinet, very minor, no dents
Front panel has no scratches or blemishes
Purchaser pays UPS Shipping from ZIP 19403
Will be packaged securely, Tube will be pulled and boxed seperately

Sell outright - or - trade toward mint Ameritron ALS600 w/power supply

Reply via e-mail address. Thanks - 73 - Neal - N4XU

Why should it not be a problem, clearly an untrue statement
since after all I have a license that permits the use of CW, and yet I
personalyhave no such skill. The claim you are making here has not
been true for at least 9-10 years now. I expect it was not true for
some before that even. That is I firmly belive that even when it was a
requirement for license holders that there were many that could not
domtrate that skill.

As to popularity, it would seem that jamming profanity are
also popular in parts of the ARSm should we all be required to prove
our skill at those to

>that point yet.

IYO. in mine and others a much better point is when it ceases
to serve a function whereby the prupose of the ARS is clearly advanced
by making all operators of certain prevelges donstrate that they might
have some skill, which is the current level of testing for Code

OTH it's use is neglible in the scheme of things, which is
where we come to issue of everyone else is doing. Morse Code use is
negilble in the world of Radio alone. It is the third or fourth most
popular mode in the ARS as a whole (behind FM SSB, and the digital
modes combined) It is number two in HAM HF, but a poor thrid to AM
and SSB, in HF as a whole. It remians the number one mode in CW
operattions without regard to the band they are in however.
>
>Do we dogmatically
>> continue to test for CW into the 24th century when people are Star
>> Trekking around the galaxy?

>
>I don't think it'll matter a bit to either of us.

There in my case you are wrong, what we leave for the future
is important to me and many other hams. It is OUR debt to Ham radio, a
fact you seem blind to.

>
>No one is demanding "easier access" to ham
>> radio, just access that is more in line with the technology of TODAY.
>

>your eyes, irrelevant.

Indeed here I will conceed that you MAY have the beginings of
a point, alas THE BIGGEST PROBLEM CW advocates have is that they have
been unable to transfer this awaresness to anyone not amoug them. Of
course You still seem blind to the notion that perhaps, just perhaps
we are right and it is irelevant, and that maybe your adherance to it
is merely a quais religous one

>a "gimme".

Sir I for one am turely sorry that you were forced to waste 18
years of your life on anything. I futher assure that were it within my

power I would undo that for you. That you were treated in unjustly was and remains a tragedy for the yourself and the ARS. I and other see no reason however to contiue an injustice simply on the basis of your suffering. That "logic" would have meant that the US should never have freed its black slaves in order to prevent their ancestors lives and suffering from being wasted.

In adittion your assertion that having time to learn the theory is enough to also learn the code is plain false do you turely not know that?

If I remember correctly, you were one of the people making comments along the lines that people who become "new extras" would not be considered "real hams", or would be inferior. To me, that is the same as "crowing"

> > No, I did NOT say that anyone that does not share *MY* personal views is

> to describe those who don't agree with your perspective on things.

Being open minded, tolerant, not being stuck in the past, non prejudicial and accepting of change is my perspective. If you wish to align yourself with people that are the opposite, then you are an "old fart". You may disagree with my perspective, and that is your right, but I believe that my viewpoint is likely to be more socially responsible.

>
> > Maybe I should have just said "Bigot". Look up the definition, and then

You can disagree with the FCC's decision, that's one thing . But if you look down your nose at people that have taken advantage of the FCC's "mistake", then you ARE being a bigot.
> >
> > Bummer! The world is full of people that may not agree with your view of
> > things.
>
> The world is also full of people who may agree with me.

Yes, and I'm sure that the members of the KKK think the same thing.
Because there may be a quantity of people that share your viewpoint,
does not mean that it's necessarily the correct one.

>
> I see it as you have 2 choices. Accept, tolerate, and

By complaining about something, you are displaying your displeasure.
You are obviously bothered enough about this FCC deal to motivate you to
let your displeasure be known, even though it will not change anything.
Maybe you're not miserable, but you're far from happy.

>
> > As to liking me or not, that is your choice as well. I certainly won't

> vs. your opinion--I like mine.

But you ARE tolerating me. By responding to this message, and continuing
this discourse, you are tolerating me to some small degree. If I can't
tolerate someone, I have to remove them from my presence, otherwise they
will cause me to get angry. I want nothing to do with an intolerable
person. I won't converse, or even allow myself to hear someone I can't
tolerate. I doubt if I make you *that* angry. I should not be that
important. Only people that matter should provoke strong emotions.

The pattern is that if you have nothing to say, that could deny the
statement, rip it apart for style.
The point is still valid that if "old time" hams cop an attitude with
newcomers, simply because of the new requirements, they are displaying
prejudice. If you fit into that group, then you are as well. If not,
then this doesn't apply to you.

>

> required to move on or move out.

I have no such inferiority complex. If someone cops an attitude with me,
they'd better be prepared for what comes back. And I'm not the one that
"expects" anyone to vacate the bands. I'm just repeating some of the
comments that I've heard. I can remember the "old farts" that I heard on
the air, belly-aching back when they started novice enhancement. They
couldn't STAND the fact that novices were getting phone privileges on 10
meters, 220 and 1296. Many of them stated that they were going to sell
any equipment that they had for those bands. They didn't want to
associate with novices. They felt that they were somehow "better" than a
novice. These same people pitched a bitch when the no-code was passed.
THESE are they types of people that I HOPE throw in the towel. I'm
sorry, but no one needs to be subjected to THAT kind of attitude. Ham
radio does not need people that discourage newbees. Ham radio needs more
elmers. I can't make these people leave, but I can HOPE that they get so
disgusted, that they leave on their own. *MY* feelings are not the
issue. Like I said, someone like that will get a verbal dressing down
from me if they cop that attitude. I'm just concerned about newcomers
becoming discouraged and leaving the hobby with the impression that
ALL hams are like that. I want to go on record as saying that I
welcome any newcomer, and will help them out as much as I can.

>
> > >

> algorithms is a lid on the air.

And there it is. That little prejudice. You believe, deep down inside,
that lack of CW proficiency automatically makes this guy a "lid". You've
already formed an opinion before you even get to know them. THAT was
what I was talking about.

You'd just better be careful that this guy doesn't think that YOU'RE the
lid, for wasting time learning an obsolete telegraphy skill rather than
becoming proficient in modern digital communications techniques.

>
> > > > Bottom line: your opinion is irrelevant. The law is the law.

> practice.

That's fine. But if you look up the guy's call first, and discover that
he's a "new general/extra", and then expect him to be a lid, you're not
being fair.

> > >
> > > > >

> only be irrelevant to you.

As far as the subject of whether someone is a "REAL" ham or not, you
opinion IS irrelevant, since the FCC (the only voice that matters) says
that they are.

No problem, make your feelings known. But it's still a done deal, and
nothing you can say will change that. So any "venting" that you do is
nothing more than "sour grapes". So what remains is how you are going to
deal with the new people. Will you give them the shaft, and tell them
how "inferior" you think they are, or will you give them the benefit of
the doubt and help them in?

The only reason that CW is used at all is because we dogmatically
insisted on requiring it. If the commercial sector has abandoned it,

wouldn't you think that they had a good reason for it? I predict that
now that 5 WPM is the limit, that CW usage will drop off dramatically.
And THAT is what scares the "CW forever types" the most. Less usage
means that eventually the FCC will reduce band space for it.

Study? Who studied? I could pass the theory tests, drunk off my ass,
after 36 hours of no sleep. I live and work with this stuff. Code, was

not something that I needed, wanted, or had time for. I wasn't about to take time away from my many projects to learn a skill that I never intended to use. It makes no sense to do so.

I have for sale the following items-
1) Icom IC-251A 2 Meter All Mode Tranceiver.
This Radio is in Good to Exellent condition.
10 Watts SSB,CW 1-10 Watts FM
Comes with a Hand Mic.,Icom SM-2 Desk Mic. and Original Manual.
$300.00 Shipped CONUS

2) TenTec 1209 2MTR-6MTR Transverter.
Exellent Condition!
This is an almost new factory built unit from TenTec.
8 Watts out on 6Mtr.
$130.00 Shipped CONUS
(Works great with the radio above!)

3)Mirage B-310-G 2Mtr. Amplifier.
Exellent Condition!
Watts Out 25 50 75 95 100 100+ 100+
Watts In 0.25 0.5 1 2 4 6 8
Built-in low noise GaAsFET receive preamp 15 dB gain.
Great for an old IC-706 or for the radio above.
$155.00 Shipped CONUS

I can email digital pictures of above equipment if intrested.
Thanks

Basic VHF, yes. But in order to get world-wide coverage (like the internet offers), you have to set up a more elaborate ham station. You also have to be cognizant of DX conditions, and the availability of DX stations. It's very much hit and miss.

Dave

1213. For what it's worth

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-09 00:00:00 UTC
From: James Giercyk <jgiercyk@inpro.net>
Message-ID: <38781733_1@nntp2.nac.net>
Source record: 89318

Hello all,

Lately I have been reading the numerous postings on this newsgroup dealing with the FCC license restructuring and quite frankly am a bit distressed. Forget the fact that this newsgroup is supposed to be for equipment...the restructuring issue transcends any other current issue. What concerns me is the 'us against them' attitude that I am taking from all of these postings.

Was this restructuring a surprise? Certainly the magnitude of it was, but the change in license classes was on the FCCs plate for some time, and everyone was aware of it. The tone that I am hearing from many is the hobby is ruined. Well, lets face the fact that amateur radio has been in the decline for the last 15-20 years. With the advent of the internet, we can talk around the world for free with no QRM regardless of propagation. Perhaps this was a way to 'boost' the hobby back into the forefront in the 21st century. I don't know what the FCC was thinking, but I am sure this played a role.

Where I stand on the issues is very clear, but I do not feel this is the forum for that discussion. You may reply to me directly if you would like to know how I see things. Regardless of what you think, consider all of the time that is being spend protesting policies that are inevitable. If we could bottle that energy and apply it to more constructive causes, imagine what we could make of our great hobby. That's right, the hobby does belong to all of us, and has always been designed to encourage new amateurs to get involved and, yes, upgrade their license.

I cannot think of the 20th century ham without also thinking of the 19th century blacksmith. In the case of the blacksmith, the automobile became the mode of transportation. Even the President of the United States had a car. The blacksmiths soon found themselves looking for work. In the case of the ham operator, the government seems to recognize the need for change in policy with the change in technology. If this were true for blacksmiths, perhaps they would have all been trained as mechanics. Some of the blacksmiths would refuse training and insist the horseless carriage would never catch on. Others would choose to find different work. The rest would have to work side by side with what would have been apprentices in their shop...newbies. I think you can see the parallel. But they would have survived. So you see, perhaps we are being a bit hasty when we say that the FCC doesn't know what they are doing. Let's wait to hit the iceberg before we abandon ship.

Best Regards,

James Giercyk,
N2SUB

Some food for thought... even with license restructuring, there are still more requirements to meet for the privilege of operating radio than there are for operating a boat.

Bill

1217. BRAND NEW MOTOTOLA R-1033 TEST SET

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-09 00:00:00 UTC

Hi:

I have one (Mint Condition) Motorola R-1033 Series Test Set left. This unit still has the luster on the case, looks like it was used once or twice and then put away.

The wholesale cost of this unit from Motorola is over $975.00, and the accessory cable is a extra $100.00 if purchased new.

These can be used on almost all Motorola Mobile and Base / Repeater / Paging Stations with the appropriate cable

Picture can be seen @

http://www2.4dcomm.com/metrotech/r1033.jpg

Asking $295.00+ $10.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

Monty

Sorry, but that isn't true.

The military recently bought a lot of morse code tutors from a
manufacturer, and at the present time I'm working on a PA especially
to boost the output of a back-pack digital transmitter so the
operators can switch to CW!

Yep, CW is right in the specs.

Now that doesn't mean we should be required to learn morse code in
case we have a little war, but it does prove the people who use
arguments like those above often state what they "think" is going on.
Of course that isn't necessarily what is really going on.

CW is a very reliable mode for exchanging information when other modes
won't make it through, and doesn't require a lot of supporting
hardware.

Like doing math with a pencil and paper, it will always have a place.
Especially if the amount of power and equipment available is very
limited, and communications is important.

The only problem I have with the amateur exams, and how the exams have
been changing, is how they are m,ore and more becoming a test of
memory and not actual knowledge.

The people who "just can't get the time or skill" and are waiting for
a free ticket have a right to enjoy the dumbing down (thanks partially
to Kenwood, who should have been excluded from input into amateur

affairs because they have a profit motivation).

But they should just keep one thing in mind.... many eight year olds (and younger) can obtain the highest class ticket under the present "testing".

The problem with amateur radio slacking off isn't the testing, it is a social change. We could give the tickets away like the ones received by filling in the forms that came in a CB radio box in the 60's, and we still won't get a bunch of new hams.

The only thing any of this will do is let the people who are too lazy to study upgrade. A lot of people will move up in class, but you can bet there won't be any great increase in numbers after a little initial surge.

This is a free pass to an Extra or General, and has nothing to do with fixing the social problem of people not being interested in how things work, working, or radio communications.

If anyone thinks this is a plus for all of us, they probably should think again.

I have a Motorola R-1100A code synthesizer for sale. The unit is in
excellent shape. Has power cord but no manual or test cables. I can provide
a picture of the unit if you need one.
Asking $200 plus shipping or trade for one of the following

Alinco DR-570 in working condition
Low power UHF repeater In working condition <10 watts or less>
Icom-45a
Icom 25a or 25H
Any synthesized 220 radio in working condition
UHF duplexers <NOT mobile type>
Motorola P-200/HT 600 UHF portable with good battery and charger
anything else that you might have that could tempt me!!

No, Steve, not "taking full responsibility for the FCC decision" ... just
being happy and gratified that the results are amost 100% in line with
what we recommended in our various comments. Many others were
also responsible for the outcome by their efforts in filing comments
as well. NCI's Board of Directors are proud to have been involved
in helping to affect the outcome in a positive and progressive way.

The FCC (and particularly the WTB staff who worked on this item)
are to be highly commended for doing a thorough job of evaluating
the comments and the situation in the ARS and making a decision
which is in the public interest and goes a long way towards
stimulating the kind of growth and progress which the ARS needs
to move into the future as a healthy service.

Nick,

I think suggesting people who take pride in acomplishments should
simply forge their acomplishments to save work is a very poor
suggestion.

I can't imagine why that would make anyone feel good about themselves.

>While scalding, that was very well said Nick. I indend to get my license
>someday. This is a very VERY new interest of mine, and I go into this
>interest late in life at the ripe old age of 26. I'm going to be taking
>some electronics classes at a community college in the meantime. Your
>remarks while scalding, are well said...

Since you think Nick spoke the truth, Does that mean you intend to
forge a license, as Nick suggested?

This all seems very strange to me. No wonder its so difficult to find
skilled help today. I'll have to check closer and see if the
credentials are forged or real. I had no idea this was going on.

I need a good TNC program for Windows 98

I have used wintnc 101g a while with an 486 and win95. I have upgrade for pentium 233mmx and the driver for the baycom is not fonctionning well. The rig transmit but not receive. The driver do not support the new com chip's.

I lookup the web site of the author for a patch and he as not upgrade the program since the 101g version.
It was a great program but i can't do packet with my computer

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

Right on!
I once had a lot of respect for the hobbt and the amateurs who had
attained amateur extra,no more,for two reasons.
1.I got my own extra in 7 months with no prior code or electronic
knowledge and only a high school ed.IT'S ALREADY TOO EASY!

2.This further dumbing down is just more of the same,politicaly correct
radio,t-ball of the airwaves,nobody loses no matter how little effort
they put in.

At least now my dog can get a license.

1243. Re: FT-900 owners: Rear of Face Plate-Whats this??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-10 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000110045902.21407.00001303@ng-cl1.aol.com>
Source record: 89048

Hello Tom,

I found out what I thought was an adjustment socket in the rear of the removable face plate is actually a Speaker Jack! I thought this speaker jack was a socket for a tool to adjust something, but I came across the three sentences in the manual that explain this to be a External Speaker Jack for use when the face plate is removed from the base unit.

Jason S. Hulet
W1WOW
"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

1244. MT1000 Low-Band

Source record: 89049

Hi all.

I'm in the process of getting my hands on an MT1000 42-50mc portable.

I'd like to program it to the amateur 6m ham band.

I have another in my shop (it isn't mine). I tried programming it but the highest I could get it was to 52.0mc. The software wouldn't allow me to program any higher.

I know know some of you guys are using these MT portables on 6m, would you please advise how you did it??

BTW, I tried the "shift key" method but it didn't work. I have also tried the MT1000 and P200 LB programming software, both giving the same results (52mc max).

Thanks for your help and 73,

Steve

1245. Re: Open letter to ARRL, FCC

Responding to K2TL:
The time for disagreement with restructuring, reduction of CW speed requirements, etc was when the matter was being considered by the FCC, last year. That time is gone now, and it's time for all of us to pull together to make restructuring work for everyone. Sure there's problems in the VEC system, we need to work on that, integrity is essential to maintaining respect, but for every rotten apple there's a hundred good ones, not the other way around. If we know of specific problems, we need to get that information to the proper authorities so action can be taken. Then we need to let them do their jobs.
Instead of tearing the system down and being devisive, we should all now be looking for ways to support the system and make it work. We all had our chance to voice dissent...no doubt you expressed yours as I did mine....but no decision the FCC could have made would have made everyone happy. The decision has now been made, and we should accept it like responsible citizens and get back to work.
No offense, K2TL, but your protest message and dire predictions can only do harm now, and divide us further. This issue has done some damage already to the ham brother/sisterhood in this country, and your help is needed, along with every serious ham, to heal that rift.
"Ham Radio doomed"...??? Only if you and I let it happen, my friend. In each of several instances over the years when there were major changes made, some well-intentioned hams predicted the demise of Ham Radio.... but...it hasn't happened yet. Somehow I think we'll all muddle through this one too. 73, K1MER

I just wonder if the number of people who have targeted
others with their anger, have bothered to register any kind
of complaint or displeasure with the people/agencies that
are ACTUALLY RESPONSIBLE for the Restructuring!?

Would you angry individuals PLEASE explain to me the logic
you believe you have in making others your target? Do you
KNOW what you are making amateur radio LOOK LIKE by your
own actions here in this NG? Have you DARED to vocalize
your opinions to any other amateur entities than this NG?

Explain to me your logic that allows you to insult, degrade, and dehumanize your targets of anger, when the people you target ARE NOT RESPONSIBLE for the FCC's decision and ability to enact/enforce Rules and Regulations.

For CRYIN' OUT LOUD....

From: Charles T Johnston <charles@ab7sl.com>
Message-ID: <85dpfncea1@nnrp02.primenet.com>
Source record: 89056

I've worked at least 2 dozen ops with that rig and they all sounded good on the air. The owners report the rig has a great receiver too. I think the 2 biggest drawbacks (if they are) to this rig is no CW and no PL tones for 10M repeaters. Along with the new CW tests coming April 15th I think radio Shack will sell a ton of these rigs.

> K2TL

I have a real nice car. It drives like a dream. It's good on gas. It's
really nice-looking, too. I worked hard to get it. It cost me a lot of
hard-earned money. But yesterday my neighbor was given a car just like
mine. So now I guess I have to hate my car. It no longer has any value
to me, because if my friend can get one for "free", and go out and
drive the roads same as me, well that's just not fair. He shouldn't be
allowed to have that car unless he worked just as hard for it as I did
for mine. With him driving the roads, all the fun of it is gone for me.
My car just looks ugly to me now. So long car, guess I'll just walk.

No offense, K2TL, but your reasoning is lost on me. How about taking a
little more positive view? With your years of experience, you can make
a big difference in the way things turn out. You can be a force for
helping the upcoming youngsters be better hams, learn how to do things
the right way, you can be an example and a teacher. You and I have both
been in this game 35+ years...we used to call them "elmers", didn't we?
We don't have to let Ham Radio slip away, let's do something positive.
Let's start by talking positive, not negative. Let's work with the hand
we've been dealt, like we have for all these years, and make it work.

From: Larry Menzel <retire@rconnect.com>
Message-ID: <s7ksfg9toj879@corp.supernews.com>
Source record: 89059

OK...I didn't do my homework very well. Sorry.

Mint VX5R for sale. Just like it came out of the box...even programmed for most repeaters and many ps freqs, (if you want it that way). Charger, rubber duckies, manual (ok, manual a bit worn, I carried it in my briefcase for a while learning to use the radio) and warrantee card.

5 WATT OUTPUT...incase you didn't already know that.

Just don't use it...it's a reallly cool triband handie.

$265 insured/shipped CONUS.

Message-ID: <IWue4.725$lz.4118@newsfeed.slurp.net>
Source record: 89060

The FCC stopped issuing 1x2 format calls quite a few years ago. They still issue the 2x1 calls when you upgrade to Extra and request a call be issued sequentially (it's one of the blocks you check on the form).

If you're interested in the vanity call method go to the URL below.

http://www.carroll-usa.com/vanity/

Mike keeps an up-to-date listing of which calls are available now and which are coming available when. He also offers instructions on how apply for a vanity 1x2 or 2x1 if you're eligible.

Good Luck,

Gary W5ZL

Darrell Franks wrote in message ...

Your short time is here.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher

You didn't take away anything, but the FCC sure did!

It's typical for those who dislike working for something and who
expect handouts to not understand why some people have pride in what
they accomplished.

With that in mind, I understand why you agree with the suggestion
people just forge documents that are symbols of what they accomplished
in life.

But I think picking on a guy who is proud he worked for something is a
sign of just how bad our society is getting. Socialism at it's finest!

For those folks who didn't set their RC-85's, etc. to 1971 before the Y2K
rollover, there is a code that you need to send the controller to get back
the features you lost. I don't have it here at work, but it was given many
times on the ACC Repeater Controller mailing list. I set my RC-850 and 85's
etc. to 1971 before the rollover and all is well...

So what? Are you interested in collecting licenses, or are you interested in radio? If you're interested in radio, then your license is just as valuable as your radio skills, no more and no less. If you're interested in licenses, then, I dunno, take-up fishing. You can get a license from every state!

> Once upon a time, a ham license looked good of a job application or

Here's my angle: I am looking at the person, not the paper. I guess that I'm too old-fashioned, eh?

> And it is still true that the value something has, to its owner, is
> directly proportional to how much effort one had to expend to get it.

Congratulations! You have identified the problem: The man is obsessing on "getting it". Getting what? A piece of PAPER. Forget the piece of paper. What matters is the knowledge, the experience, the fun. Paper is made from dead wood.

This is the ignorance Ham operators need to grow out off. One is *not* bad to want privacy. If you give up your privacy you'll have none. Is that hard to get? I looks like many people are in for a big suprise. I see you are "hiding" behide a name "dentronman". Maybe there's hope for you yet. It's your life.

Hello...

I have a very impressive key for sale here...it weighs a few pounds! It

has a highly-reflective finish and looks like brand new. Serial number is "8"...I have documentation to authenticate and can supply a .jpg of the actual key, if interested (I opted NOT to post it to the newsgroups...:-)) The key has a built-in keyer as well...it provides continuous "dits" (left paddle, adjustable rate) and "dahs" are done with the right paddle (single "dah" per press of the right paddle...) Contact spacing and tension are fully adjustable. This was made in a former military factory in Russia and was purchased 7 or 8 years ago.

Please e-mail serious offers only...I may also be interested in trades depending on what you've got...I'm particularly interested in military radio equipment.

73!

Licenses are not degrees. They are no more than permits. Thier value
should be nominal. You should evaluate an individual ham by his/her
actions, not by his/her license. Besides, one doesn't really need to be
a "tech whiz" to be on air. But for those that are "tech whiz's", well
congratulations. If "tech whiz's" are looking for paper recognition
(which is silly in my view), then perhaps a note or something could be
atached to his/her license -- however, there is no need for assigning
radio permissions based on this.

someone who just signed on > the dotted line. That's human nature.
> Dave

Regardless of how long it takes to study for the ham exam, the exam should nonetheless be relevant to the requirements of operating ham radio. That is, while the exam should take into consideration requirements, it should not place too much emphasis on those things that are merely desirable.

Hey Butch: If you would quit ranting and raving for a few minutes and take a deep breath I will ask you a question: What do you think amatuer radio is? It is amatuers, not professionals.....I happen to be both, and amatuer operator and a professional radio and television technician, broadcaster and photographer. I am 47 years old and have had an interest in this hobby since I was 12. It was then that my dad and I built a heathkit gr-64 shortwave receiver and I got bit by this bug. I tried to learn code then, and by then I mean when there was NO, no code tests for anything. As a novice you got 2 meter phone privledges and very limited cw on hf. Technician was 6 meters and above, and you had to do 5wpm. I could send, just couldn't quite get the receive down. I went through the air force technical schools for electronics and radio repair. I furthered my education with a degree from the national radio institute. I was then and am now more than technically qualified to hold ANY amatuer license. You will be distressed to know that i only hold a technician license, and I only got it in April. After 35 years of wanting to an amatuer, having already made it to the professional level, I found out when the test was being given,, took a few practice exams from hamtest.com and walked in with my money and out with my certificate of completion. I could not have done that without the knowledge and experience I have as a professional. So why don't you just get a grip on reality. Tell you what.....when I pass my general exam after april, I will stay out of your cw way, if you keep your dam cw pounding fingers off my hf ssb.
73's to you anyway, my fellow amatuer.
Jon KG4DIR (and dam proud of it after waiting this long to get it) and "one of them"

Hey Mike: There is no such thing as a stupid question.....there are just stupid people because they refuse to ask any questions. If we all learned what we know without asking any questions, then we wouldn't need teachers. And as an amatuer license holder, we don't need "Butch" holding one any longer. Whatever his "class" is, it is just about as low as you can go.....he has no class!

Ron,

Thanks. I have read a few places about lowering the voltage and or venting the LEDs to extend their life.

Would you have or know where I can find a schematic of the mod you explained.

I have noticed a very small drift in the receiver but I have seen worse. Given the choice between a FT101x (x being one of several models) ant the FT301, which would you choose?

Thanks!
Mike

Hello all, Ive recently inherited a 3 year old MINT condition 10 meter AND 11 meter rig, I have no use for it since im not a ham, I will NOT use this radio without a liscense, and since i have no intentions of getting my ticket, I would like to get it out of my house. Its really a beautiful radio, ive heard it over the airwaves too, and it sounded wonderful on SSB/and A.M. I know for fact it goes down to approx 25MHz and up to 28.500MHz or so. I know the rig sold for 525.00 dollars when my uncle bought it 3 years ago, but since I inherited it I would be willing to sell it for a reasonable price, 325-350.00 dollars and YOU pay for freight. If anyone is interested please contact me direct at my e-mail, (which i check daily) Thanks and best of wishes to the N.G.......Yours in the hobby, Frank

The advanced class won't vaporize after April 15th, while
no NEW advanced class licenses will be issued, existing
advanced class amateurs will be able to hold/renew their
licenses indefinitely and as such will be able to apply
for vanity calls under existing rules.

I suppose if you want to sign as "/20," to show
that you actually took element 1C and passed it
rather than upgrading on the basis of code exemption,
sure go ahead and do it. I'm not trying to defend
"resturcturing" as it came out in the FCC's final
R & O in December, but it's a done deal and I onlyActua
offered comment on how it affects currently licensed
amateurs. No doubt that many dislike the "5 WPM
fits all" aspect of restructuring, if you feel strongly
about it, you're perfectly free to petition the FCC
on the subject and ask that the 13 and 20 WPM code
elements be reinstated. If you are a VE, you can
renounce being a VE, return your VE credentials and
no longer participate in licensing new amateurs under
resturcturing.

And so we arrive right back at the elitist viewpoint that no one can understand an Extra unless they
are an Extra. But an Extra understands everyone else. This is the stuff that case studies are made
of. I wonder if the FBI has ever profiled an Extra?

> Yes...they exist in many portions of the ham band. But, I am willing

Two meter repeaters are SILENT, save the automatic IDers. No piles of shit there.

> Rest assured. The ten meter band from 28.3-28.5 is hardly indicative of the
> HF amateur radio spectrum.

True. It is far, far more civilized than what is found on 75 and 20M.

Nah, I'm not going to dump ham ɾadio, sell all
my stuff, and so on.

But, at the same time, anyone who buys new
equipment at a time of complete uncertainty,
is, in my view a bit nuts. So I'll hang on to what
I have. I am going to dump all the tube stuff.

And, I might add, get a much faster internet
connection. I think that's where it's headed.

But who knows?

Oooooohhh, Logic! I love it!

Yes, if the FCC decided to abolish ALL testing, I would very much be against it, as I feel that in order to be given the responsibility of running a high powered ham radio station, that you should be able to demonstrate that you know what you are doing. I believe that the testing should be periodically updated to reflect advances in new technology, as well as remove obsolete technology, and of course, FCC rules and regs. Right now, as I see it, Morse code is obsolete technology. Sure it is still usable to those who have an interest, but it is not necessary to know to operate a ham station.

Just as I would think it nostalgic and neat to build a simple AM tube transmitter 40 years from now, and use it to "relive the old days", the technology to make it, should not be required to know, for testing purposes, if all the common modes have become digital. It becomes optional, just like CW should be. If you want to use it, use it, but it shouldn't be required.

You bring up a very good point, and one that I agree with. I have never
been a fan of the VE system, as I know that the temptation by the
average citizen to abuse the system is just too great to allow them to
be trusted with the responsibility. I personally know VE's that have
"slid" people by with both theory and code tests (In fact, I was offered
a code "test" by one group, which I politely declined). I know of other
groups that do it for money ($200 for general, $300 for extra).

Back when the FCC administered tests, you had to deal with the
inconvienience. You had to go on THEIR schedule, you had to wait to
retest, and it was very difficult to "cheat" the system. Only the truly
dedicated would put up with this, in order to get their tickets. Maybe
if the license fee were re-instated and set at a level of something like
$50, the FCC would not be so quick to get out of the administrative
department, and the "quality" of the ham would be much better as a
result.

But in today's air of "instant gratification", many people are too
impatient to go through this exercise.

Is ham readio dead? No, but it is losing its uniqueness, and sterling
quality.

Yes, but look at the other side, with the testing requirments as they
now stand, a person with substantially LESS technical knowledge, skill
and discipline can obtain a high level ham license, with little actual
work. So the "value" of the license has been degraded, since it is no
longer necessary to be a "tech whiz" to get one.

> But it seems that this isn't enough for you. You crave that piece of paper
> which says "Advanced" or "Extra" on it, not because of what YOU are and
> what YOU have accomplished, but rather because of the mark the LICENSE
> PUTS ON YOU, because of the "specialness" it confers on you, because of
> the "distinction" which you believe it will afford you.

It's no different than the bogus network "certification", that
Mickey-soft and Novell started for computer professionals. It's a piece
of paper, that says that you know something. The difference is that MS
and Novell are making big bucks off of everyone that studies and takes
the test. But it's only worth something if you recognize the validity of
the testing methodology.

Once upon a time, a ham license looked good of a job application or
resume. Participation in what was then "the" technical hobby, was a
testimony that the job applicant knew enough to pass the tests, which
meant something to a manager looking to hire technicians or engineers.

Today, that is no longer true, except for some specialized
communications fields.
>
> If that's all you want, just have a fancy, official-looking embossed piece

> receiver. Only a tiny handful of people will know the difference.....
>

Maybe we just want to make sure that everyone who plies the ham
frequencies has enough technical knowlege to keep them out of trouble,
and enough responsibility and maturity, that they won't cause trouble.

And it is still true that the value something has, to its owner, is
directly proportional to how much effort one had to expend to get it. If
you had to apply yourself for the better part of 3 or 4 months preparing
for, and passing the test for a ham license, you will be less likely to
abuse the privilege, than someone who just signed on the dotted line.
That's human nature.

Hi:

Sorry about the typo error:

I have one (Mint Condition) Motorola R-1033 Series Test Set left.
This unit still has the luster on the case, looks like it was used
once or twice and then put away.

The wholesale cost of this unit from Motorola is over $975.00, and the
accessory cable is a extra $100.00 if purchased new.

These can be used on almost all Motorola Mobile and Base / Repeater /
Paging Stations with the appropriate cable

Picture can be seen @

http://www2.4dcomm.com/metrotech/r1033.jpg

Asking $295.00+ $10.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If
immediate shipping is desired) or a Personal / Business check is A-OK
too if you do not mind a Short Shipping Delay due to bank processing
time. This is required only the first time or two as once you are in
the data base, PrePayment is no longer required

So this is what I have to look forward to, huh? I'm sorry, but I resent the hell out of your sentiment that every new ham is an "idiot" or a "CBer". I am studying for my Technician's license (ready to take the test at the next hamfest) and look forward to advancing in the amateur radio service, despite the less than gracious welcome mat that you folks have laid out. The focus of Amateur Radio is helping people through the understanding and application of radio communications theory. From what I've seen, other than relaxing the CW requirements somewhat, the FCC hasn't lowered the entrance requirements to the point that it doesn't require hard work to attain the various level licenses.

I'm not meaning to single you two gentlemen out, I've been reading similar posts for awhile now and decided it was time to speak up. There are some of us who are just getting started in amateur radio that could use help and encouragement from the more established hams. I understand your anger, but you should be careful not to do more harm than good by callously tossing out such comments. Dig out your ARRL Handbook and read the Amateur's Code, based on this and similar recent threads we seem to have lost sight of something important.

Respectfully,
Mike

Hello,
I have forsale an ft-100 and the matching ATAS-100 Antennia. I bought it about 2 weeks ago thinking I would get back into hamradio, but I ended up not using it as much as I thought, so I would like to sell it. It is in perfect shape. It works great - the atas-100 tunes up right away on all the ham bands. The first day I had it I talked to mexico city. I paid $1400 from HRO two weeks ago - I would like to sell it for $1250. I think this would be a good deal for someone looking to buy this combo new as this is in new condition, but $150 less then you'll find it in the stores.

Thanks,
Reed

As a pre-1968 General I could roam the HF spectrum free of license class barriers. My license was devalued when Incentive to pass faster Morse tests Licensing was imposed. It was devalued because I lost access to spectrum that I could previously use. You are not losing any spectrum under the current restructuring. Your whine has no merit.

I will get back the spectrum I lost in 1968 come April 15, and I won't have to undergo any further Morse hazing to do so. If that chaps your shorts, too damn bad. You Morse speed freaks had a long run in the catbird seat, but it is over now. Get used to it.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

As a licensed Radio Amateur for over 36 years, and a long time member
of the ARRL, I offer the following opinion regarding the forthcoming
license restructuring;
Although I am 110% in favor of the CW requirement, I recognize that
it, in itself, is not a measure of a good Amateur Radio operator.
But, there seems to have been an unfortunate trend in the ease by
which a license is obtained. Reducing the CW requirement is another
step in permitting less effort for more privelege. Furthermore, there
is little doubt that the VE examination system is of questionable
integrity. Friends are cut breaks, to outright corruption. Sure,
there are some honorable VE's, perhaps most are. But anyone looking
to obtain a license can get one as easy as getting a parking ticket,
if he just know the right people. To argue this is simply denial of
the facts.
The emphasis seems to be "swell the ranks", not improve the ranks.
Make it easier so we have more, don't care about quality, just
quantity. Sell more radios, perhaps? No doubt, the Big 3
manufacturers are happy with this philosophy.
Anything you get for nothing has no value. Think about it and you
will know this is true. Anything requiring effort and truly earned,
will be honored, respected, and nurtured. Why do we implement policy
that will degrade the value of a license? Why not, just once, make it
something difficult, something earned, something valueable?
I no longer believe that the ARRL is promoting this hobby in a manner
which will cause me to be proud to be a Ham. I do believe, that in a
very short period of time, Ham Radio will become a vast wasteland,
where no one with any intelligence will wish to associate.

Brian,
The "stroke 20" signifies having passed and currently displaying
a technical competence to send and receive morse code at
a minimum of 20 words per minute. You dont have to be an extra
to play, but you do have to be able to Rock-n-Roll above 20 WPM.
It's kinda like what the FCC did when they brought out the
tecnician "plus" designator. Same idea.

Christopher-

I'm glad to hear that. I had read here that these radios still had the problem. Perhaps there were a few older units still in stock after the change was made. I wonder if there is an easy way to identify whether a radio was made before or after the design was changed?

Andre-

The problem showed up when a memory channel was programmed for CTCSS Tone Squelch. If it was among the channels being scanned, the scanning action would procede to the next channel before allowing enough time for a tone to be detected. Thus, activity on that channel would go unnoticed.

>And so we arrive right back at the elitist viewpoint that no one can understand >an Extra unless they are an Extra. But an Extra understands everyone else.

You know...never thought of it this way....but yes. No one can
understand
an extra on CW unless you can copy code at 20+ WPM. On the other hand,
we
can slow down and copy code at your slow speed no problem. So, yes,
you are right. I wont go so far as to say eletist. PhD's get to use
initials behind their names, why not those that can copy at 20+ WPM?
We can all sign "stroke twenty".... kinda like the "plus" in technician
plus.

>> Yes...they exist in many portions of the ham band. But, I am willing
>> to bet that there are fewer operating within the Extra Class subband than > > >> there are elsewhere.

>There are fewer Americans in the Extra class subbands and that in itself is >your answer.

Precisely, and those few happen to have passed the highest level of
technical
and communication competency examinations administered by the federal
government. Hence, they are likely to be more motivated to protect the
privelege that they have rightfully earned.

>> If you were ever on an HF band other than 28.3-28.5 (or freeband as you
>> elude to), you would understand
>> what the "CB bubba english" is all about. If you ever were operating

>

> Two meter repeaters are SILENT, save the automatic IDers. No piles of shit > there.

Uh huh. yea right. Just listen to the the K9KE 2M-10Mrepeater link system in your own back yard. They have a 10M FM link and we hear to the techie no coders here in Oregon all the time. Or, listen to the St Louis Repeater, Inc. repeaters, or the Suburban Radio Club repeater. Or the Egyptian radio club repeater. Lots of "wallowing in mediocrity". The old timers turned it off long ago and what is left is the "new standard" in ham communication. Of course, you can not blame those new operators, they had no elmering, and know no other way.

>> Rest assured. The ten meter band from 28.3-28.5 is hardly indicative of the

I read the other postings and can only speak from my own experience. I have had one for about two years. I purchased it for $175 from a local ham. I use if mostly for satellite work and an occasional VHF contest. I am quite pleased with it. I have not had one bit of trouble in all that time.

It has only six memories, can scan only 1 MHz segments at a time. It has 25w / 5w output selections. It is old technology, as someone pointed out, but it has a decent receiver and fine SSB audio. Sure, an FT847 would be much better, but IMO not $1800 better. Not even close.

> spectrum under the current restructuring. Your whine has no merit.

While the individual you responded to lacked civility, you at least owe him the truth--not just some Gary Coffman version of it. The idea behind incentive licensing was that those of us who held the general prior to 1968 lost some HF spectrum--a portion in 1968, more in 1969. In order to gain SOME of it back, one had to pass the Advanced ticket. It required NO increase in CW speed, only a more difficult written exam than the General. The frequencies gained were in the Phone portions of some bands. To regain all that we had, it was necessary to pass the Extra written exam and the 20 wpm code exam.

I waited a year before going for the Advanced ticket and nearly eight years before going for the Extra.

> I will get back the spectrum I lost in 1968 come April 15, and I won't
> have to undergo any further Morse hazing to do so. If that chaps your
> shorts, too damn bad. You Morse speed freaks had a long run in the
> catbird seat, but it is over now. Get used to it.

Now you've compounded your lack of candor in the earlier paragraph with a revelation of spitefulness in this one. I take it you'll not be spending much time on CW despite having regained some of the spectrum over which you appear to have harbored some deep resentment. Thirty-one or thirty-two years was a long time to wait. It might have been easier to get your hazing ticket punched.

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual ..... $ 40.00

(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger ..... $ 25.00

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks ..... $ 5.00

(1) used battery eliminator for the DiamondTel 90X ..... $ 5.00

(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X ..... $ 10.00

(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc. ..... $ 10.00

(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. .....(EACH)$ 10.00

(3) Brand New in the package NiMh batteries for DiamondTel (EACH)$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Mike, take a chill pill. Hams are NOT a progressive, techno-weenie bunch... but don't pay any attention to me, I'm just a new kid licensed at age 16 in 1963 and always amazed at how few other hams ever built or repaired any of their own gear. Hams, as with other humanoids, resent change in any form.When the Novice license was first introduced, even with only a 1-year non renewable license term, it caused howls of protest from many existing hams. In my time, I have seen the Conditional license come and go, the Tech license changed to limited HF (10-meter SSB and Novice HF CW) privileges, Novices extended to 220 phone and 10 Meter SSB and renewable licenses, with similar howls of protest and ads "Selling OUT, Novices and Techs BAH HUMBUG", etc. In reality the dreaded CB'ers have provided more skilled and reliable operators, during the CB heyday of the 1970's, than probably any other source of ham operators. Without them ham radio would have dwindled much more quickly than otherwise. Without the recent (10 or so years ago) influx of new Codeless Tech hams, we olde farts would have almost nobody left to talk to on the radio, storebought or otherwise, by now.
I've read the FCC enforcement lists in QST since first licensed, and the great majority of raging interference, license revocations for profanity, jamming, and other undesirable behavior, come not from new hams but from Advanced and Extra Class licensees. I'm over 50 now and still feel like a kid when attending hamfests and club meetings full of white haired, wheelchair bound, aged hams. My hair is getting ever whiter, and I hope that you go ahead with your interest in ham radio, and that others like you get into ham radio in spite of some of the weirdos you'll run into. All hobbies have loud weirdos, so don't worry too much about ours.
Jim W5AOX

Nice monologue, but you might as well be reciting it to a houseplant,
or sending it via CW to a no-code! :)

You missed the boat. You're too late. Life has passed you by. The
decision has been made, and your letter is in vain. Move on.

And no, I don't care if code is, or is not.

Stop whining about what you _think_ will happen. Most often, it does
not. The ARS needs to concentrate on what it _has_, not what the
individual is pouting for. It like, "Oh, God, I see a change;
therefore, the world is ending." or "Everybody think like me, and join
me in my paranoia."

Grow up, be constructive, OR be part of _The Problem_. It's _your_
choice.

Source record: 89142

If the Yaesu Ft-100 didn't break down so much it would be a decent deal for the $1080 I see at many Dealers. However, if the radio keeps breaking down time after time it could be a very expensive purchase with the downtime, shipping back and forth to yaesu and once out of warranty the cost of repair will be $$. I was hopping Icom would lower the Icom 706 mk II G to be more close to the price of the Yaesu FT-100.

I didn't understand him to say he was proud of the paper and ink, I
understood him to say he was proud of his efforts.

I'm not sure what the politically correct view of people who take
pride in acheiving goals through work is today. It may have changed to
the point where being proud of accomplishments is consider a flaw.

My opinion is probably out of date, at least according to the Ted
Kennedy school of water rescue standards. But I think he has every
right to place value on what he has earned.

IMO, suggesting someone forge credentials to be "proud" is shameful.

Tom, Excellent post.

The fact remains that the only "testing" within amateur radio that takes real work is the CW element 1B and 1C. The written exams are, by and large, easily memorized and passed. The CW exam, on the other hand, requires real actual knowledge and skill, not studying a manual and barfing up the multiple choice answer without understanding the theory behind it. Most americans are too damn "fat and happy" to understand this work issue. Everyone is looking for an "easy way" out of real work. From high school kids who cant read to extra class hams who can't do CW at 5WPM and memorize test answers. It's the same fundamental problem. Heck, My 3 year old can memorize things now and is already learning CW. Do I see a 4 year old with an Extra Class ticket? And to think, the bulk of the ham population is 45-65 years old. Pretty pathetic.

No lids ... No kids ... No Space Kadets. Class A operators ONLY!

K7JOE/20 (designating holding a real 20WPM extra class ticket who can send and receive CW at 20+WPM without a doctors note).

Here's the problem, Kim. You choose to pick on technical aspects
of my post without understanding the basis from which I write.
If you were ever an extra class ham (or even an advanced), you would understand
the difference between "cb type" operators and those not.
Yes...they exist in many portions of the ham band. But, I am willing
to bet that there are fewer operating within the Extra Class subband than there
are elsewhere.

If you were ever on an HF band other than 28.3-28.5 (or freeband as you
elude to), you would understand
what the "CB bubba english" is all about. If you ever were operating
on the "other side" of a pileup as I have for nearly a decade, you would see
what rude operating is all about. But, alas, dear Kim, you have not
experienced that so you know not what you speak of. Your "standard" is
simply lower because that is all you have experienced. And,
along with the rest of the 5WPM extras, you will settle on this mediocrity,
wallowing in a pile of shit since that will become the defacto "standard" of
operation. No different from the 2M repeaters
today in most metropolitan areas.

Rest assured. The ten meter band from 28.3-28.5 is hardly indicative of the
HF amateur radio spectrum. I encourage you to listen to 15M, 17M, 20M, 30M or
40M some time -- preferably CW, to see an example
of courteous international HF radio operation.

Once you have done that, you have room to comment on this matter.
Till then, I still contend you are not credible in arguing whether
or not the current day extra class operators have "lost" some
of our priveleges.

Hi,
I have for sale a Collins KWM-2 s/n 11140. This is a winged unit. The setup includes; 516f-2 power supply, 312b-3 speaker enclosure, Waters rejection notch unit, as well as the original manual. I will also include an E-V 729 mic. that is wired to work with the KWM-2. The equipment is in excellent cosmetic and electrical condition. The power supply has new electrolytic caps installed. All the knobs, paint etc. are original. The manual does have a coffee stain on a couple of pages, but that's the only negative I can find. Price is $700 plus shipping. I will box this in 3 boxes. Thanks, 73 Gary

Mike: It's not a bad radio, all in all. The best mod I did on mine was to put a small reed relay and a very small pot (I think it was about 5 K) in series with the Calibration pot. The relay shorts out the 5K when you switch sidebands, changing the calibration by 3 kHz so that you don't need to recalibrate. The pot and relay fit neatly in the chassis under the calib pot.

Finding replacement read-out LED chips is hard, since they're not made anymore. I found a small supply at Newark Electronics, but only for the chips that read the kilohertz (the 4 right-most numbers). I can't find the MHz chips, which are a different kind, anywhere.

It drifts a bit, other than that it still makes full power, and has a great speech processor.

A what to work on on?

I've worked on many HT220s, couldn't be easier to work on, clean straight forward circuits, exceptional performance. These old crystal controlled radios make a mockery of "modern" synthesized radios. A HT220 with its 45 to 50 db signal to noise ratio really sounds good compare to todays synthesized radios with maybe 30 db S/N ratio.

Oh well, the price for progress..

1350. Low Audio reports on HTX-242

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-11 00:00:00 UTC
From: K5WLS@email.com
Message-ID: <8EB8A76C1K5WLSemailcom@192.168.44.2>
Source record: 88895

I have the Radio Shack HTX-242 mobile rig and have received several reports of low audio.

At the ham club meeting last night I met a new member and found through conversation that he uses the 242. After the meeting I heard him on the repeater and noticed that his audio was low, compared to the rest of the gang. Not being able to listen to my own signal, I asked others if our signals were comparable, and was told that they are.

I found that you really need to love your microphone with the 242; you almost need it touching your lips. That brings the volume up (along with the possibility of p-p-pops and a little distortion), but the frequency response is still limited. The 242 doesn't seem to have the upper mid and high frequencies, and it really shows up in a round robin on the repeater.

Has anyone else experienced this and found a solution for it? Is a better mic cartridge available that would solder right into place? Or is there an adjustment that will do the trick?

Thanks in advance for any ideas.

Rick Matthews

I have an RCI-2950 for sale, about 1 year old. Freq mod (26.0-29.6) only.
Has been mobile since purchased, so it has a few small scratches on the top,
otherwise looks fine, guaranteed to work when shipped. Comes with bracket,
manual, and box.

$250 obo - C.O.D. only.
Partical trade for DirectTV or Dish Network systems and $$$ considered..

Chuck

Gee Mike can you write a paragraph without an insult..?? If I wanted to insult you I would email you direct. The restructuring affects me very little. Funny thing here is I agree with you that hams brought this on themselves. Although I don't believe I do...if I had an selfish elitism attitude, or if I was a self inflated bozo, or self inflated bozo, I have the right as a free born American to be just that. But as I said before, I agree that hams brought this all on themselves..and I really don't give a hoot one way or the other. My operation is mostly cw and digital. All the upgraded hams won't bother me a bit. But one thing I will add is that I do feel sorry for the new upgraded ham in one sense. I'm sorry they will never experience the same ham radio I had the privilege of being a part of for 20 plus years. If you listen to the talk on 75m or 20m you hear many groups of hams that will not welcome the newly upgraded hams. Most of these groups have been on the same freq for decades..and they will resist any thing they consider an intrusion. By human nature..when these new people are shunned on the band they will resent it and lash out one way or the other. Some will be good operators and just find each other on another freq. Others will start a QRM war that will never come under control. Its not something that anyone wants...I just don't see how it can be avoided. If you think the code/nocode debate was bad...or the 3.950/14.313 barf/stumpjumpers/liberty net fighting was bad. It will look like childs play when this all comes to full bore. It makes me wonder if all this was meant to allow ham radio to finally cut its own throat.

If I insulted you personally with my lazy no-code statement Mike..I'm sorry. I'm not looking for enemies..I suggest you don't also. But what the hell ..at least we both sign our names to what we type...hi

I'm the guy who posted back in October asking about an antenna for a Heathkit HR-1680 that I wanted to use to practice receiving Morse code.

Everyone who replied suggested a wire antenna. It worked just fine.

And...I passed the 13wpm code test last night! All I have left are elements 3b (general) and 4a (advanced).

Thanks!

Jeff in Colorado

That was my experience with the sending test also. I took the tests in Philadelphia with jack hammers working on the sidewalk outside - worse than 20M QRM. For the sending test the examiner had a laminated file card with text on it - handed it to me and said start sending. After about a word and a half he said OK that's enough. However I am not sure I really agree with saying that means the sending test was de facto deleted - I think you can tell in a couple of words if the person is able to send.
I have also been on the other side of the test. I helped several high school age boys get novice licenses some years ago. My standard was if I cannot tell what you are sending - and I know what you are supposed to be sending - then you need some more practice.
John

Many people seem to think that 5wpm code will be the death of Amateur Radio. Seems to me that most folks who wanted in without code have done it already, and it hasn't trashed VHF and UHF too terribly. There will be a great rush to upgrade, but many of these folks have HF priveleges already.

Has my (*pre-VEC*) Extra been cheapened? No. Has your (*post-VEC*) Extra been cheapened? No. You've earned your priveleges. I've earned mine. I use the pre-and-post VEC to demonstrate that the last time that 'the FCC screwed Ham Radio' the hobby survived...and some may say prospered.

I won't talk about the "Incentive Licensing" fiasco. That really did screw Amateur Radio. You went to bed one night, and woke up the next day with 50% of your HF priveleges gone! We haven't lost anything here!

The only reason that the code exams exist at all is the (old) notion that we as hams needed to be able to intercommunicate with, and/or prevent interference to commercial stations.

Having been a budding commercial (shore station) Morse op in my younger days (read late 1970's), I got to take a wonderful FCC exam. 25wpm mixed groups, 5 minutes, perfect copy. No exceptions. No fill-in-the-blanks. No multiple guess. Just an RE with a tape reader(remember those ?). Then, I got to send. Same 25 wpm, no mistakes...he gave me a page from the Wall Street journal. I don't ever think I've seen so many numbers at one time!

Does this make me a 'better' ham? I doubt it!

The theory was ALL tubes. Heaven forfend that the lowly transistor ever be used onboard ship! (Realistically...the static charges around a ship at sea are incredible, and many PA's are still tube-type, satellite or not).

Does this make me a better ham? Hell no!

The purpose of the technical exams is to prevent us from electrocuting ourselves and our neighbors.

The purpose of the rules and regs exam is to prevent us from trashing the commercial and military frequencies.

Should the exams be 'toughened'? Yes, a little bit. We should be able to demonstrate enough knowledge to prove that we can operate a station without trashing each other. There should be some basics of the more esoteric modes of communications. This will now include CW, for better or worse.

Should the questions and answers be published? Emphatically, NO!

If the questions are published, the 'multiple choice' answers, and the detractors, should not be. This is not to act as a 'filter' to keep people out...quite the contrary...we need many more people populating 'our' bands. The theory doesn't have to be difficult, but it should PROVE that an individual can safely operate a station...and not PROVE that a person can memorize 'trivia'.

How many 'old timers' (yeah...right) 'BASH'ed' their way in?

For those of you who don't recognized the reference...Dick Bash published books in the early 80's that had the questions from the FCC exams. He depended on hams who took the tests to 'smuggle' the questions and answers out to him (not physically, but from memory). So don't let anyone tell you that it was never that way in the 'old days'!

It is up to us to determine how exams are arranged, through the VEC system.

It is up to us to welcome and teach the newcomers. It's a hobby, fer chrissake!

Ars longa, vitae brevis! (the Art is long, and life short!)

73 and keep those flames and letters coming!

Bill WA3RA (ex KS3Y)

BTW...about 50% of my operating is high-speed CW. QRM? What QRM?

>They might
>still keep voice on the upper portion of the bands, but soon you will hear PSK31
>and RTTY
>on 14.010

Well, of course PSK31 and RTTY could operate on 14.010 MHz *now*. The
only CW exclusive band segments now are 50.0-50.1 and 144.0-144.1 MHz.
That's been so for decades. The other set aside areas are only due to gentlemen's
agreements among amateurs. That's worked pretty well for decades, even back
when everyone on HF was a General and there were no artificial class distinctions.
If the anger level doesn't get fanned too high over restructuring, it can continue to
work well.

If CW usage declines sharply in the future, there are likely to be some
adjustments to the gentlemen's agreements dividing up the data portions
of our bands. It happened during the switch from AM to SSB. (SSB started
at the top of the voice segments and gradually worked downward as the
number of AM stations declined.) Something similar may happen with
CW, but the bottoms of the bands should remain a CW refuge for a long
time yet. There are too many existing incumbents for change to be very
rapid.

>Hey, why don't they get rid of RTTY too ? That is pretty obsolete.

RTTY is nearly as old as CW, but it shares an attribute with CW
in that it requires a very simple transmitter to send it (only a couple
of components different from a CW transmitter). So it is likely to retain
a following among amateurs who like to build simple transmitters.

Being FSK, it also has a SNR advantage over OOK (6 dB better at
the same baud using a soft demodulator/slicer). Of course RTTY
normally is used at a higher baud than most CW operation, so this
advantage is mostly just theoretical in current amateur practice
until the CW rates get up to 40-50 WPM. Then RTTY does start
to show its advantage.

RTTY encoding and decoding are also easily mechanized, so the
tedium of Morse wetware conditioning is eliminated for users of
this mode. That's bound to impact its popularity in coming years
with the relaxation of government mandated wetware conditioning

requirements.

But with VLSI DSP now cheap, the meaning of simple is changing
a bit. I/Q modulators and demodulators can now have a very low
parts count. This trend will only accelerate. So designs we might
now consider complex will come to be considered simple as we
move from designing with individual transistors to using VLSI
modular blocks as our components. Thus it is likely that some
of the better digital modulations, with their associated coding
gains, will gain greater popularity even among those who wish
to build "simple" equipment.

In any event, major changes won't occur overnight. It took over
a decade for SSB to supplant AM, and there is still some activity
by some amateurs running AM today, four decades later. It will
likely take a decade or more for any major decline is CW activity
to become apparent. Even in 2050 there will likely still be someone
using it on the ham bands, for nostalgia's sake if for no other reason.
Heck, we still occasionally hear stations using American Morse on
the bands, and that's been obsolete in radio for nearly a century.

Similar experience here, JJ, when at the age of 16 I braved the Dallas FCC office for my Class B exam. Only, I got sent out in the hall before I could ever get as far as the exam. I was shaking so badly that I could not even fill out the 610!

Finally got over the shakes - barely - and got on with the code test and the written. I can sure echo what you said about the FCC staff there being very patient and understanding. Remember, that was in 1946 just after WWII and the bands had come back, and there just weren't many kids coming in for exams in those days. Mostly vets who had been radio ops in the service.

1384. Alinco DR-140 discriminator connection

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-11 00:00:00 UTC
From: Dan Banks <scannergeek@hotmail.com>
Message-ID: <387C0824.6DB97210@hotmail.com>
Source record: 88929

After examining the schematic for my Alinco DR-140 (an inexpensive 2m mobile rig), I was pleased to find what appears to be a connection to the FM discriminator at pin 3 of the microphone jack (an RJ-45 connector on this radio). Couldn't find any postings about this in a DejaNews search, so I figured I put one up.

I also took a quick look at this pin on the O-scope and spectrum analyzer with both noise and an un-modulated carrier. Although it tapers down slightly as freq. increases, the output levels it seems to be relatively smooth through 15kHz.

If anyone would like to try mobile packet, this radio might be worth taking a look at.

Dan Banks

Bitch Bitch Bitch! Where were all you cry babies when the ARRL asked for petitions regarding the restructuring plan? Just how many expressed their feeling to the FCC? before the announcement! IMHO the ones that cry and whine the most did the LEAST to express how they feel about code or no-code where it would of mattered. It's to late so it's better to accept the changes and support the man and woman in this hobby of ours to upgrade. The actions and support that is shown today will greatly effect amateur radio in the future. And thats my 2cents worth.

Clean, winged 32S3 plus matching, winged 51J4 (is that the right number? I'm at the office) power supply. Both have freshly painted by K0BS cabinets. PS and its internal speaker are fine; TX lacks grid drive -- probably tube, but I don't have a tester. $525 double-boxed and shipped in CONUS.

1399. Single-Crystal QRP Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-11 00:00:00 UTC
From: lagniappe <lagniappe@my-deja.com>
Message-ID: <85ft27$f4p$1@nnrp1.deja.com>
Source record: 88954
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Looking for a kit, or fairly detailed plans, for a QRP
CW transceiver that uses the same crystal for both transmit
and receive. The scheme could be some sort of built-in
"pulling" capacitance to shift freq by a KHz or so on
synchronous receive, or some other design. Looking for
a very simple, small, low-power circuit.

thanks,

Martin

Yep:

If you are into Repeater Building, I have just what you might be looking for.

Yep:

Received a number of Motorola T1504 and T1502 Series UHF Duplexers in Excellent condition, complete with all Cable, Knobs, and supports. Designed for Rack Mounting, and will handle 100Watt + with ease. Will supply some extra RG142/BU Cable for optimum performance and isolation, along with all support documentation. Will also tune it to your Frequency.

This is a Band-Pass / Band Reject Series Duplexer, and will handle up to 250 Watts with 100db of isolation. All have been tested against Flash-Over which can be fatale to duplexers.....

Picture can be seen @

http://www2.4dcomm.com/metrotech/mduplexer.jpg

Asking $280.00+$20.00 for shipping and handling (4 cavity Models) or $175.00 for the 2 Cavity Models
==========

If size is a problem, and you desire something a bit Smaller, I have some TLD7407 Series Motorola 6 Cavity Band-Reject Duplexers, and will supply them with the same features as above. (Made for Motorola, by Celwave)

Picture can be seen @

http://www2.4dcomm.com/metrotech/celwave2.jpg

Perfect for those 25-50 Watt Repeaters, and you do not have to worry about lugging a huge Duplexer around for a 25 Watt Repeater.

Asking $195.00+$8.00 for shipping and handling

==========

I also have a number of Motorola "Band Pass" / Band Reject Cavities which was removed from a Combiner and are "Perfect" for those applications that require a single cavity.

Asking $65.00ea+ $8.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

After not using it for some time, I tried to turn on my DJ-160 handheld ... nothing. If I do a 'reset' ie turn on with the Func key held down, it comes on and works fine. I put some freq. in memory, turn it off and on and it works fine. If I leave it for a few hours, again the same problem with the same fix. Is there a memory battery inside? Is this likely to be the problem? Can I change it myself? Any help appreciated.

Have a few NOS military HS-16A Vietnam-era headsets. These are the Vietnam-era version of the famous WW II HS-16. They have the two cloth-covered adjustable steel head bands, with dual magnetic element (with plastic cap) and are 520 ohm impedance. They have blackplastic shell earpieces and a 54" brown cloth-covered cord with two nickel plated plugs. They are in original, unopened packages, which are in turn in individual, original boxes dated mid-1060's. They are in MINT condition cosmetically and electronically. $25 + $3.20 to ship USPS Prioity (firm, no trades). Tks es 73! Jan N0JR

Dunno, Jim, will you? My statement means that pre-April 15
extras will be forced to present their licenses to prove
that they are not 5wpm extras. Advanced hams will have
no such problem. :-)

That's right. Novice privileges varied over the years, but the code
speed was always 5 WPM. Originally it was a send and receive test,
but that went away when the FCC deleted the sending requirement
for all license classes.

Going to Advanced got *part* of the phone spectrum back, but not all
of it. You still had to pass the 20 WPM in order to get all of your phone
spectrum back. (If Extra only applied to access to the bottom 25 kHz
of certain bands, few people would have cared.) I did, grudgingly, take
the Advanced, though I considered it nonsensical to have a different
test for access to spectrum of essentially the same kind as I was
authorized to use as General, and which I *had* used as a General
for years previous. I did it for the very pragmatic reason that nets
in which I participated operated in what were now Advanced sections
of the bands. (The nets later moved to the General portion to get
participation back up, but I didn't know they were going to do that
at the time.)

>to get your hazing ticket punched.

It might have been easier, but it wouldn't have been right. I made a conscious decision not to give in to that particular sort of absurd hazing. I didn't agree with the idea of having different exams for access to essentially the same spectrum then, and I still don't, but I will sit the Extra written now, grudgingly, as I did the Advanced. The reason I'm doing it is not because I want to operate high speed CW at the bottom of the bands. I don't. I'm only doing it because we have obtained a partial victory over the absurdity of Incentive Licensing by getting the high speed Morse tests abolished, and it lets me go "Nyah Nyah" to certain Morse religionists. That might not be the purest of motives, but it is the truth.

-
The poster is referring to after April 15 when all classes will only
require 5 wpm. There will no longer be any advanced class license
issued, but those who currently hold an advanced class, can continue to
hold that license indefinitely.

That was my next step, the Conditional which gave the same privileges as the General. Later went to the FCC office and upgraded to Advanced and had to retake the 13 wpm code test as since the Conditional was administered by a General or higher class amateur instead of by an FCC examiner, you did not get credit for the code when upgrading.

And you used to have to have one minute of perfect copy out of five minutes of code sent. When I went in to the FCC office for my Advanced upgrade, the fellow next to me copied his 13 wpm OK, but when it came time to send back to the examiner, he was so nervous that he could not send, his hand just bounced up and down on the key. The examiner finally told him to step outside into the hall and relax a bit while he gave me my test. The fellow finally was able to pass, the examiner was very patient and understanding.

You weren't patient enough. Awhile later, Conditionals were
grandfathered to General with no additional testing required.

Arent you worried about them taking away the CW portion of the bands ? I am sure
it
will happen some day. It looks like the first steps have been taken to do this.
They might
still keep voice on the upper portion of the bands, but soon you will hear PSK31
and RTTY
on 14.010

Hey, why don't they get rid of RTTY too ? That is pretty obsolete.

My sending test, even the one I took before the FCC, consisted of about 10 characters; the sending tests was de facto deleted long before it was deleted. :-)

Very good comments Tom... I think there will be a large shift of hams to other bands...not the new inrush others think will happen. A lazy no-coder will still be where he is now...on the out side looking in. If I were a commercial interest wanting uhf-vhf freq allocations that are currently assigned to hams...I would directly and indirectly support the restructuring. The big push will be hams switching to working HF instead of the high bands that are under attack from outside forces. The end result will be fewer hams on the bands needing protecting...and the manufactures selling more gear. Its funny all the people who were sold down the river for money are the ones smiling as they float down stream.

I'll live and get over it.

Yes, but nobody will believe you after April 15 unless you present
you license. After you renew, nobody will believe you unless you
present your *old* license. OTOH, nobody has any reason to doubt that
I have an Advanced license. BTW, I've been licensed since 1951, 33
years prior to 1984, and am a member of the Old, Old Timers Club.

I think you're right TIM in the aspect of people doing the sudden
upgrade,
but to refer to all the techs as "lazy no-coder"s speaks volumes of
your personality.

I've said this before, and I'll say it again. HAMs brought all these
changes on themselves. Some people tried to warn about it, but
the problem was it wasn't an illness, it was a suicide, brougt on by
selfish elitism attitudes like this.

And you're just going to continue the downward spiral common to those
that fail to face reality, not even realizing that HAM radio is what you
make it for yourself, not want some self inflated bozo thinks is
important for everybody because it's important for him.

HAM radio will survive this change, but not by actions like this. It
will survive because there will be people out there who aren't so
insecure in their own abilities that that have to berate anything
different from their frame of reference. HAMs that will be the
elmers of tomorrow.

You know what you REALLY remind me of? CBers who declare
"THIS IS MY CHANNEL!!" Hope that label fits you, cause you
wear it well.

Mike

I have a crossband bi-directional VHF to UHF repeater for sale.

It is mounted to an Astron RS-12 power supply and uses a Maxtrac 300
as the UHF radio and a M216 as the VHF radio. Both radios are 25 watt.

The RICK is mounted above the two radios.

This setup was used for a remote base application and works great!! I
got out of the business it was used for so now it is gathering dust.

I can have it programmed to your frequencies if needed.

$ 800.00 OBO

Yeah that's the word, "muddle". That's what will be left
of ham radio when this "improvement" is done. A "muddle".
Only a fragile shell.

Uh, Dave. CW is allowed on ALL HF frequencies. It is the only mode
where this is true. There are just certain band segments that are
set aside for CW only.

In rec.radio.cb Dave Hall <nojunkmail_n3cvj@worldlynx.net> wrote:

: It's no different than the bogus network "certification", that
: Mickey-soft and Novell started for computer professionals. It's a piece
: of paper, that says that you know something. The difference is that MS
: and Novell are making big bucks off of everyone that studies and takes
: the test. But it's only worth something if you recognize the validity of
: the testing methodology.

Funny. I just received e-mail from MS today - offering their Certified
Network Engineer (or whatever it is) class. The cost is $8000, but they
pay me $10,000 when the class is completed.

: Maybe we just want to make sure that everyone who plies the ham
: frequencies has enough technical knowlege to keep them out of trouble,
: and enough responsibility and maturity, that they won't cause trouble.

The knowledge requirement went away as soon as they started publishing
the question pools. It then became a matter of memorization.

Nothing in the Amateur testing has ever guaranteed that the person would
be either mature or responsible - or that they wouldn't cause trouble.

: And it is still true that the value something has, to its owner, is
: directly proportional to how much effort one had to expend to get it. If
: you had to apply yourself for the better part of 3 or 4 months preparing
: for, and passing the test for a ham license, you will be less likely to
: abuse the privilege, than someone who just signed on the dotted line.
: That's human nature.

Maybe. Or maybe someone who had to work hard would ignore legal
requirements when he/she though it possible to get away with it,
as a "right" for having to work so hard.

I don't know why the old Extra holders are so upset about the new rules.
It does not degrade THEIR efforts, or lessen the value of their licenses.

Remember when you had to hold a license for 10-20 years (I forget how long)
before you were eligible to apply for an Extra Class license?

Personally, I feel that the publishing of the question pool is wrong, but
it is only my opinion. I believe a person should have practical knowledge,
not just a bunch of memorized information.

On the other hand, I have more respect for the recent no-code tech who
behaves himself on 2 meters, and maybe plays with packet radio a bit, than

I do for the notorious groups of troublemakers on 75 meters and elsewhere.

Brush up on your 10-codes Boys.

The CB-RL, Citizens Band-Relay League in Newington, CT, is
going to update their Operating Manual with a section on 10-codes
and CB Lingo so old Hams can understand what the new hams
are talking about. There's also going to be a section on how to
properly tune a transmitter for maximum over modulation & Splatter.

>if he just know the right people.

1st you say the VE system is corrupt then that perhaps most VE's are honorable...Which is it? VE's risk their own license every time they sign for someone else's.... I have yet to meet a VE (and I've known a hundred or more) who would risk their own Extra Class ticket to "hand out" a license. Using your logic of painting the entire VE sytem black because of a few improprieties, then perhaps all "Coded" hams are like those fella's on 14313kc, 3950kc.... I suppose you'd throw out a cart of apples cuz' you find one bad one!

>I no longer believe that the ARRL is promoting this hobby in a manner
>which will cause me to be proud to be a Ham.

Then renounce your membership.... then go see if you can find anyone else who's fighting for your interests.... K1MAN? ...73 Magazine? ...Gordon West? ...W5YI? ICOM? ...Yaesu? ...Kenwood?
...CQ???.....Whooooooooooooooooooooooo???

> I do believe, that in a
>very short period of time, Ham Radio will become a vast wasteland,
>where no one with any intelligence will wish to associate.

I believe we heard all this before, at the introduction of the No-Code Tech license. It has not come to pass. Tell me.... what exams did you take? ...Did your first license require a CW exam? Did you take one of the easier exams under the VE system (where you had access to all the answers), or one at the FCC field office??... Did you have to prove you could send good code as well as recieve it? ...Did you have to upgrade your Novice license in 1 year or lose it?

My point is... times change, licenses change, requirements change.... LIFE is change.............. adapt to life as it IS and WILL be or fade away like a dinosaur.

Amateur Restructuring, Liberal Democrats, and No-Coders.

The FCC's restructuring plan shouldn't be a surprise to
anyone. After all, it comes out of the Liberal Clinton
Administration. Conservative republicans are willing to work hard
for their rewards, but Liberal democrat No-Code CB whiners want
everything handed to them on a silver platter. The democrat
whiners want to get ham licenses as easy as they get their welfare
checks. And the Liberal FCC, part of the Liberal Clinton
Administration gave the Liberal No-Code CB whiners what they
wanted, and the rest of us got shafted. Liberal Democrats like
to steal treasures from the hard workers, and give to those who spend most
of their time waiting for another government hand-out. When liberals do
this, it makes them feel important & needed.

restructured Ham = Welfare Ham.

No. Surely by getting on air at 20 WPM plus, you do not need the
callsign and piece of paper as proof. Unless, of course, the callsign
and piece of paper is just a status thing.

Amateur Restructuring is not a simple, one-sided issue, although many would like to force the many different viewpoints into one small box.

Times are changing, and whether we like it or not, there are realities that have to be faced. Here are a few.

The "magic" of your voice (or code) traveling thousands of miles is basically gone. I'm old enough to remember well the first color televisions, trans-Alantic TV signals, etc. When I first experienced amateur radio (as an early teenager), it was beyond belief that you could actuall talk to someone long distance wireless. I was even awestruck at some cheap walkie-talkies I owned! Now, we communicate effortlessly worldwide via the internet, instantly.

Commercial interests want more bandspace, and amateur radio operators who are time-frozen in the past have a poor argument to occupy valuable spectrum space to discuss their gall bladder surgery, latest bowel movement, etc., simply because they grunted it out years ago to meet the requirments of 13 wpm, and so on. Amateur radio was intended from the start to focus on public service and to encourage growth (in electronic knowledge). It was never intended to be a static, backward-looking social club, remembering the "good ole days". The very nature of amateur radio points forward.

The technical aspects of amateur radio have changed incredibly. Twenty years ago, you could still work on your own car (plugs, oil change, tune-up). Check out the lastest cars, and tell me how much you understand. The people I first met in amateur radio built their own rigs (early 60's). Today, that same rig would splatter unacceptably all over the band. Then, most built their own. Today, probably 98% use quality, name brand, sophisticated rigs, with tight specs on both transmit and receive. It's a changing world.

YES, some things could get better. Getting rid of the corruption in the VE program would help. Riley Hollingsworth has been extremely good news for the hobby. But perhaps we should require computer aptitude tests as part of the hobby (to weed out the old farts). Maybe we should ban discussions of all personal health problems, not to mention useless nets, that accomplish little. Simply passing the CW and written test back then is not a lifelong license to sit back, and reap the "reqards" forever in careless, meaningless blabber. I have always been in favor of amateur radio operators having to provide "evidence" for their continued re-licensing, such as proof of public service, classes taught, projects involved with, etc, much as medical

professionals have continuing education to keep them sharp. One statement the FCC made in their R&O was that there was basically no correlation between those who learned CW, and those who were proper station operators, or were significantly involved in public service. I couldn't agree more. What right does a 30-40 year Ham veteran have to needlessly blab on, using maximum power (or more), with poor antenna matching, and generally abusing the spectrum. Yet, that person is exactly the same person who will argue themselves blue in the face about the need to keep the code, etc. They need a reality check.

There is plenty to compliment and plenty to criticize in amateur radio today. I compliment the FCC for having the guts and sense of REALITY to not only face the real facts of the day, but to do so in a way that doesn't necessarily favor any special group, including the ARRL. Hopefully the tests, method of testing, band usage, etc. of today's amateur service will improve, and retaining CW at previous rates was not solving the problem. Kudos to the FCC for being willing to move forward with guts rather than look backward with failing memory.

I'm in my 50's, and hopefulle young enough to still engage and enjoy the new realities and technologies that emerge each day. However, the "tomorrows" are owned by the young, and I hope I have enough sense and graciousness to know when to get out of the way. The FCC has taken an important first step. I hope during the year 2000 that they and the amateur community can find some good solutions to the problems we still face and better use of the privileges we enjoy.

AB7RS, you seem to be missing the fundamental point of the license exam. The license exam is not a final exam to proves skills or knowledge, it is an entance exam into the hobby of amateur radio.

You're not supposed to know everything when you pass that exam (for any license class). You learn about the various aspects of radio after getting the license.

And, with that goal in mind, the current license exam system is just fine - it does exactly what it was designed to do.

Hi, before you all scream go to computer room - i have tried!!!!

I need to find a product that will allow me to have puter and screen away (10ft) from each other without any cables and the picture quality needs to be the same?

Anyone know of this or can point me in the right way?

Many thanks in advance

Clive

Hallo William,
have a look at the german HAM supplier WIMO, email: info@wimo.com
www.wimo.com
There is a Quad Loop for window mount - dual band - 54 x 54 cm
Order # 14303 (~ US$ 30).
You will see a nice picture but a german description.

Everyone should get back to the real world.

The only thing to come out of all of this will be a sudden surge to "higher class tickets" (that won't really be the same techinal standards as higher class tickets from the past) and more phone band congestion.

There won't be any massive influx of new hams, and the hobby won't suddenly "turn around" and grow.

Testing never stopped the large majority of people from upgrading. It was only the people who lack memorization skills or enough motivation to spend a few hours a week memorizing the test who failed to upgrade.

The lowering of standards has never "pumped new life" into anything.

It'll make lazy people happy, and Kenwood will sell a few radios. Then in a few months it'll all die off and many people will start crowing "why don't we reduce requirements even more?".

If you doubt this, look at CB. CB fizzled desipite essentially being a "free band" with no enforcement and no license required. The only thing that was gained were manufacturers made money selling radios, and the low end of ten meters and proper users of frequencies in and around the 11 meter band were ruined in the process.

Vince,

Being a Republican with a strong Libertarian streak, I must ask, just what does Morse code have to do with radio? I mean, telegraphy(sp?) originated on wires are you using it to communicate these long diatribes?

I certainly hope you have done something to further the art of radio communication than manually operating a spst momentary switch and acting as a bio-modem.

Morse code can be fun, and I am personally pushing for my 13 WPM, maybe even 20, but it is for fun. Logically, it has zero to do with the theory, operating practice, or development of Amateur radio.

Please stop crossposting these posts to the sat group. I know not much goes on here, but this condescending saber rattling is NOT on subject.

Thanks

Christopher Cox
KC8FRJ

PS look at the bright side, this initially should have little impact on the A1 band allocations, and possible band crowding may spur more op.'s to use CW as a communication method.

When the nocode-Tech was introduced the amount of hams operators increased dramatically. Infact nocodes became the largest of the licensed groups.. and from that many nocodes became Generals needing to learn Morse code "WHY?" They wanted to be better than they were. Either for one of two reasons. "the bragging rights" or "self worth". I see the same thing happening to the new requirements, and that will be the drive for most hams in the future to become a code ham. This will also increase the Ham population. In either way allot of Code sent today is by a Auto keyer or computer. Most of the Hams I know that are General or above don't even remember the code they needed to learn to get the license. They just wanted it to talk on things like 10 meters. So I look at it like this. In the long run this is going to create MORE hams to help fight off the communication giants of the world who wish to take our freq. for there gain. WE HAMS ARE STRONGER IN NUMBERS!

And that is what I was refering to. If CW usages declines appreciably,
the justification for special band segments for CW will diminish as
well.

Frank, no-nonsense comments that are pretty much on the mark.
Unfortunately, while those of us who already see the light, will agree
with you, those that refuse to accept another perspective, will argue
their dogma until the ground reclaims them. What's that about teaching
an old dog new tricks?

Like the old saying, "try to tell a nut that he's nuts, and he'll swear
that you're crazy".

Then why to people go to college to get a degree? That "piece of paper",
like a ham license, is a symbol of what you've endured in order to EARN
the privilege of being what you are.

I know sveral "computer whiz" guys, that are 100% self taught. They
attack thier hobby, with intense enthusiasm, and are probably as smart,
if not smarter, than "book taught" college guys. But you know what? when
it comes to finding a high level computer job, they have it tough
because they lack the PROOF (the piece of paper) that says that they
really know what they are doing.

> I'm too old-fashioned, eh?

You cannot ascertain, with any certainty, the level of qualification a person has, through a simple personal interview. Remember, you might LIKE the person, but the fact that he shot a 65 on the last 18 holes, drives the same kind of car, and has a hot looking girlfriend, mean nothing as far as far as job qualification goes. Any documentation, licenses, degrees, etc, that someone has is a testament, to their skill level. A ham radio license used to be highly regarded in that vein. Today, that is not as true.

>
> > And it is still true that the value something has, to its owner, is

The "piece of paper" is only a symbol. It's what it stands for that's important. A ham radio license is only the starting point. Hopefully, a person will learn more after being licensed. But for many, the achievement of the license, is acknowlegement that they've reached a milestone in their goals. Life is but a series of goals. Why diminish the value of someone's goals?

> should be nominal.

The license is basically a permit, but it is also the permit to operate some potentially dangerous equipment. Equipment that can cause harm in some cases, and interference in others, if not operated properly. By passing the "permit" exam, you are basically providing proof that you know enough (in theory) to stay out of trouble. If for no other reason, that is what makes licensing necessary.

Why do we license drivers (Other than the cynical answer "to fund the governement via fees")? Would you feel safe on the road, if you were aware that people did not have to pass some minimum skill and safety testing before being allowed out there with you?

> You should evaluate an individual ham by his/her actions, not by his/her license.

True. But that still does not diminish the value of the license as a certification.

> Besides, one doesn't really need to be a "tech whiz" to be on air.

Ask any CBer and he'll agree with you. But is that what we want for ham radio?

> But for those that are "tech whiz's", well congratulations. If "tech whiz's"
> are looking for paper recognition (which is silly in my view), then perhaps a
> note or something could be attached to his/her license -- however, there is no
> need for assigning radio permissions based on this.

There certainly IS. I'm sorry, but you can't tell me that a person should be given the responsibility to run a 1.5 KW station, with variable frequency control, with the potential to cause harmful interference, harmful radiation, and the potential for self injury if used improperly, without some form of testing first? That's insane! The more you know (and can demonstrate) the more privileges you should have.

If you just want to yack with your "bro's", then use the internet,
phone, or stick with low power radio services. That way you can't hurt
yourself or anyone else.

It's an analogy. You drew the wrong parallel. This has nothing to do
with who's getting paid for what. It's about the recognition of
certification, and the value that it projects.

No arguement there. But the line between "required" and "desirable" can be subjective. What's required to you, may not be for another person. That's why we have the FCC, who hopefully has the foresight to make that decision in an unbiased manner.

Dave

I didn't say that the current testing was perfect. I agree that you
should be required to LEARN the materrial, rather than simply memorizing
Q&A's.

> Nothing in the Amateur testing has ever guaranteed that the person would
> be either mature or responsible - or that they wouldn't cause trouble.

Nothing in the driver's license exam guarantees that either. But
hopefully, it DOES show that they've achieved the very basic minimums,
and hope that the person has some common sense as well.

That is certainly one distroted way that some people view life. Some
people think that they have more "rights" than they are entitled to.
This sort of "spoiled thinking" is based on, IMHO, having never been
taught the meaning of the word "NO" as a child.

>

Also agree! Many old timers put down the no-coders, under the
mis-informed, preconceived, sterotypical, notion, that no-coders are
nothing more than CBers. I don't think they will even get it through
their thick skulls, that there are some really talented communications
guru's in the making on VHF/UHF thanks to the no-code license. THEY will
be the ones that finally bring ham radio into the digital age, not the
old time CW ops, still passing traffic (and wind) the old fashioned way.
In the time it takes them to copy one piece of traffic, a modern digital
network can send a hundred times that amount across the entire globe and
back.

Well, look at the bright side, Dick. The advanced class ticket
will become the *PREMIER* ticket in ham radio because it required
13wpm code, not a measly 5wpm like an extra ticket. :-)

It's no use. Some of the PCTA folk are still complaining about the
existence of the nocode tech license.

Feels absolutely great, Brian. The Advanced license will
become the premier class in the ARS. The 13wpm Advanced
will be much more highly valued than the 5wpm Extra. :-)

what country were you in that had no code test requirements? Back in the old days you had to have 13 send and receive just for a novice ticket In the U.S. that was only good for a year and you had to upgrade or lose it.

I am now done with this thread.

Nope, I got one of the first Novice tickets. The code requirement was 5wpm.
To the best of my knowledge, the Novice license has always required 5wpm.

Paul,

On the Icom 2100H the instructions for memory reset are:
While pushing [SET}(far left switch)+[S.MW], turn power ON.
"CLEAR" appears and the transceiver is reset.

Good luck, TR

>Welcome to ham radio-set your watch back 40 years

Your main web page includes a link labeled "The Future Of Ham Radio"
which, when clicked, leads to a page titled "Code Forever" - if the
statement about setting your watch back 40 years is true, guys like
you are a major reason why.

>Please visit my World Wide Web Site, you have never seen a page like it.

I did visit. I have never seen a page like it. I hope to never see one
like it again:

>4. How you know you are a ham.

Sample items from the above: When you find yourself mentally
undressing your rig....when you'd rather turn on your rig than turn on
your wife.

Also shows a cartoon with a woman in bed with a man on one side of her
and a pig on the other, the woman is saying "I'm surrounded by hams!"

>7. The writings of me and others on ham radio, hear a typical ham contact.

The writings of K1OIK on ham radio consists of a scan of a page from
Radio World Magazine on which the magazine printed a letter in which
K1OIK disparaged ham radio by making such statements as this:

"Hams are required to serve the public, but in fact they are serving
themselves. Worse, they cause interference to other services (like
your TV) and they erect large towers and guess what, there is nothing
you can do about it."

The brilliant K1OIK also asserts, "Cell phones have replaced the need
for most emergency ham communications in this country."

>12. See now the future of ham radio.

Hopefully it won't include too many hams of your ilk.

Your statement "Anyone whose license permits the use of CW...." is very misleading. All licences permit the use of Morse code. The Morse code test is not about whether the operator is allowed to use Morse code or not, but whether the operator is allowed to use bands below 30Mhz. Passing a Morse code test is not necessary for an operator to legally use Morse code on the appropriate Amateur bands.

Ironic isn't it?

Encryption is the only relief and guess what - we already have it. It's called CW and even if they give out free ham tickets tomorrow you'll know the guy you're working in the CW band has paid his dues. Lookout phone only guys, without a 500hz filter your just so much "lid bait" with these new rules. ;-)

Although there will be no more Advanced class licenses issued after
April 15, those who hold Advanced class licenses will continue to do so
indefinitely if I understand the R&O correctly. I would assume that if
you do a callsign search it will continue to show an Advanced class as
just that, which would tell you that they passed the 13 WPM.

1500. Complete Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-12 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <387CCA0C.E63AD984@lakefield.net>
Source record: 88748
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

The telewave duplexers new price for the TPRD-1556 is $1572.00 as
listed on internet site.
The Scom 7k with voice, phone, and prg lists new about $ 850.00 as
listed on internet site.
The Micor comes converted for 2m, with full manuals,
and motorola power supply, in cabinet, is worth. $1500.00

The total replacement cost would be $3922.00
depending on what you can
get a converted Micor base, or repeater for.

I am asking a fair price.

Please, serious inquiries only, buyer pays shipping,
and insurance.

Hello all. I'm looking for a circuit to build a synthesizer to replace the tx/rx channel elements of a Motorola Mitrek. Somethng that could be set to different freqs by DIP switch or similar control. I understand someone made one in the past.

Thanks
Greg/N5SKE

As long as I can still eat in the same restaraunts, drink from the same fountains, participate in the voting process, and pee in the same (gender appropriate) restrooms, ya can do anything you want on the HF bands. Might I suggest, though, that the HF bands are not only "ours" (meaning the United States'). There will be many, many people in foreign lands listening to your tyrades, with a very highly raised eyebrow.

Bill, nice post. This is a healthy debate and while we all may
disagree, I think it's been an educational discussion to capture
all the elements, opinions,and viewpoints.

You hit the nail on the head regarding "Bash"ing into the
hobby. I remember those yellow and black "cliffs notes" looking books
with the cloaked vampire on the front advertised in the "Ham Radio"
magazine in the late 1970's. Now this has become mainstream practice
that our national organization, the ARRL, condones and promotes.

I am skeptical that the VEC will change the question pool -- they are
a not-for-profit organization on a tight budget and tighter timeline to
get a pool put together for the new exams by 4/15/2000.
I do not think there will be material changes to the existing question
pool, nor do I think we will migrate away from the publication of the
pool answers.

The one thing about elements 1A, 1B, and 1C is that it is difficult
to "cheat" (using the word loosely, since "Bash"ing is not technically
cheating, though memorizing the answers does defeat the purpose of the
exam to a large extent). The question pool for the CW element is not
published --- is that why folks complain that it is so difficult to
pass? There
are no "short cuts" to learning the code, except perhaps writing the
individual dots and dashes on the paper and then translating them after
the exam finishes (and most VE's will disallow that practice,
fortunately)

After reading all the debate, and stirring the pot to some degree
myself,
I am left with self-resolution on this conflict --It is not WHAT is
being tested, so much as "how" it is being tested. I'd be cool with a
difficult technical and operating skills exam replacing the CW element.
With no questions published in advance, where people have to learn not
only electronics theory and rules and regs, but also GOOD OPERATING
skill. The thing that makes the hobby so great is that folks value
their HF-priveleged
licenses because they take REAL WORK to accomplish learning morse. I
do
not see the same "respect for the service" with the no-code tech exam
that
I see for the Novice, General, Advanced, and Extra. The no code tech
is
more like a drivers license exam -- read a book for a couple hours,

memorize the answers, take a test, and you are licenced. Very
different
from taking 8 to 12 weeks to master the morse code at 5WPM and many more
hours to increase speed to 20+ WPM. Lots more investment.

Now, with the ability to memorize answers, and the ease of mastering 5
WPM
cw, the self-satisfaction, feeling of accomplishment, and time invested
in
learning within the hobby is diminished to a large degree. The
result, I contend, is less respect of the accomplishment, less respect
for the amateur radio service, less respect for the license.

Death of ham radio? No. Change? yes. For the better or worse?
time will tell.

Sounds like some people are doing some useless babble!
The restructuring doesnt make it easier for people to become hams!!!
You still have to pass your no-code exam and then pass 5wpm to
upgrade!! Whats the big deal??? Clinton administration didnt do
anything for me except give me a JOB and the ability to further my
education!! When has a republican did that for you? I can agree that
ALL POLITICIANS SUCK!!!!, but think before you speak!!

I hear all stating that tax cuts for the rich cause more circulation
of us funds... Yes it does, Right into another rich persons hands...
Therefore nothing is gained!!! 0=0

Who do you think forced SDMV to cut there reg fee's? Wasn't a
republican!!!

Start Giving to the people that make the world and not to those who
rule the world!!

1508. HTX-10 Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-12 00:00:00 UTC
From: Bob Raymond <braymond@iea.com>
Message-ID: <WW4f4.4231$V2.46480@sea-read.news.verio.net>
Source record: 88756

I recently bought a Radio Shack HTX-10 for mobile use. I was led
to believe that this unit would function on the 10 meter FM repeaters.
I found that the offset is adjustable from 0-990 Khz. Since the FM
repeater offset on 10 meters is 1 MegaHertz, it kind of makes this
unit unusable on the 10 meter repeaters.

Anyone have any information about this obvious goof on their part?
Thanks

Bob, KG7WC

Let nature take its course! If CW falls off the earth, then the only one to blame is yourself (not you in peticular)!! Religious CW operators that keep complaining about the new fcc restructuring and whining they may lose there band segments can only blame themselves due to the fact that they always put down the No-Coder instead of helping to teach the interested No-Coder! I am a No-Coder at present and when I hear hams complaining as such, I think why even try if this is how it is going to be on CW? I am going to get passed the code requirement and work on it to improve my speed, but I will never put down a No-Code Tech or anyone else that is interested in the same hobby as myself!! I encourage anyone to become a ham regardless if they were or still on the CB radio due to the fact that a CB Operator has more knowledge of basic radio operations than someone who hasnt operated a transceiver at all!!! I even hear others on usenet and on the ham bands worrying that HAM Radio will come another CB band, This is a bunch of bull too... When I lived in the San Jose, CA., There was 3 or more repeaters and several Frequencies in the HF Bands that sounded worse than CB Radio and 95% of the operators on these frequencies were Generals and above! So dont go flaming the No-Coders when your current problem with the General, Advanced and Extra class needs work!!!

Hi,
I am a collector of Collins and Drake equipment. I have over 300 pieces at present and are still needing more,
I am in England , however I transfer money world-wide and also arrange collection.
It does not matter if the sets are working or not.
I prefer MINT and UNMARKED line-ups.
I also collect JRC and anything else that is interesting.
If you have something for sale please e mail me at sales@multicomm2000.com
I can also arrange to transfer money in to a credit card account if required.
All I ask of you is to make sure that the units are cartoned up for safe transit.
Please e mail me with any equipment you have
Thank you
Martyn

Sure, that's correct. I believe the topic was how to tell the
difference between a legacy Extra (with 20WPM credit) and new
Extras (with 5WPM credit).

People in this newgroup have been claiming that conditional class
licenses were less credable than a general class in the 1960's.
The only difference between a conditional class and general class
was that the general class was taken before an fcc examiner.
Many of these posts are suggesting that somehow a conditional class
license was less valid than a general class. Most people like myself
who lived in that time know better.

Sounds like a misunderstanding on your part, Bob. Repeater offset
on 10 meters is 100 KHz, and always has been. The HTX-10 will work
just fine for 10 meter FM repeater operation (unless the repeater
you intend to use has PL, as the HTX-10 does not have a tone encoder).

It was the same test and code (13wpm) as the General, the only
difference is that is was administered by another Ham who held a General
class or higher license. The test was mailed to the Ham who would be
giving the exam. The examiner verified and signed the form that you
passed the 13 wpm code test, then you took the written exam. The
examiner mailed it back to the FCC who graded it. Then the long wait
began.

>
Martin

The SP-1B has two crystal sockets, but this is to provide you with two transmit frequencies (on the same band). You don't have to install both crystals. There is a DPDT switch to select one or the other. The receive tuning is actually RIT and is achieved by a pot connected (through some other components) to the crystal, so I suspect that it is some sort of 'pulling'.

Hmm! Even though memorizing the answer and CW is mostly what this post pertains to is not the problem!! If you memorize the answer then you get the question right, You have learned something regardless of what others say! In other words you might say that "0 being the answer to Question #44" is a memorized answer! However since the exams are not in a peticular order, there is no way to memorize an answer to a question unless you studied the book and sample questions! Which in turn means if someone passed the test then they so deserve to posses a license!

If you wish to protect CW, Quit bashing the No-Coders and teach a few!! That is the way to protect the CW portions of the band and to preserve the tradition! Explain to them why CW is important to you and why you enjoy CW so much! Dont point out its relevance or why its the best thing in communications, cuz everyone knows CW is not the best or fastest type of communication anymore!!! Encourage young and old users alike to pursue CW, but dont push it on those who have no interest!

I have interest in CW and upgrading to a higher class of license but I will not be the first to post a UseNet message Bitching and complaining about the possible loss of CW! If CW was lost, I would still be enthused by the means of communication to continue pursuing it and using it! It is not illegal to operate CW in non alotted CW portions of the bands.

Believe me, There are plenty of CB operators that would like to operate on those frequencies and if you dont encourage CW or stop bitching about CW, you will find more bootleggers on the band and blame the No-Coders for your own mistakes!

No-Coders are hams too, and by bashing a No-Coder you are Isolating yourselves to the point of extinction and will find yourself all alone!

I am curious to know if you can use a PalmPilot for Packet instead of a computer. If so, where can I get some more information about this?

Also, places to get information about using the PalmPilot for APRS.

Thank You

I would love to hear a CB'er who really knew how to use the 10-codes.
The code 10-20 means "What's your location?" Can't tell how many
times I've heard "What's your twenty?" It's like saying "What's your
what's your location?"

Totally irrelevant.....a ham radio license is of no commercial use.
This is *Amateur* radio, not commercial/professional/broadcast/PCS
whatever.

The license is NOT a graduation certificate, but rather an entrance
permit to the hobby/service. What one chooses to learn after that is up
to them.

Get a copy of the December 1999 issue of CQ VHF magazine (it's the last issue that will be published - they merged it into the regular CQ magazine, effective with the January issue).

There's an article on interfacing the Palm series with a TNC and HT for really mobile packet! There's also some APRS info.

I bought a Kenwood 2000 SWR / PWR meters unit back in the 1900's and never used it. The instruction sheet is lost and I would like to get a Xerox copy of one or even typed in a email if possible.

Several combinations of switch positions are possible (???) There is a lead that has IN / OUT for coax connections. It attaches to the meter box. (Help) TNX

Don was the lead design engineer and force behind SBE.

It was built just as well, with the same things in mind... Some of the SBE amateur equipment is still unrivaled... On par with the Collins for performance, but I wouldn't say that for durability!

1547. Swan 6m SSB rig

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-12 00:00:00 UTC
From: Erik Iddings <erikwi@northstate.net>
Message-ID: <85j73f$jc7$1@news3.infoave.net>
Source record: 88795

I need some help. I just had a Swan 250-c 6m SSB rig given to me by one of my elmers. I know absolutely nothing about these good old fashioned tube-style rigs. I grew up in the age of transistors which are OK, but don't have the high power output of tubes, at least running barefoot anyway. I've got a manual that explains how to tune it up, but I need to know how to cut the power back, how to safely operate this rig without burning it up, etc...

Any information will be greatly appreciated.

Ever ordered Shrimp Scampi or said "Shrimp Scampi"?
Then you've said shrimp shrimp. "scampi" is "shrimp"
in Italian.

Bravo, Cecil. You speak the truth. As an extra class 20 WPM ham who
enjoys CW, I decided to do my share elmering / being a VE. So,
I teach a cw practice session via repeater twice a week for 30 minutes
per session. It's amazing how many no-coders expressed interest in
"finally learning the code" but when they found out you cant "cheat"
and have to really learn CW (not just memorize published
test pool answers) they gave up and bailed out.Those few who stuck with
it upgraded to novice / tech plus....even had one
go to general.....all for an hour a week for ten weeks. Amazing.

Rote memorization is not on the same level as learning a fundamental concept thoroughly. Yes, there is some retention by rote, even enough to be useful (subjects like band and power limits come to mind), but knowing the answer to a question that asks which HF band to use when the MUF is a given frequency is not nearly as useful as learning the fundamentals of HF propagation as concepts, and as importantly learning and understanding how the various factors (solar activity, MUF, critical angle, antenna polarization and radiation angle, scatter modes, etc.) affect one another and combine to produce a certain type and quality of propagation.

I think the FCC would be doing operators a *favor* by closing the question pools, since people would have to study concepts and *understand* the theory well to pass the tests. The same folks would be happier later, ticket in hand, when the time came to actually set up and operate a station, and the learning curve of new hams would not be as steep as it is (listen to many of the questions asked on repeaters about basics, that in fact were on the exam the poser just recently took and passed, and you see this in action).

I have a pretty sponge like memory and remember the *wording* of many questions from the ARS exams [and others] I have taken, but I am very glad that I approached preparing for ham exams by using the ARRL guides, which I have hung onto because they are actually useful reference, because they treat their subject matter in thorough detail, and as a whole, instead of simply presenting the test questions with the correct answer highlighted and with only minimal explanation.

That is the difference between a textbook and a test guide. I have learned well the basics of propagation, antennas, safety, proper and effective operation, and AC/DC circuits from the ARRL guides (and books like them, such as George Grammer's "Understanding Amateur Radio"). Such reading prepared me first for the tests, then to set up and operate a station, and finally laid the foundation for further learning, understanding, and development in my hobby.

The Q&A style books certainly don't do the latter. If you use them you will wind up doubling your effort/reading later, since they do a poor job of really teaching principles. Even if the Q-pools don't get closed, whenever I can I urge that people avoid the Q&A type guides because you don't learn much from them that you can form generalizations from and then apply in particular cases.

We spend a lot of time debating license exams in terms of fairness, relevance, and their function as a filter. We ought to look at them, and change them as needed, more from the point of view on how well or poorly they prepare people to actually operate a ham station day-to-day, after the license has been granted.

1555. Power Connectors

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-12 00:00:00 UTC
From: Ken Mirabella <kjm@flo-bin.com>
Message-ID: <jraf4.146$ze4.21005@typhoon-la.pbi.net>
Source record: 88803

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH

Need a tone decoder board for Knwd TM-241 radio. I believe it's a TU/8 or
something similar to that? Any help appreciated on proper ID of board and
finding one.
thanks and pse email direct.
Randy

>Make it easier so we have more, don't care about quality, just
>quantity. Sell more radios, perhaps? No doubt, the Big 3
>manufacturers are happy with this philosophy.
>Anything you get for nothing has no value. Think about it and you
>will know this is true. Anything requiring effort and truly earned,
>will be honored, respected, and nurtured. Why do we implement policy

Why do you say that? It simply is not true in many perjaps
most cases. I and most people I know value things based on their
uslefulness, and/or usefullness vs how hard it was to get. In other
words on some type of value.

>that will degrade the value of a license? Why not, just once, make it

Indeed these changes be they right or worng in conception do
INCREASE the real value of the lisence if perhaps not to yourself then
at least to many people. The near total failure of the CW side to even
seriously consdier this line of thought, is certainly a reason that
that side of the debate has not been able to muster any arguement to
really sway the people that count in this matter. The FCC

>something difficult, something earned, something valueable?

The value of the license is in what it allows one to do. In
those terms all licenses have and are and must continue to increase in
value, when any of the following happen, technology improves, numbers
increase or spectrum is enlarged. If you don't understand that value
of the license is in what you can do on the air then aren't you really
missing point of having a license?

As to earned or difficultity these seem to me be out of
place. Diffculity, the Government is NOT in the bussness of dealing
out S&M as the Dominant partner, (it manages this at times but that is
not one hopes the purpose of Governance. Earned, why should I earn
the right to use what should never have been so restrictied?
>I no longer believe that the ARRL is promoting this hobby in a manner

Alas here I agree with you. I can see where bythe ARRL is
doing much of anything to promote this hobby, at all, and without
regard to the manner in which they do so

>which will cause me to be proud to be a Ham. I do believe, that in a

I don't THINK you can do the freeband mod on the recent units...the
standard MARS/CAP mod does work, but gives less coverage.
I've heard rumors of a different mod, but I suspect that it's vapor.
If you actually DO find a way to get freeband-like coverage, let me know
please....I've been asked about the newer '50's often, and I'd love to
have a answer for them.
The above never affected me personally, as my unit started with 6M.

After a long night on-line discussing begging strategies most likely to win
table scraps, tips on actually *catching* that damn squirrel next time,
sending jpegs of each other's rear ends, and shamelessly flirting with the
other doggies (all claiming to be 2 years younger and 20 pounds lighter than
actual), my dog just hasn't the time left to study Morse code. I think
she's still smug about the fact that she spells better than I do. And
typing on
a standard keyboard with such big mitts is no small feat. ;)

Perhaps they could wave the code requirement for dogs.
But then, how would they communicate over the air?
Special "barking only" repeaters?

She just typed "RTTY! RTTY! RTTY!" on the next computer.
What's that?
:-)

A wonderfully well-thought out and reasonable response.
Thank you! I share your optimism that things will work out
all right.

I also agree with a number of points AB7RS made, especially
about the tests being too easy. As I read it, it will now be up to
the amateur community to determine the contents of the
question pools, and we should really concentrate on making
sure that the questions chosen represent a proper cross-section
of knowledge at an appropriate level of difficulty. And certainly vigilance
against dishonest VEs is a good idea.

Perhaps ARRL could take up the slack in high-speed Morse
and have special awards for (say) 100 QSOs at (13, 15, 20,
whatever WPM). That would have to be worth just as much
as an FCC document, and probably would look better on
the wall, too. :)

I took my conditional class license in 1962. There was a ham radio
class and the Wichita Amateur Radio Club offered the conditional
class exam with them. They were as concerned with integrity as the
FCC was, and considering the nearest FCC office then was Kansas City,
I took it with the radio club. They sent 5 minutes of ramdom code and
we had to get one minute perfect.
In 1969, I took my First Commercial with the FCC in Spokane. I think
that the conditional was equal to the General. There is no magic
taking an exam infront of the FCC.

Tom W8JI wrote:

>
> You didn't take away anything, but the FCC sure did!

No, they didn't. You earned whatever class license you
hold, and can lay claim to the set of skills you had to demonstrate to the FCC or VE when you were tested, regardless of what the FCC does now. That can never change. For that
matter, a ham license is not intended to be proof of some static set of skills that will forever remain the same. It's a permit to get on the air with specific privileges. The *only* way the FCC can change the value of your license is if they add or delete subbands from your current privileges. You're free to confuse

the effort you put into getting the license with the operating
privileges it grants you, but that's a classic case of mistaking
the map for the territory. So now it's easier for newcomers
to get your class of license, but that doesn't change what you
accomplished to get there.

And if it is so damn important to you
that people on the air know you're an "Original Extra" or whatever, to set you apart from the folks who only had to do 5WPM, fine. You'll sound like an elitist, but go ahead if it
will make you feel better. People will know what you mean
if you say you're an "old extra" or "original extra".

>
> It's typical for those who dislike working for something and who
> expect handouts to not understand why some people have pride in what
> they accomplished.
>

You can be proud of your accomplishments and also
accept without bitterness that the world has changed.
5 WPM does take work and study, and is surely not a "handout".
I know several people in their 20's and 30's struggling
to achieve their 5WPM, who would be very insulted by
your characterization of this as a "handout". Yes, it's easier,
perhaps much easier, but it's a lot more work than most lazy
people would ever put forth. 5 WPM will do a fine job of
keeping people looking for handouts off ham radio.

A lot of times I hear this "handout" crap, and I see a
survivor of a hazing ritual, known as "high speed code", resentful and angry
that others will have an easier time than you had. Hopefully this is not your
real motivation for being
so upset at the changes.

>

Politics, left, right, up, or down, has nothing to do with this.
All this talk of socialism, handouts, and such makes you sound
like some sort of a rightwing loon.

Thanks for the update. Although the URL you gave said it was up for sale.

A few thoughts...

If this radio was meant to compete with the 1000MP that costs about $2380 (Texas Towers) today, I would suspect that within 6 months or so you will see a drop in the street price of the 756 Pro. Also, this is a major redesign of this radio. You know there will be bugs in the design. Another reason to wait at least 6 months on this radio.

Hi Just so you know, if you want a award for code proficiency, The ARRL has offered one for many years. It's called the "code proficiency award. It's starts with the basic award at 10wpm with stickers for speed up to 40wpm. See www.arrl.org for more information.

Mark,

I looked at the SP-1B as you noted, but it appears to me that
this radio is not a single-crystal rig. The illustration shows
two crystals on the radio. The "spider junior" appears to be
a single crystal, but if you read the ad copy you see that it
only uses the crystal for transmit - receive is not crystal-
controlled. As I noted, I'm looking for a scheme that uses some
sort of offset or pulling to get the double-duty.

If I had waited, my Novice would have expired and it was not renewable.
It was several years later that they grandfathered the Contidionals to
General, by that time I had upgraded to Advanced.

I remember my first attempt at a contact the day my Novice license came in the mail. I was newly married and when I came home from work my wife handed me the envelope from the FCC. I opened it up and saw the license and rushed over to the rig which was a Heathkit DX-60 transmitter and Lafayette KT-200 receiver. I only had two crystals, both on the 40 meter Novice band. Remember, we had to be crystal controlled. I tuned up the rig, which was capable of 90 watts input, but carefully only loaded it to 75 watts, which was the input limit for Novice, spotted the receiver on one of the crystal frequencies. Rats, someone already on that frequency, tried the other frequency and it was clear. I nervously took the key in hand switched the receiver to stand by, switched the transmitter to transmit and banged out a slow three by three CQ, you know, CQ three times, call three times, repeat that three times. Switched from transmit to receive, listened a few seconds on my transmit frequency and then began tuning. Since Novices were "rock bound" the person who heard your CQ might not answer on your frequency as his crystals may be on another frequency, so you tuned around to catch someone calling you. Sure enough, out of the background came my call letters followed by theirs. Well, I was so shook up, just turned the rig off and got up. My wife asked me if I made a contact. I said "Naw, there's no one on the band." Hope the guy isn't still setting there waiting for my reply. Still have my Novice logbook and my first QSO was with KN5IMJ in San Angelo, Tx on 7.170 Mc. A lot has changed, some for the better, some not.

I don't recall anyone claiming there WAS any "magic: taking a license
before an FCC inspector - only that they tended to be somewhat
humorless... I *also* doubt any credible opinion on comparing the two
can be made from merely one person's experience with one of each...

SO what's your point?

Not that simple. Once you renew your license after the Epoch,
no one will be able to tell the difference from looking. I suppose
someone could come up with a clever callsign suffix to advertise
their legacy Extra status, like K6JQ/OF perhaps?

As for the grumbling about "Novxtra" and such - c'mon guys, show some
maturity. I expect this kind of "that's not fair!" bickering between
my youngest two children (ages 5 and 8), not from adults.

Hello to all...!

I can tell by reading a few posts that I'm asking a question for another NG... maybe someone hear can direct me to a more appropriate one for the question...

There are numerous small 2-way radios on the market, "walkie-talkie" style sets, marketed towards hunters, skiiers, hiking, etc. with ranges of "about 2 miles" in the open, and priced between $59 and $99. Some are by Motorola, Cobra, Kenwood, Sony, etc. Is there one particular unit that seems to perform best... or worst..???

Thanks for any info... I have found this newsgroup quite interesting. When I finally have time to unwrap my old 1940 Halicrafter (sp?) and fire it up, I'll deffinitely have some questions.

1617. Amateur Restructuring Announcement - CALL SIGNS !!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-12 00:00:00 UTC
From: n4dh@juno.COM
Message-ID: <20000112.124502.3438.0.n4dh@juno.com>
Source record: 88891

I too remember the FCC code exam. In 1962 I held a Novice class license, and had
upgraded to a Conditional class. In order to obtain the Advanced Class license,
I had to travel from Fayetteville, NC to Wilmington, NC. The FCC examiner first
gave the 13 WPM CW receiving exam. I passed with 65 correct consecutive
characters....sweat was rolling down my brow. Next was the sending exam.
I had really forgotten about that, but on arriving, I noticed most applicants brought
their own key...I had not. I borrowed a key when it became my time, and sent
over 3 minutes of code when the FCC examiner stopped me. I had omitted
a slash (/) mark from a callsign. I remember I skipped over it as I had a mental
block and could not remember the correct sequence of dots and dashes. The
examiner asked me if I did not know what a slash (/) was? I immediately sent
it correctly. It hit me all at once, that I had been using it in calling a MARS CW
net, which was AA4EWB/A. The on-the-air experience had helped quite abit
in actual sending. He smiled and presented me with the exam papers for
the General. Since I had a Conditional class I had to take the General over
to test for the Advanced. I passed both, but did not know it, until the license
arrived in the mail about a month later. Talk about change!!! I learned the
code from practicing on a machine called an Instruograph, which was rented
for a period of 1 to 3 months. Getting on the air with a Novice license really
helped in learning to receive and send the Morse code. The 15 meter novice
band allowed me to work lots of DX with only a Novice license....boy, was it
fun. Just thought I'd pass this little story along...I'm sure there are lots more
out there like this. The examiner's name was Russel Banks, an SK now.
Lots of hams on the East Coast were tested by him. He seemed like a
gruff person, but was really a nice guy. de Bill, N4DH, ex WN4VAF,
WA4VAF.

if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

Symptoms : first time : good receive but audible alarm " UNLOCK " with
morse code.

now : open display firs time (forexample
14.000.00)
after opened display (like . . . . .
. . .)
not receive also not any sound or h&#65533;ss
not transmit
alarm " UNLOCK " with morse code repeatly
.
when I rotate Tuning knob display is open
like 14.230.00 but
again ..... after 1 second .

I measured 3.2V on back-up lithium battery .

I have a New Ameritron "No-Tune" ALS-600 Amplifer I purchased in August 1999 from Burqhardt Amateur Supply in WaterTown South Dakota. It was purchased so I could run portable in an Apartment and run on 110volts, and I have no need for it now. Amplifer has both RF Deck and Power Supply, and also modification board for 10 meters. Manual and Invoices from purchase are packed in original cartons, no scratches... It is a 10!. Price is $750.00 plus shipping. Please respond to wd5bjq@bigfoot.com

Thanks
Keith

Are you using a switcher power supply? If so you are most likely
hearing the switching frequency.

It can't quite match your dream specs, but take a look at the Kachina 505DSP. I recently got one, and my Icom IC-765 now gathers dust. The Kachina is so far superior in every respect - except for lacking an impulse noise blanker, but one is coming - that it is laughable. The Kachina is a totally new and different architecture done to commercial standards for the amateur market. Its specs match or exceed all the top-tier conventional radios.

Go to

http://www.kachina-az.com

and listen to the Kachina net Wednesday nights at 0100Z on 14275 and Saturday mornings at 1630Z on 14275. No other radio can match the SSB voice quality of the Kachina.

Be glad to sked you if you want to hear mine.

Have my HD1410 manual.

There should be LOTS of volume from the keyer. Mine is too loud at minimum.

Also I have a simple mod that will make it key a 12 v positive keyed radio.
The original circuit will not get "low" enough for some radios.

ka9car@_nojunk_arrl.net

You should be able to figure out how to fix the above email address!

> had used that fact to build my resume.

The ham license has never been proof of electronics skill or knowledge, Dick. When you got the jobs you describe above, did you do so without any further training? In other words, did the radio/tv repair shop hire you without giving you any training after you were hired? Did the military hire you without any further training?

If they had to train you, then you cannot now claim that passing the ham license exam was evidence of electrical skill since those organizations did not take that license as proof of electrical skill. For those organizations, that license was only proof that you had some basic understanding of basic electronics and therefore would be easier to train than another person.

And the ham license of today still serves that purpose. However, it plays less of a role in the hiring process today simply because radio plays less of a role in an electronics career today. Years ago, because of the greater role radio played in an electronics career, many more organizations were willing to give credit for any radio training (no matter how basic). Since radio plays less of a role today, fewer organizations give that credit (even those who did years ago).

I also think you're being a little disingenuous here, Dick. After working at a radio/tv repair shop, graduating near the top of your electronics school class, and working in electronics in the military, I really doubt that the ham license really played that much of a role in your later employment at that "good technical job."

The simple fact, whether you want to admit it or not, is that the ham license exam has always been an extrance exam into the world of hobby radio (hobby radio, not professional or commercial radio). That is the way the FCC designed it many years ago, and that is also why there have always been other, much more difficult, license exams for professional or commercial radio personnel.

With that in mind, the existing license exam system serves its purpose well.

1646. Info wanted Yaesu ATAS-100?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-13 00:00:00 UTC
From: Ron Manfredi <wa2eio@mindspring.com>
Message-ID: <387E3B58.6EC7023C@mindspring.com>
Source record: 88660

Has anyone had any experience with the ATAS-100 antenna system that Yaesu has for the FT-100? Is the tuning mechanism rugged enough to withstand constant high speeds (wind) and ice loading? What kind of mounting hardware is needed? I have always used the Hustler system; reliable but limiting. (And I am sure I make the driver behing me nervous with the 75 meter coil swaying around back there!)
Now that I have the FT-100 I think I would like to take advantage of the automatic tuning and band switching that this antenna offers, along witht the lower profile. Has anyone anything to say about it (good or bad?) Thanks.

I understand it real well, In fact it's an 8wpm barrier but you may
have got stuck at 10wpm. Morse code does in fact have something to do
with radio, We dont send it over the phone do we? But I do agree with
most of the post in here that morse at present does not make ham radio
what it is today. Maybe 30 or more years ago, but not today. Good luck
getting passed the barrier and I hope I dont have that problem when I
get there which I know I will! :(

Wonder how old he was when he got his Novice license? What a terribly boring place ham radio would be without all the new kids on the air to teach proper operating procedures. Not to mention no development of new technologies by a coming-up younger generation.

Sorry, Cecil.....bit of clarification required for those out here
on the left coast. Class A operator is not "advanced" --
it is from the olden days,
when the only ops were class A, B, or C. before the days of fancy
terms like "novice, technician, general, advanced, extra"...
One of the original crumrudgeons....(SK)W2OY from "New Yowk" used to get
on and say this as his net preamble. Us midwest guys could always
count on W2OY to ensure our receivers were working. If you couldnt hear
W2OY, well...you needed new tubes for sure. He was always very load,
very
present on the air.

Class A ops were the only "real" hams in his mind.
Equivalent to today's extras and advances.

Just some trivia from the golden era of radio.

>disconnect relatively quickly if necessary.

I used to own a 1994 Ranger (they haven't changed much) and used my Outbacker Perth antenna on it. I have the heavy duty Outbacker mount. I drilled a 1/2" hole in the top of the rear bumper, behind the left tail light, installed the Outbacker mount there, and ran the coaxial cable along the truck's frame (anchored with zip-ties) and into the cab through a rubber plug in the firewall (which is also where I ran the DC power from the battery to the HF rig). Outbacker recommends not bumper-mounting their antennas, but I had no problems tuning it, and it worked quite well. I left the base section of the mount in place at all times, and unscrewed the big spring and the antenna if I needed to remove them.

I still use that antenna. I now own a '98 F-150 super cab with a diamond-plate aluminum toolbox behind the cab. I have the antenna mounted on a heavy aluminum L-bracket on the left rear corner of the toolbox, still using the big OUtbacker mount. I use it every day going to and from work with my Ten-Tec Scout, mainly on 20m.

Well, one can make an argument that some of them are indeed Class 'A'
operators (where the 'A' stands for 'A__hole'. :-)

1664. Re: Amateur Restructuring Announcement - FCC screws Ham Radio!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-13 00:00:00 UTC
From: Scott Alexander <salex@research.bell-labs.com>
Message-ID: <387E4812.DEBA864C@research.bell-labs.com>
Source record: 88678
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy

Just to give some context, I took elements 2 and 3A yesterday (1/12/00) and so have just joined the ranks of the Welfare Hams (or will once the FCC updates the database). My reason for getting the license was because I want to telecommand and receive telemetry from model rockets and the ham license seemed the easiest way to become clearly legal. I also have a PhD in CS which mostly shows that I'm persistent but also means that some professors have at least talked about technical material while I was sitting in the room.

That said, I was frightened by how little I learned preparing for the tests and how little use I expect that to have. The RF safety stuff probably was probably the most useful. If that hand't been on the test, I wouldn't have known to think about it and certainly wouldn't have known where to look for answers if I did give it a thought. I feel like I know where to find the information now.

As to band limits, I decided early on that I didn't want to memorize them and figured out that even if I got all the band limit questions wrong (as well as the questions about what was appropriate on what bands and even what power is allowed on what band), I'd still pass the tests. So I pretty much ignored that stuff. When designing the radio element for my rockets (or if I ever decide to use any other amateur privileges), I'll look up the information on bands, etc.

As to the texts, I picked up a text, somewhat on a whim at Radio Shack while I was looking for something else. I was appalled to find out that it had the list of questions with answers and brief explanations. I had expected much more general information to fit the pieces together. Moreover, I do not feel like I could go out today and choose the right rig for any given purpose (even though I do know that I need a variable frequency oscillator if I want a VFO-controlled transmitter and I know that phase modulation is quite similar to FM). I would guess that if I decided what band I wanted to be on, that Table NT-01 could be used to infer the correct choice of antenna, but otherwise I wouldn't know what choice to make. (I would know where to hook up the SWR meter, though.)

Ultimately, I guess I believe the most useful test would consist of being handed a box of parts and told to construct a transceiver and to make a successful contact with it. That would seem to cover the range of privileges granted by the license quite well. Failing that, it would seem that even with the pass-the-test type books, if passing the test required the applicant to make an on-air contact under the supervision and coaching of the VE, there would be a good opportunity to pass along some of the traditions and practices of amateur radio.

A final note: While my goal through all of this was telecommand and telemetry, my interest was piqued enough that I've started thinking about buying a rig and upgrading my (soon to be) license. Which would mean learning code (at least slowly). Suffice it to say that after a bad experience trying to learn code as a Boy Scout, learning code had been a bar to any interest I had in ham radio until the no-code license became available and even then, I had enough of a bad taste in my mouth that it took a different impetus to get me to get even that. So, even for those who want to preserve the traditions of amateur radio, you might consider how many are being kept away by the seeming insularity of some of the requirements at the same time you count the number of CBers who will be taking over the airwaves.

Nicholas,

In addition to shortening the radio's life -- and those repairs are expensive -- you will also increase signal distortion and harmonics. The first will earn you a bad name among other Amateur Radio operators. The second may increase your chances of causing harmful internference to other bands, other services or radio and TV listeners.

you could probably increase power output, as measured on a wattmteer, as much as fifty percent. However, because of increased distortion, your ability to communicate will not rise that much, if at all.

I own a 735. It is usually possible to run LOWER power, fifty watts, say, and know that you are that much further away from blowing the rig's finals.

Good luck!

Cortland

I just got a new Yaesu FT-100 and did the mod that I found in a few places on the net but it only opened up the HF bands. I would like to open up the vhf - uhf bands as well.

Does anyone know if there is a different mod for newer production models? Serial number starts with 9D, if that helps.
When I got my ft-50, the published mod didn't work because it was a newer model. But eventually someone got it to work.

By the way... I have been following all the threads about FT-100 vs. IC-706 with great interest. Thanks to all who posted. Very happy with the FT-100 so far!

Hi Tim,
Are your batteries fresh? The output power drops dramatically when the
battery power declines. Also the little tiny rubber antennas severely
limit how much power ca get out.

J.B.

Hey Ron,

Consider the folks at MH Electronics. I deal with Brian and he's VERY
knowledgable and VERY friendly. Always gets my order right the first time
and their prices are good. Goto www.mhelectronics.com

Whatever you do, avoid Jan Crystal like the plague. They don't even know
what the hell a Master II is. There's only 50million of them in service.

Dan / N7WPD

Lee, when you get on the air you will be judged by these things:

o your signal quality

o your cw fist or phone voice

o your operating style and skills

No one will know what test you took, what grade you made, how fast you copied code for your license, etc. You *are* your signal and how you sound and what you say.

You start with a clean slate and it is up to you to create the impression that others will form from hearing and talking to you. A clean signal at all times, a cw fist that is reasonably clear and easy to copy or a voice signal that is undistorted and pleasant to listen to, and calm efficient and (again) pleasant operating techniques will create the positive favorable image you seek.

Tune around the bands and see how quickly you can spot the stations that fit the description given above. And also see how quickly you can find those who do not.

You have a choice as to which group you will be identified with.

Make it wisely, and welcome to amateur radio.

Hi Carter,
By golly I knew someone had one of those valuable antiques. That
was the receiver we used in the KOKOMO Amateur Radio club in 1937
When first got my ticket. Those things were tremendously sensitive
to weak signals. Great for DX'ing. Forget which rig we were using
but think it was a GROSS CW 25 (had a pair of 46's in the final).

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

> >
> > Dave

> Totally irrelevant.....a ham radio license is of no commercial use.

It's a certainty that it will never again be, but it has
not always been so. As a high school kid I got a job after
hours repairing radios and TVs *ONLY* because I was a ham. I
got into military electronics, and graduated near the top of
my electronics school class, because I was a ham. Later I
got a GOOD technical job in radio - because I was a ham and
had used that fact to build my resume.

> This is *Amateur* radio, not commercial/professional/broadcast/PCS
> whatever.

Yep. Only a mere shell of its former self.

> The license is NOT a graduation certificate, but rather an entrance
> permit to the hobby/service.

You jokers have regurgitated that tired old bromide until
even the kids at the FCC believe it, now. But Hey, what do
they know, they just work there, right?

If you prefer to view your EXTRA class license as an
"entrance permit" to the hobby, it tells me that you got it
for free. Most of us did not, and DO NOT. The FCC, at least
30 years ago, considered an EXTRA class licensee to be the
only expert class of ham. The fact that he was knowledgeable
enough to score a passing grade on their tests was proof
enough.

Congratulations on changing their minds. Henceforth there
will never be anything other than "entry level" class hams
licensed. And that's exactly where most of them will stay.

Hi Jim,

Sorry, there are no adjustments on the vco. If anything is adjustable,
it sits inside what looks like an enclosed, sealed case which doesn't
look like it was meant ot be opened. Also, the schematic doesn't
really show any user adjustments inside the thing.

> In other words, Passing 5wpm is harder to pass than 13/20 wpm.
> Therefore I must ask you, Did that answer your question or was I not
> reading your question right?

Well, I understand your point, but you may not have tried this yourself. There is a definite 10wpm 'Wall', I am there now. This is caused when you are trying to condition yourself to use the 'sound' of a character to recognize it vs. interpreting a collection of dots and dashes. As the mind fluctuates between modes, you hesitate and start missing characters.

I am earnestly trying for my 13 or 20 wpm, but still think Morse code has zero to do with radio.

Please stop crossposting this to the sat group.

Thanks

It is NOT irrelevant. At least it wasn't a few years back. I know from
personal experience. I was hired at a job once over another candidate,
because in addition to my other qualifications, I had a ham license. I
was told by the hiring manager at the time, that having a ham license
means that you actually "live" this stuff, and don't just look at it as
a 9 to 5 job, which they thought, meant a better employee. This was back
in the days when hams still built alot of their own projects, and the

title of "ham radio operator" was synonomous with "electronic tinkerer" or "freelance engineer".

While a ham license is not a true accreditation, it tells something about the person's goals, and interests and gives the hiring manager some clues as to whether or not the person would make a good technical employee. Of course if you are in a field other than electronics, then it's probably meaningless.

Today, with the preponderance of appliance operators, who really don't know much REAL theory, I would tend to agree that the license no longer stands for much.

I understand that Kenwood has a site with PDFs for virtually all
Kenwood radios. I apologize for not having the URL, but a websearch
should turn it up in short order.

So this guy walks into a bar and says to the bartender "All lawyers
are assholes."

And a guy at the end of the bar says "Hey, I heard that. I resent
that!"

And the first guy says "Why, are you a lawyer?"

And the other guy says "No, I'm an asshole."

Hi,

I bought mine at Texas Towers just
before XMAS for $209.95 - - great
deal!

I like it much. I don't transmit on it much
but listen alot. Have alot of VHF and
UHF public service freq's in the memory...
makes a nice scanner. No intermod
prob's on rx....but I don't live in a
RF-congested area. Aircraft rx is
good except for one problem: weak
signals are unintelligble....don't know
why....but I am not bothered by that.
Any air-band signal lighting up two
or three bars on the "s" meter sound
OK.

I am very happy with the little set. It
has a nice balanced feel to it when
it's in your hand.

I have a complete S-100 desktop box.
It has a Z80 processor at 6MHZ and
64K of ram and dual 8 inch floppies.

It worked the last time I plugged it in.
That was about 15 years ago.
I can't remember the brand.
It was not one of the early famous brand names.

Anyone interested?

One YAESU FT301D with Yaesu Base Mike for sale.
$250 plus I'll include the Yaesu External Matching VFO for free.
It came from the original owner and in working condition or trade for a
VX5r HT or a DualBander 2/440 Mobile.
P.S. I also have an HTX 202 2 meter ht with the matching 30watts Amp
for $120 shipped. E mail at airwavesmith@aol.com

Do we get to see the before /after pix? I can recommend lots of good methods if you are at a loss. A brazing torch can be used to good effect. Also dynamite produces a lovely "shred" effect. Maybe you could mount the pieces on a plate and display as "modern art deco". I'm sure many of the "macho" types will recommend a good sledge hammer. You refuse to identify yourself as a "protest"? Boy, that does a lot of good. Kinda like refusing to change underwear for months at a time, as a protest to washing clothes. The smell is there, but danged if you can tell where it comes from. MK
